that we will not consider an arrangement in which the MA plan meets the CEHRT and quality measures criteria, but pays the APM Entity on a FFS basis, to be an Other Payer Advanced APM because there is no risk connected to actual cost of care exceeding projected cost of care. Because this arrangement would not be an Other Payer Advanced APM, it would not be considered for purposes of QP determinations. In addition, the financial relationship between CMS and the MA plan—even if the relationship is part of an APM—is not relevant to this assessment because there would not be a direct payment arrangement between CMS and the APM Entities or eligible clinicians.

The following is a summary of the comments we received regarding how MA plans will be treated in the Medicare Option and the All-Payer Combination Option.

Comment: Several commenters suggested that eligible MA contracts be compared to the Advanced APM criteria rather than the Other Payer Advanced APM criteria. A few commenters requested that CMS consider MA contracts when determining whether APM Entities are participating in Advanced APMs and include MA payments when calculating Threshold Scores under the Medicare Option. In addition, one commenter stated that focusing the Medicare Option on Part B and not including MA disregards the work of many clinicians to improve care for beneficiaries and to build the accompanying infrastructure required to carry out this work.

Another commenter was concerned that MA participation will not be considered until payment year 2021 and that this could potentially limit eligible clinicians' ability to become QPs because they do not participate in Advanced APMs under Medicare Part B. The commenter expressed concern that this delay will disadvantage clinicians who have already taken the initiative to incorporate quality metrics, financial risk, and CEHRT in their care of beneficiaries.

A few commenters stated that if CMS included MA under the Medicare Option, several high-performing plans would meet the Advanced APM criteria. The commenters stated that

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

CMS could use its section 1115A authority to designate MA plans as Advanced APMs.

Response: We appreciate the comments and suggestions. Under section 1833(z)(2)(A) of the Act, it is clear that MA is not included in the QP determination calculations under the Medicare Option, which requires that we only consider payment amounts or patient counts for Medicare Part B covered professional services. The statute is clear that the All-Payer Combination Option will begin in payment year 2021, for which 2019 is the QP Performance Period as finalized in this rule. We believe that MA plans can play an important role in the Quality Payment Program through the All-Payer Combination Option.

Comment: One commenter recommended that CMS align MIPS and APM measures in traditional Medicare to the CMS MA Five Star Quality Rating System, which measures how well MA and prescription drug (Part D) plans perform in several areas including quality of care and customer service. Another commenter recommended that if an APM Entity's contract with an MA Organization includes "more than nominal risk," and if the MA plan meets a threshold star rating (for example, 4 or greater), patients and payments through that MA plan should be included in the Medicare Option.

Response: Establishing rules related to MA contracting are outside the scope of this rule. An Other Payer Advanced APM must meet all three of the criteria set forth in this final rule with comment. As discussed in this section of the final rule with comment period, the statute does not permit inclusion of MA plans or payments in the Medicare Option, regardless of an MA plan's Star Ratings. Although the Star Rating may reflect positive activities, the statute does not permit any substitute for the Advanced APM or Other Payer Advanced APM criteria.

Therefore, we understand the value of aligning measures across payers. Although measures of health plans are beyond the scope of this rule and do not necessarily measure the same performance as measures used under MIPS and APMs, which relate directly to health care

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

provider performance, we recognize that there are many potential avenues for potential alignment in the selection of the MIPS quality measure set and in the design of specific APMs that engage multiple payers.

Comment: One commenter proposed that information on the Quality Payment Program be made available to MA organizations and easily accessible by the general public. One commenter suggested CMS to use its leadership role in the LAN in order to align incentives, performance measures, and other components of value-based arrangements between public and private payers.

Response: We agree with commenters that continuous communication and engagement are essential to the effective implementation of the Quality Payment Program. We intend to continue our strong emphasis on clinician outreach and education, and will continue to be receptive to new ideas for improving the Quality Payment Program in the future. We believe that the finalized criteria in this final rule with comment are sufficiently clear as to how an MA payment arrangement may become an Other Payer Advanced APM. Apart from defining the statutory criteria, we intentionally do not prescribe unnecessary details in our finalized policies in order to enable significant flexibility in the design of Other Payer Advanced APMs.

Comment: Another commenter supported our proposal to consider MA plans under the All-Payer Combination Option beginning in the 2019 QP Performance Period and believes CMS should consider developing incentives for MA plan participation. One commenter believes that CMS should offer (or seek statutory changes that would allow CMS to offer) provider-affiliated MA plans to create Other Payer Advanced APMs because the commenter believes provider-affiliated MA plans already bear financial risk for care of Medicare beneficiaries. The commenter also believes that CMS should encourage MA plans to offer more APM-like options to the increasing number of MA enrollees, because commenter believes that patients in MA

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

plans should benefit from improved care and payment reforms of APMs.

Response: We appreciate the comments. As we mentioned above, we encourage diversity in Other Payer Advanced APMs, but we do not intend provide additional guidance or incentives in MA contracting as part of our implementation of the Quality Payment Program. We also note that the statute does not provide for special consideration for MA plans or additional or special incentives for the development of or participation in MA plan-operated Other Payer Advanced APMs. In addition, as discussed in a recent Report to Congress entitled, “Alternative Payment Models and Medicare Advantage,” we have limited tools available to encourage Medicare Advantage Organizations (MAOs) to adopt APMs or similar payment arrangements, as the statutory non-interference clause prohibits CMS from interfering in the development of contracts between MAOs and their network providers. We will continue to communicate with stakeholders, including MA plans, before the All-Payer Combination Option takes effect for the performance period in 2019.

Comment: One commenter asked how PACE organizations will align with Other Payer Advanced APMs in the future, particularly as CMS considers options for Other Payer Advanced APMs, which may include MA payment arrangements. Another commenter suggested that CMS model future Advanced APMs after the most successful MA models.

Response: We will evaluate each payment arrangement according to the Other Payer Advanced APM criteria. Again, we encourage diversity in Other Payer Advanced APMs and believe this rule provides flexibility in the design of innovative models.

Comment: Some commenters requested information about how FFS payment adjustments under the Quality Payment Program, including MIPS adjustments and APM Incentive Payments, will impact the benchmark rates that are used to determine our monthly payments to MA plans. These commenters stated that we should address the effects of these

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

adjustments on MA benchmarks before the release of our CY 2019 Advance Notice.

Commenters also stated that CMS should have addressed the impacts of these FFS adjustments in the proposed rule's regulatory impact analysis.

Response: CY 2019 is the first year that the MIPS payment adjustments will impact FFS payments and that the APM Incentive Payment will be made to QPs. We believe that it is more appropriate that we address our methodology for calculating CY 2019 MA benchmarks through the annual Advance Notice and Rate Announcement process, as set forth in section 1853(b) of the Act. Starting in CY 2017, the annual release of our Advance Notice will be followed by a comment period of no fewer than 30 days, which will provide MA organizations with sufficient opportunity to raise any concerns regarding proposed changes to our benchmark calculation methodology. MA rates are set through a separate process, and payment policies for CY 2019 will be addressed in the Advance Notice and Rate Announcement for that program.

#### c. Calculation of All-Payer Combination Option Threshold Score

##### (1) Use of Methods

We may apply one or both of two different methods—using payment amounts or patient counts—to arrive at an eligible clinician's Threshold Score. We would compare the Threshold Score against the relevant QP Threshold or Partial QP Threshold to determine an eligible clinician's QP status for the year.

We proposed that we would calculate Threshold Scores for eligible clinicians in an Advanced APM Entity under both the payment amount and patient count methods for each QP Performance Period. We also proposed that we would assign QP status using the more advantageous of the Advanced APM Entity's two scores.

We believe that both the payment amount and patient count methods should be considered in order to produce Threshold Scores. As the two calculations differ there may be

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

cases in which Threshold Scores vary enough that different QP determinations could result depending on which is used. In such an event, we do not believe that prioritizing the Threshold Score using one calculation over the other would yield an appropriate, non-arbitrary result. By using the greater of the Threshold Scores achieved, we hope to promote simplicity in QP determinations and to maximize the number of eligible clinicians that attain QP status each year. We solicited comment on the use of the payment and patient count methods for the All-Payer Combination Option.

The following is a summary of the comments we received regarding our proposal to calculate the Threshold Score for eligible clinicians participating in Other Payer Advanced APMs by either the payment amount or patient count method.

Comment: One commenter supported CMS' proposal to include and calculate both the revenue and patient count methodologies for QP determination, and use the most advantageous calculation.

Response: We thank the commenter for supporting our proposal. We are finalizing our policy as proposed, and note that the policies for calculating Threshold Scores under the All-Payer Combination Option mirror those for the Medicare Option. Both options use similarly defined numerators and denominators, and both apply the more advantageous result of the two methods for calculating the Threshold Score for purposes of QP determination. Section II.F.6. of this final rule with comment period contains a fuller discussion of the Medicare Option policy.

We are finalizing our proposal to calculate Threshold Scores for eligible clinicians in an APM Entity under both the payment amount and patient count methods for each QP Performance Period. We will make QP determinations using the more advantageous of the APM Entity's two scores.

(2) Excluded Payments

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Section 1833(z)(2)(B)(ii)(I) and (C)(ii)(I) of the Act specifies that the calculation under the All-Payer Combination Option is based on the sum of both payments for Medicare Part B covered professional services and, with certain exceptions, all other payments, regardless of payer. We proposed that we would include such “all other” payments in the numerator and the denominator, and we would exclude payments as specified in the statute. We also proposed to exclude patients associated with these excluded payments from the patient count method.

The statute excludes payments made:

- By the Secretary of Defense for the costs of Department of Defense health care programs;
- By the Secretary of Veterans Affairs for the costs of Department of Veterans Affairs health care programs; and
- Under Title XIX in a state in which no Medicaid Medical Home Model or APM is available under the state plan.

We proposed that title XIX payments or patients would be excluded in the numerator and denominator for the QP determination unless: (1) a state has at least one Medicaid Medical Home Model or Medicaid APM in operation that is determined to be an Other Payer Advanced APM; and (2) the relevant Advanced APM Entity is eligible to participate in at least one of such Other Payer Advanced APMs during the QP Performance Period, regardless of whether the APM Entity actually participates in such Other Payer Advanced APMs. This would apply to both the payment amount and patient count methods. We believe this Medicaid exclusion avoids penalizing eligible clinicians who do not have the possibility of participation in an Other Payer Advanced APM under Medicaid. We believe that failing to exclude such payments and/or patients would unduly disadvantage potential QPs by inflating denominators based on circumstances beyond their control. For example, if a state’s Medicaid Medical Home Model is

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

determined to be an Other Payer Advanced APM and is operated on a statewide basis, Medicaid payments would be included in the denominator for all eligible clinicians in that state assessed under the All-Payer Combination Option. However, if the state operates such an Other Payer Advanced APM at a sub-state level, and eligible clinicians who do not practice in the geographic area where the Medicaid Medical Home Model is available are not eligible to participate, Medicaid payments would not be included in such eligible clinicians' QP calculations. We plan to more fully develop the approach to identify Medicaid Medical Home Models and Medicaid APMs, as well as eligible clinicians participating in them, through subsequent rulemaking.

We solicited comment on our proposals to determine payment exclusions and on how we could account for eligible clinician participation in Medicaid APM or Medicaid Medical Home Models, such as pilots where participation may be intentionally limited by the state.

Comment: One commenter requested that CMS clarify this proposal. Another commenter requested clarification of what "all other payments regardless of payer" means, which establishes the basis for determining the payments in the denominator of the threshold calculations.

Response: "All other payments regardless of payer," described previously in this final rule, means the aggregate of all payments from all payers, except those explicitly excluded by statute.

After considering the public comments, we are finalizing our proposal for determining exclusions of payments in the numerator and denominator for the QP determination without changes. The calculation under the All-Payer Combination Option is based on the sum of both payments for Medicare Part B covered professional services and, with certain exceptions, all other payments, regardless of payer. We will include such "all other" payments in the numerator and the denominator and exclude payments as specified in the statute. We will also exclude patients associated with these excluded payments from the patient count method, as proposed.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

The payments excluded are those made:

- By the Secretary of Defense for the costs of Department of Defense health care

programs;

- By the Secretary of Veterans Affairs for the costs of Department of Veterans Affairs

health care programs; and

- Under Title XIX in a state in which no Medicaid Medical Home Model or APM is

available under the state plan.

### (3) Payment Amount Method

We proposed to calculate an All-Payer Combination Option Threshold Score for eligible clinicians in an Advanced APM Entity using the proposed payment amount method, which would then be compared to the relevant QP Payment Amount Threshold and Partial QP Payment Amount Threshold to make a QP determination.

#### (a) Threshold Score Calculation

##### (i) In General

We proposed to calculate the All-Payer Threshold Score for eligible clinicians in an Advanced APM Entity (or an eligible clinician that participates in multiple APMs, as this exception was discussed in the proposed rule) by dividing the numerator value described under section II.F.7.c.(3)(a)(ii) of this final rule with comment period by the denominator value described under section II.F.7.c.(3)(a)(iii) of this final rule with comment period. This calculation would result in a percent value Threshold Score that we would compare to the QP Payment Amount Threshold and the Partial QP Payment Amount Threshold to determine the QP status of the eligible clinicians for the payment year. The calculations occur in two steps because there is a Medicare QP Threshold and an All-Payer QP Threshold.

##### (ii) Numerator

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

We proposed that the numerator would be the aggregate of all payments from all other payers, except those excluded under sections 1833(z)(2)(B)(ii)(I) and (C)(ii)(I) of the Act, to the Advanced APM Entity’s eligible clinicians—or the eligible clinician in the event of an individual eligible clinician assessment—under the terms of all Other Payer Advanced APMs during the QP Performance Period. Medicare Part B covered professional services will be calculated under the All-Payer Combination Option in the same manner as it will be under the Medicare Option.

(iii) Denominator

We proposed that the denominator would be the aggregate of all payments from all payers, except those excluded under sections 1833(z)(2)(B)(ii)(I) and (C)(ii)(I) of the Act, to the Advanced APM Entity’s eligible clinicians—or the eligible clinician in the event of an individual eligible clinician assessment—during the QP Performance Period. The portion of this amount that relates to Medicare Part B covered professional services will be calculated under the All-Payer Combination Option in the same manner as it is for the Medicare Option.

(b) Examples of Payment Amount Threshold Score Calculation

In this example, an Advanced APM Entity participates in a Medicare ACO initiative, a commercial ACO arrangement, and a Medicaid APM. Each of the APMs is determined to be an Advanced APM. In the QP Performance Period for payment year 2021 (proposed in this proposed rule to be 2019), the Advanced APM Entity receives the following payments:

**TABLE 38: All-Payer Combination Option Example 1**

<b>Payer</b>	<b>Payments through ACO</b>	<b>Total Payments from Applicable Payer</b>	<b>Threshold Score</b>
Medicare*	300,000	1,000,000	30%
Commercial	300,000	500,000	60%
Medicaid	80,000	100,000	80%
Total	680,000	1,600,000	43%

\*For Medicare Part B payments, the amount used for the All-Payer Combination Option will be the same as the amount tied to attribution-eligible beneficiaries used in the denominator of the calculation under the Medicare Option.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

In Table 38, the Advanced APM Entity meets the minimum Medicare threshold (30% > 25%) to be considered under the All-Payer Combination Option. However, it fell short of the QP Payment Amount Threshold (43% < 50%). In this case, the Advanced APM Entity would meet the Partial QP Payment Amount Threshold (43% > 40%).

Another Advanced APM Entity in the same year receives the following payments:

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

**TABLE 39: All-Payer Combination Option Example 2**

<b>Payer</b>	<b>Payments through ACO</b>	<b>Total Payments from Applicable Payer</b>	<b>Threshold Score</b>
Medicare*	200,000	500,000	40%
Commercial	400,000	500,000	80%
Medicaid	100,000	150,000	67%
Total	700,000	1,150,000	61%

\*For Medicare Part B payments, the amount used for the All-Payer Combination Option will be the same as the amount tied to attribution-eligible beneficiaries used in the denominator of the calculation under the Medicare Option.

In Table 39, the Advanced APM Entity meets the minimum Medicare threshold (40% > 25%) to be considered under the All-Payer Combination Option. It also exceeds the QP Payment Amount Threshold (61% > 50%). In this case, the eligible clinicians in the Advanced APM Entity would become QPs.

We solicited comment on the payment amount method described in this proposal and any potential alternative approaches.

The following is a summary of the comments we received regarding our payment amount method proposal.

Comment: One commenter supported our proposal for using the payment amount method to calculate the All-Payer Combination Option Threshold Score. Another commenter supported the definition of the numerator because if a beneficiary is attributed to an ACO and sees a clinician outside that ACO, payments made to the non-ACO clinician will not count towards this numerator, even if the ACO is in an Other Payer Advanced APM.

An additional commenter requested more details around how the data for the Threshold Score numerator and denominator under the All-Payer Combination Option would be collected and calculated. One commenter requested clarification as to whether 100 percent of a clinician's qualifying risk-based payments for Medicaid services from an Other Payer Advanced APM would be eligible to count towards the All Payer Combination Option.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Response: We appreciate the comments. The collection and submission of data is described in section II.F.7.d. of this final rule with comment period, and we seek further comments on that topic. All of the payments an eligible clinician receives through an Other Payer Advanced APM, except for those excluded as detailed above, will count in the numerator of the Threshold Score.

We are finalizing our proposal to calculate the All-Payer Combination Option Threshold Score for eligible clinicians in an Advanced APM Entity (or an eligible clinician that participates in multiple APMs) by dividing the numerator by the denominator value, as described above. This calculation will result in a percent value Threshold Score that we would compare to the QP Payment Amount Threshold and the Partial QP Payment Amount Threshold to determine the QP status of the eligible clinicians for the payment year. The calculations occur in two steps because there is a Medicare QP Threshold and an All-Payer QP Threshold. We are finalizing our proposal that the numerator is the aggregate of all payments from all other payers, except those excluded under sections 1833(z)(2)(B)(ii)(I) and (C)(ii)(I) of the Act, to the Advanced APM Entity's eligible clinicians—or the eligible clinician in the event of an individual eligible clinician assessment—under the terms of all Other Payer Advanced APMs during the QP Performance Period.

We are finalizing our proposal that the denominator is the aggregate of all payments from all payers, except those excluded under sections 1833(z)(2)(B)(ii)(I) and (C)(ii)(I) of the Act, to the Advanced APM Entity's eligible clinicians—or the eligible clinician in the event of an individual eligible clinician assessment—during the QP Performance Period.

#### (4) Patient Count Method

We proposed to calculate a Threshold Score for the eligible clinician group in an Advanced APM Entity—or eligible clinician in the exception situations under sections II.F.5 and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

II.F.6 of the proposed rule—using the patient count method, which would then be compared against the relevant QP Patient Count Threshold and Partial QP Patient Count Threshold to determine the QP status of an eligible clinician for the year based on the higher of the two values.

(a) Threshold Score Calculation

(i) In General

We proposed that the Threshold Score calculation for the patient count method would include patients for whom the eligible clinicians in an Advanced APM Entity furnish services and receive payment under the terms of an Other Payer Advanced APM, with certain exceptions as outlined in the previous section. This calculation would result in a percent value Threshold Score that CMS would compare to the QP Patient Count Threshold and the Partial QP Patient Count Threshold to determine the eligible clinicians' QP status for the payment year. The calculations occur in two steps as there is a Medicare Threshold requirement and an All-Payer Threshold requirement.

(ii) Unique Patients

First, we proposed that, like the Medicare Option, the patient count method under the All-Payer Combination Option would only count unique patients, with multiple eligible clinicians able to count the same patient. Similarly, we proposed to count a single patient, where appropriate, in the numerator and denominator for multiple different Advanced APM Entities when counting the number of beneficiaries under this method section II.F.6 of the proposed rule. We also proposed that we would not count any patient more than once for any single Advanced APM Entity. In other words, for each Advanced APM Entity, we would count each unique patient one time in the numerator, and one time in the denominator.

We believe that counting patients this way maintains integrity by preventing double

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

counting of patients within an Advanced APM Entity while recognizing the reality that patients often have relationships with eligible clinicians in different organizations. We expect to avoid distorting patient counts for such overlap situations, especially in Advanced APM Entity-dense markets.

We solicited comment on our proposal for counting unique patients for the patient count method.

(iii) Numerator

We proposed that the numerator would be the number of unique patients to whom eligible clinicians in the Advanced APM Entity furnish services that are included in the measures of aggregate expenditures used under the terms of all of their Other Payer Advanced APMs during the QP Performance Period, plus the patient count numerator for Advanced APMs. A patient would count in the non-Medicare portion of this numerator only if, as stated in the proposed rule, the eligible clinician furnishes services to the patient and receives payment(s) for furnishing those services under the terms of an Other Payer Advanced APM.

(iv) Denominator

We proposed that the denominator would be the number of unique patients to whom eligible clinicians in the Advanced APM Entity furnish services under all non-excluded payers during the QP Performance Period.

(b) Examples of Patient Count Threshold Score Calculation

In the QP Performance Period for payment year 2021 the Advanced APM Entity experienced the following patient counts:

**TABLE 40: All-Payer Combination Option Example 3**

<b>Payer</b>	<b>Patients through ACO</b>	<b>Total Patients from Payer</b>	<b>Threshold Score</b>
Medicare*	3,000	10,000	30%
Commercial	1,000	5,000	20%

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

<b>Payer</b>	<b>Patients through ACO</b>	<b>Total Patients from Payer</b>	<b>Threshold Score</b>
Medicaid	800	1,000	80%
Total	4,800	16,000	30%

\*For Medicare Part B patients, the amount used for the All-Payer Combination Option will be the same as the number of attribution-eligible beneficiaries used in the denominator of the calculation under the Medicare Option.

In Table 40, the Advanced APM Entity meets the minimum Medicare threshold (30% > 20%) to be considered under the All-Payer Combination Option. However, it fell short of the QP Patient Count Threshold (30% < 35%). In this case, the Advanced APM Entity would meet the Partial QP Patient Count Threshold (30% > 25%).

Another Advanced APM Entity in the same year experienced the following patient counts:

**TABLE 41: All-Payer Combination Option Example 4**

<b>Payer</b>	<b>Patients through ACO</b>	<b>Total Patients from Payer</b>	<b>Threshold Score</b>
Medicare*	2,000	5,000	40%
Commercial	4,000	5,000	80%
Medicaid	1,000	1,500	67%
Total	7,000	11,500	61%

\*For Medicare Part B patients, the amount used for the All-Payer Combination Option will be the same as the number of attribution-eligible beneficiaries used in the denominator of the calculation under the Medicare Option.

In Table 41, the Advanced APM Entity meets the minimum Medicare threshold (40% > 20%) to be considered under the All-Payer Combination Option. It also exceeds the minimum QP Patient Count Threshold (61% > 35%). In this case, the eligible clinicians in the Advanced APM Entity would become QPs.

We solicited comment on the patient count method described above and any potential alternative approaches.

We received no comments in response to our proposed patient count method. Section II.F.6.(c) of this final rule with comment has a detailed discussion of comments on this policy as it pertains to the Medicare Option.

We are finalizing our proposal to calculate the All-Payer Combination Option Threshold

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Score for eligible clinicians in an Advanced APM Entity (or an eligible clinician that participates in multiple APMs) by dividing the numerator by the denominator value, as described above. This calculation will result in a percent value Threshold Score that we would compare to the QP Patient Count Threshold and the Partial QP Patient Count Threshold to determine the QP status of the eligible clinicians for the payment year. The calculations occur in two steps because there is a Medicare QP threshold and an All-Payer QP threshold. We are finalizing our proposal that the numerator is the number of unique patients to whom eligible clinicians in the Advanced APM Entity furnish services that are included in the measures of aggregate expenditures used under the terms of all of their Other Payer Advanced APMs during the QP Performance Period, plus the patient count numerator for Advanced APMs.

We are finalizing our proposal that the denominator is the number of unique patients to whom eligible clinicians in the Advanced APM Entity furnish services under all non-excluded payers during the QP Performance Period.

#### d. Submission of Information for Assessment under the All-Payer Combination Threshold Option

Under sections 1833(z)(2)(B)(ii)(III) and (C)(ii)(III) of the Act, an eligible clinician can only become a QP using the All-Payer Combination Option by providing the Secretary such information as is necessary for the Secretary to determine whether a payment arrangement is an Other Payer Advanced APM and to determine the eligible clinician's Threshold Score.

We have the necessary data to make QP determinations and an APM Incentive Payments for Advanced APMs because they are administered within the Medicare program. Because Other Payer Advanced APMs are administered outside of the Medicare program, CMS needs to collect analogous data from specific sources who have that data to make QP determinations and APM Incentive Payments to those participating in Other Payer Advanced APMs. In order for CMS to

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

perform QP determinations using the All-Payer Combination Option, submissions must include specific payment and patient numbers for each payer from whom the eligible clinician has received payments during the QP Performance Period.

We proposed that APM Entities or individual eligible clinicians must submit by a date and in a manner determined by us: (1) payment arrangement information necessary to assess whether each payment arrangement is an Other Payer Advanced APM, including information on financial risk arrangements, use of certified EHR technology, and payment based on quality measures; and (2) for each payment arrangement, the amounts of revenues for services furnished through the arrangement, the total revenues from the payer, the numbers of patients furnished any service through the arrangement (that is, patients for whom the eligible clinician is at risk if actual expenditures exceed expected expenditures), and (3) the total number of patients furnished any service through the payer.

If we do not receive sufficient information to complete our evaluation of all other payer arrangements to perform the QP threshold calculation, we would not evaluate the eligible clinicians under the All-Payer Combination Option. If sufficient information is submitted, we would then assess the characteristics of the other payer arrangement to determine if it is an Other Payer Advanced APM and would notify the APM Entities and/or eligible clinicians of the Other Payer Advanced APM determinations based on their submissions. Because we proposed that an Other Payer Advanced APM is required to have an outcome measure, we propose that if an Other Payer Advanced APM has no outcome measure, the Advanced APM Entity must attest that there is no applicable outcome measure on the MIPS list. We intend to establish specific requirements regarding the timing and manner of submission of such information through future rulemaking.

We proposed that each payer attest to the accuracy of all submitted information including

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

the reported payment and patient data. We proposed that if a payer does not attest to the accuracy of the reported payment and patient data, these data would not be assessed under the All-Payer Combination Option. However, we recognize that such a requirement leaves eligible clinicians dependent on a payer over which they may have limited control. We therefore solicited comment on alternatives to requiring payer attestation, such as addressing the scope and intensity of audits to verify the submitted data. For APM Entities and eligible clinicians participating in Medicaid, we would initiate a review and determine in advance of the QP Performance Period the existence of Medicaid Medical Home Models and Medicaid APMs based on information obtained from state Medicaid agencies and other authorities, such as professional organizations or research entities.

We solicited comment from stakeholders on the specific types of payment arrangement information that would be necessary to assess whether payment arrangement is an Other Payer Advanced APM, and the format in which we could reasonably expect to receive this information. We solicited comment on the level of detail which we should require, and whether certain pieces of information would be most easily submitted directly from individual eligible clinicians or from an APM Entity. We also solicited comment on the timing of when we could expect to receive this information from individual eligible clinicians and APM Entities for a performance year. In addition, we solicited comment on the proposed requirement that an Other Payer Advanced APM must have an outcome measure.

We solicited comment on the possibility of receiving information on Other Payer Advanced APMs and their participants directly from other payers in order to minimize reporting burden for APM Entities and eligible clinicians. We solicited comment on the extent to which collecting voluntary submissions of data from other payers could reduce burden and increase program integrity through more accurate determinations of QP status based on payment or

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

patient threshold calculations for Other Payer Advanced APMs. Likewise, we solicited comment on the extent to which such data collection is operationally feasible or could infringe upon other payers' interests in maintaining the confidentiality of their business practices.

In addition, we proposed to make early Other Payer Advanced APM determinations on other payer arrangements if sufficient information is submitted at least 60 days before the beginning of a QP Performance Period. This would allow us to offer eligible clinicians advance notice of their prospects of achieving QP status in the event they are assessed under the All-Payer Combination Option. This early determination would be considered final for the QP Performance Period based on the payment arrangement information submitted. If new information is submitted based on a change in the payment arrangement during the QP Performance Period, the initial determination could be subject to review and revision. We also proposed that, to the extent permitted by federal law, we would maintain confidentiality of certain information that the APM Entities and/or eligible clinicians submit regarding Other Payer Advanced APM status to avoid dissemination of potentially sensitive contractual information or trade secrets. We proposed that, unlike our proposal for Advanced APM determinations, the Other Payer Advanced APM determinations would be made available directly to participating APM Entities and eligible clinicians rather than through public notice, and we would explain how and within what timeframes such notifications will occur in subregulatory guidance. We may consider publicly releasing information on Other Payer Advanced APMs on the CMS website with general and/or aggregate information on the payers involved and the scopes of such agreements.

We solicited comment on the proposed timing and method of feedback to APM Entities and eligible clinicians regarding the status of Other Payer Advanced APMs for which they have submitted information and on the proposed early determination process and the ability of APM

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Entities and eligible clinicians to submit sufficient information prior to the beginning of a QP Performance Period. We also solicited comment on the types of information that contain potentially sensitive information.

The information submitted to determine whether an eligible clinician is a QP under the All-Payer Combination Option may be subject to audit, and eligible clinicians and APM Entities will be required to maintain copies of any supporting documentation. If an audit reveals a material discrepancy in the information submitted to us, and such discrepancy affected the eligible clinician's QP status, the APM Incentive Payment may be recouped. Providing false information may reflect a false claim subject to investigation and prosecution. We may provide further details on the audit and recoupment process under the All-Payer Combination Option in future rulemaking.

The following is a summary of the comments we received regarding our proposal to require APM Entities or eligible clinicians to submit information regarding their payment arrangements in order to be assessed under the All-Payer Combination Option.

Comment: We received several comments on the requirements for submission of information. Many commenters suggested CMS to be mindful of the need to limit potential burden on clinicians and APM entities to collect information for calculation of the All-Payer Combination Option. Many commenters expressed concern that the validation process will be burdensome for both eligible clinicians and payers and requested CMS keep an open dialogue with all involved parties to design a process that is administratively feasible. Several commenters requested that the requirements for data requests be very specific and limited to protect sensitive and proprietary information, and that the process have safeguards in place to protect data.

Several commenters expressed concern or opposition to CMS requiring APM Entities

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

and eligible clinicians to submit information for CMS to assess whether other payer arrangements meet the Other Payer Advanced APM criteria. Some of these commenters stated that payers should be required to submit the information because clinicians may not have the necessary information readily available. One of these commenters stated that, in order to ensure that plans and clinicians can continue to focus on delivering high-quality care, CMS should minimize the reporting required under the All-Payer Combination Option. Another commenter expressed concern that eligible clinicians could be reluctant to share their non-Medicare payment information with CMS. One commenter opposed CMS requiring eligible clinicians to submit the entirety of a contract with another payer, particularly sections including negotiated fee schedule or payment rates.

Response: We appreciate the comments. We understand that both eligible clinicians and payers are concerned with which parties will be responsible for the submission of information, the timing and method of submission, and who will be held accountable for the accuracy of the information submitted. We intend to implement a process that requires reporting the least amount of information needed to determine participation in Other Payer Advanced APMs and calculate Threshold Scores while ensuring the integrity of the program. Because these provisions of the statute will not be implemented until the 2019 QP Performance Period, we are seeking additional comments on these information submission requirements.

Comment: Some commenters opposed requiring payers to verify or attest to the data being submitted by APM Entities or eligible clinicians. These commenters expressed that the task would be burdensome and that APM Entities or eligible clinicians should be responsible for all reporting requirements. One commenter stated some private payers have no relationship with CMS and the attestation would be a burden to establish. Several commenters believe the proposed rule provided insufficient detail regarding payer responsibility and recommended that

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

CMS clearly explain payer responsibilities and expectations with regard to attestation of payment arrangements with physicians. One commenter stated that, as currently written, this provision of the proposed rule could include disclosure of proprietary contracting information that CMS does not have authority to collect. This may violate the contractual limitations between the payer and clinician. The same commenter said that without any appropriate guidance that set parameters around this requirement, operational implementation is likely to be overly burdensome. One commenter requested CMS strike this requirement from the final rule and instead include a criteria checklist in the attestation. One commenter recommended CMS minimize administrative burdens for eligible clinicians to demonstrate their participation with these payers and looked forward to submitting more detailed comments when CMS proposes more specifics for how data will be handled and calculations will be made under the All-Payer Combination Option.

Response: We appreciate the comments. We believe payer involvement in attesting to the accuracy of data submitted is essential to the integrity of the program. We do not believe the process poses an unreasonable burden, even for private payers who have no relationship with CMS. We intend to put in place guidelines that will ensure proprietary information is not disclosed. We seek additional comments on the process for submitting information.

Comment: Several commenters recommended that CMS have a conversation with multiple stakeholders regarding how information will be submitted to CMS. Several commenters also suggested that CMS establish the detailed reporting requirements through a formal rulemaking process with an opportunity for interested parties to provide feedback on the requirements. Two commenters suggested that, rather than attend to the details through subregulatory guidance, CMS should include a thorough proposal in the CY 2018 PFS.

One commenter recommended that CMS should consider the same approach for Other Payer Advanced APMs that is used for Medicare Advantage plans. However, the commenter

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

suggested that if CMS believes a different standard should apply to MA plans because of their contractual relationship with CMS, then CMS should apply the reasonableness standard that is enforced through the Medicare Advantage program in which a health plan would acknowledge, to the best of its knowledge, information, and belief, that the reported payment and patient counts were accurate. The commenter recommended that CMS apply this standard in a way that minimizes the reporting burden on MA plans. Another commenter encouraged CMS to consider establishing a data submission process that would allow MA plans to submit data on their arrangements in lieu of attestation. One commenter requested more detailed requirements for MA contracts and an explanation for how ACOs can attest to participating in such contracts.

Another commenter recommended CMS to consider expanding the third-party data partners to include state all-payer claims databases (APCDs) as a data submitter for those payment arrangement electing to utilize the state aggregator for reporting. This option would also have the potential to enhance the analytic opportunities for the APM Entity to work with the APCD to implement analytic tools and data products that benefit the patient population and the APM Entity beyond Medicare reporting requirements.

Response: We appreciate the comments and suggestions. We do intend to consult further with stakeholders about the process for submitting information. We will consider existing reporting rules and attestations with payers, such as MA plans, and adopt similar ones where appropriate. We intend to use future rulemaking to potentially make changes to our approach.

After considering the public comments, we are finalizing our proposed information submission requirements with no changes, but seek further comments on the process for submitting information. APM Entities or individual eligible clinicians must submit by a date and in a manner determined by CMS: (1) payment arrangement information necessary to assess

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

whether each payment arrangement is an Other Payer Advanced APM, including information on financial risk arrangements, use of certified EHR technology, and payment tied to quality measures; and (2) for each payment arrangement, the amounts of payments for services furnished through the arrangement, the total payments from the payer, the numbers of patients furnished any service through the arrangement (that is, patients for whom the eligible clinician is at risk if actual expenditures exceed expected expenditures), and (3) the total numbers of patients furnished any service through the payer.

We are also finalizing our proposal that each payer attest to the accuracy of all submitted information including the reported payment and patient data. We proposed that if a payer does not attest to the accuracy of the reported payment and patient data, these data would not be assessed under the All-Payer Combination Option. We note that while we cannot require other payers to submit information, we could only be confident in the accuracy of information eligible clinicians submitted to us—and use such information in the All-Payer Combination Option—if other payers attest to the accuracy of that information.

## 8. APM Incentive Payment

The APM Incentive Payment is specified under section 1833(z)(1) of the Act.

### a. Amount of the APM Incentive Payment

This section describes our proposal for calculating the amount of the APM Incentive Payment and accounts for the specific scenarios outlined under sections 1833(z)(1)(A)(i) and 1833(z)(1)(A)(ii) of the Act. This section also describes the process by which we proposed to disburse these APM Incentive Payments to QPs.

In accordance with section 1833(z)(1)(A) of the Act, we would make an APM Incentive Payment for a year to eligible clinicians that achieve QP status for the year during years 2019 through 2024. In accordance with the statute, we proposed that this APM Incentive Payment

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

must be equal to 5 percent of the estimated aggregate amounts paid for Medicare Part B covered professional services furnished by the eligible clinician from the preceding year across all billing TINs associated with the QP's NPI.

The following is a summary of the comments we received in response to our proposals regarding the amount of the APM Incentive Payment.

Comment: One commenter recommended that CMS delay the expiration of the APM Incentive Payment until eligible clinicians have meaningful opportunities to participate in an Advanced APM, specifically Advanced APMs that promote access to advanced illness and palliative care. The commenter noted that developing and implementing such a new Advanced APM would take time and investment.

Response: The years for which the APM Incentive Payment is in effect are specified under section 1833(z)(1) of the Act. We do not believe we have authority to extend availability of the five percent APM Incentive Payment beyond the statutory timeframe. Additionally, we remind readers that after the APM Incentive Payments expire, QPs will continue to be excluded from MIPS reporting requirements and payment adjustments for each year that they meet the QP Thresholds. Additionally, beginning in 2026, QPs will receive a differential, higher PFS update each year.

Comment: Several commenters suggested that CMS include payments made under MA plans when calculating the 5 percent APM Incentive Payment. We also received one comment suggesting that CMS include payments made under the FQHC PPS and the RHC AIR when calculating the 5 percent APM Incentive Payment.

Response: We thank commenters for their suggestions regarding the inclusion of payments made under Medicare Advantage, the FQHC PPS, and the RHC AIR plans when calculating the estimated aggregate payments made to eligible clinicians. However, section

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

1833(z)(1) of the Act stipulates that the APM Incentive Payment be equal to 5 percent of the estimated aggregate amounts paid only for Medicare Part B covered professional services, which do not include Medicare Advantage, FQHC PPS, and RHC AIR payments.

Comment: One commenter requested clarification on how Medicare crossover payments would be taken into consideration for calculating the APM Incentive Payment.

Response: A Medicare crossover claim occurs when Medicare is the primary payer for a beneficiary that has supplemental insurance coverage, including Medicaid. Under the crossover payment process, after the Medicare claim is adjudicated, the Medicare Administrative Contractor automatically sends the adjudicated claim to the designated insurer for payment. Medicare payments made under this process that are for Part B covered professional services will be included in our calculations when determining QP Thresholds using the Medicare Option and will also be included in the amount of the APM Incentive Payment.

Comment: One commenter expressed concern that a 5 percent bonus on Part B payments may not be enough of an incentive to offset taking on risk for both Parts A and B expenditures for aligned beneficiaries, as is done in ACO initiatives with downside risk. Another commenter recommended that we set the APM Incentive Payment amounts to be at least the same amount as the maximum allowable MIPS bonus with the intent of further increasing participation in Advanced APMs. One commenter supported our belief that the APM Incentive Payment is based on participation in an Advanced APM, and is not based on performance in the APM. Conversely, we also received a comment that expressed concern for paying eligible clinicians a 5 percent incentive to participate in Advanced APMs that are not supported by strong evidence of success in controlling cost or improving quality, or both. The commenter stated that APM Incentive Payments should be provided only for those eligible clinicians in APM Entities proven to improve value for beneficiaries. The commenter believes that the relationship between

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

guaranteed additional payment and payment at risk must be substantial enough so that eligible clinicians are motivated to improve their care processes and reduce unnecessary utilization.

Response: We note that section 1833(z)(1) of the Act stipulates that the APM Incentive Payment be equal to 5 percent of the estimated aggregate amounts paid for Medicare Part B covered professional services. Likewise, as stated in section II.F.1. of this final rule with comment period, we believe that the process for determining whether an eligible clinician is a QP and receives the APM Incentive Payment should focus on the relative degree of participation by eligible clinicians in Advanced APMs, not on their performance within the APM. The Quality Payment Program does not alter how each particular APM, or Advanced APM, measures and rewards success within its design. Rather, it rewards a substantial degree of participation in Advanced APMs.

Comment: We received one comment in support of our proposal that the amount of APM Incentive Payment be calculated across all billing TINs associated with the QP's NPI.

Response: We thank commenters for their feedback and support of this proposal.

Comment: One commenter requested feedback on how we would calculate the APM Incentive Payment if an APM Entity contract ends during the incentive payment base period.

Response: QP Threshold Scores and APM Incentive Payments are calculated based on the data that CMS has available at the time of the calculations. We reiterate that our proposal is to calculate the APM Incentive Payment across all billing TINs during the incentive payment base period, which we are finalizing to be the calendar year preceding the payment year. As an example, using 2017 as the performance period for the 2019 payment year, we would calculate the amount of the APM Incentive Payment based on payments during CY 2018. Even if an APM Entity contract involving the QP ends during CY 2018, we would still base the amount of the APM Incentive Payment across all of a QP's billing TINs during the incentive payment base

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

period.

After considering public comments, we are finalizing our proposals regarding the calculation of the amount of the APM Incentive Payment as required by section 1833(z)(1)(A) of the Act. Specifically, we finalize our proposals that APM Incentive Payments will be made to eligible clinicians who are determined to be QPs during years 2019 through 2024. In accordance with the statute, we are finalizing our proposal that this APM Incentive Payment must be equal to 5 percent of the estimated aggregate payment amounts for Medicare Part B covered professional services furnished by the QP during the preceding year across all billing TINs associated with the QP's NPI.

#### (1) Incentive Payment Base Period

The incentive payment base period is the range of dates that would be used to calculate the estimated aggregate payment amounts for the year preceding the QP payment year that would serve as the basis for the incentive payment. Section 1833(z)(1)(A) of the Act states that in calculating the amount that is equal to 5 percent of the estimated aggregate payment amounts for Medicare Part B covered professional services under this part for the preceding year, the payment amount for the preceding year may be an estimation for the full preceding year based on a period of such preceding year that is less than the full year. We believe this provision provides flexibility in determining the incentive payment base period. We proposed to use the full calendar year prior to the payment year as the incentive payment base period from which to calculate the estimated aggregated payment amounts.

Using a complete calendar year of claims would allow for the most accurate representation of the covered professional services delivered by each eligible clinician, which we believe outweighs a modest potential delay in making the APM Incentive Payment. We solicited comment on our proposal to use the entire preceding calendar year as the incentive payment base

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

period.

The following is a summary of the comments we received in response to our proposal pertaining to the APM incentive payment base period.

Comment: Several commenters supported our proposal to use the entire calendar year prior to the incentive payment year when calculating the amount of APM Incentive Payment.

Response: We appreciate commenters' feedback and support of our proposal.

Comment: One commenter suggested that we calculate the APM Incentive Payment based on the number of months an NPI was participating in an Advanced APM.

Response: We appreciate this commenter's feedback. However, we disagree that the amount of APM Incentive Payment should only be based on the number of months of participation in an Advanced APM. Not only would this potentially conflict with our policies setting the QP Performance Period and the incentive payment base period, but the statute provides that the APM Incentive Payment is based on estimated aggregate payment amounts for the entire "preceding year."

After considering public comments, we are finalizing our proposal that the incentive payment base period is the full calendar year prior to the payment year.

## (2) Timeframe of Claims

Section 1833(z)(1)(A) of the Act directs us to make the APM Incentive Payment in a lump sum on an annual basis "as soon as practicable." We believe that, in implementing this provision, it is important to balance the desire for accuracy in the data used to calculate the APM Incentive Payment with the desire to expedite the payments so that the APM Incentive Payments are made in an appropriate and timely manner.

We proposed to calculate the APM Incentive Payment based on data available 3 months after the end of the incentive payment base period in order to allow time for claims to be

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

processed. For example, for the 2019 payment year, we would capture claims submitted with dates of service from January 1, 2018 through December 31, 2018 and processing dates of January 1, 2018 through March 31, 2019. We believe that 3 months of claims run-out is sufficient to conduct the APM Incentive Payment calculations in an accurate and timely manner. This methodology is consistent with the claims run-out timeframes used for reconciliation payments in several current APMs, such as the Shared Savings Program, the Pioneer and Next Generation ACO Models, and the CEC model. We solicited comment on the potential use of a completion factor. We note that several current APMs apply the 3-month claims run-out in conjunction with a completion factor. However, where a completion factor may be appropriate for payments based on claims submitted by groups of providers and suppliers that may be billing under multiple TINs, we believe that with payments based on individual eligible clinician claims, categorical variability in claims completion across types of eligible clinicians would cause inequitable results.

In summary, for the incentive payment base period we proposed to use a complete calendar year of claims with 3 months of claims run-out from the end of the calendar year. We believe our proposed approach balances our goals of providing incentive payments in a reasonable timeframe while being able to account for the vast majority (on average, 99.3 percent of claims for) covered professional services. Given these parameters, we estimated that APM Incentive Payments could be made approximately 6 months after the end of the incentive payment base period, or roughly mid-way through the payment year. However, we proposed that the APM Incentive Payment would be made no later than 1 year from end of the incentive payment base period. We did not propose to set a specific deadline mid-way during the payment year because we believe doing so could pose operational risks in the event that 6 months is impracticable in a given year for reasons that CMS cannot predict. We solicited comment on our

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

proposed timing for when we will make the APM Incentive Payment during a payment year.

The following is a summary of the comments we received regarding our proposals for using 3 months of claims run-out when calculating the APM Incentive Payment and for the timing of making the APM Incentive Payment.

Comment: Several commenters supported our proposal to use 3 months of claims run-out when calculating the APM Incentive Payment. Some commenters noted that additional run-out time is unlikely to yield more meaningful data and that further lag time may dilute the impact or incentive to eligible clinicians in receiving the APM Incentive Payment.

Response: We agree that 3 months of claims run-out will allow us to make accurate APM Incentive Payment calculations without diluting the impact or incentives to QPs receiving APM Incentive Payments.

Comment: Several commenters opposed our proposal to not specify a specific date during CY 2019 to make the APM Incentive Payment. Many of those commenters stated that CMS should be able to commit to making the APM Incentive Payment before the end of the payment year. The majority of commenters stated that CMS should identify a shorter and more defined period for eligible clinicians to receive their APM Incentive Payment and that a shorter, more defined period would encourage Advanced APM participation. Other commenters stated that too much lag time in making the APM Incentive Payment may negatively impact financial operations for, and subsequent-year quality performance of, entities that operate under risk-adjusted financial arrangements. One commenter suggested that we align the APM Incentive Payment with the shared savings payment from the Shared Savings Program.

Response: We note that under section 1833(z)(1)(B) of the Act we are required to make the APM Incentive Payment “as soon as practicable.” We recognize the importance of the APM Incentive Payment and we believe that accuracy of the APM Incentive Payment is of the utmost

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

importance under the Quality Payment Program. An accurate APM Incentive Payment will maintain and encourage participation in Advanced APMs. While we estimate that the APM Incentive Payment could be made approximately mid-way through the payment year, we reserve the right to take additional time to calculate the APM Incentive Payment if necessary.

After considering public comments, we are finalizing our proposal to use 3 months of claims run-out when calculating the amount of APM Incentive Payment, and we are finalizing our proposal to make the APM Incentive Payment no later than 1 year from end of the incentive payment base period.

### (3) Treatment of Payment Adjustments in Calculating the Amount of APM Incentive Payment

Part B covered professional services under the Medicare PFS are currently subject to several statutory provisions that are geared towards improving quality and efficiency in service delivery. Eligible clinicians are subject to payment adjustments under the Medicare EHR Incentive Program for Eligible Professionals (MU), the PQRS, and the VM. Beginning in 2019, the MIPS adjustment, as described in section II.E.5. of the final rule, will replace payment adjustments under the MU, PQRS, and VM for all MIPS eligible clinicians. These special payment adjustments directly adjust the payment amount that eligible clinicians receive under the PFS. In contrast, we consider the APM Incentive Payment to be separate from, and, as indicated under section 1833(z)(1)(A) of the Act, in addition to the amount of payments made for covered professional services under the Medicare PFS.

We proposed to exclude the MIPS, VM, MU and PQRS payment adjustments when calculating the estimated aggregate payment amount for covered professional services upon which to base the APM Incentive Payment amount. For example, a QP who receives an upward fee adjustment during 2018 in VM would not see that adjustment reflected in the estimated aggregate payment amount for covered professional services used to calculate his or her APM

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Incentive Payment in 2019. Similarly, a QP who receives a downward fee adjustment during 2018 in VM would not see that amount reflected in the aggregate payment amount for the APM Incentive Payment.

We believed this proposed policy is most consistent with the specification in section 1833(z)(1)(A) of the Act that the APM Incentive Payment is based on the estimated aggregate payment amounts for “such” covered professional services for the preceding year, which refers to the Part B covered professional services furnished by the particular eligible clinician.

While we considered the alternative of including these performance-related payment adjustments in calculating the APM Incentive Payment, we were concerned that such a policy would create incentives that are not aligned with the intent of the APM Incentive Payment. As previously stated in our policy principles, we believe that the APM Incentive Payment is best viewed as a complementary reward for eligible clinicians that have a substantial degree of participation in the most advanced APMs, not an evaluation of their performance within the APM or in another statutorily required performance-based payment adjustment.

We also proposed in section II.F.6.b.(1) of the proposed rule to account for payment adjustments in the QP determination process in the same manner as when calculating the amount of the APM Incentive Payment. If we were to include statutory payment adjustments when determining QP status, there could be situations where an eligible clinician could become a QP because of a positive payment adjustment amount, or conversely, there could be situations where an eligible clinician would not meet the QP threshold because of a negative payment adjustment. We believe that our proposal to not include payment adjustments when determining QP status for a year, or when calculating the amount of the APM Incentive Payment, allows us to assess all eligible clinicians on the same merits throughout the entire QP determination and when calculating the APM Incentive Payment. We do not believe the intent of the statute was to

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

enhance or negate an eligible clinician's opportunity to become a QP in a given performance year, or to enhance or negate the amount of APM Incentive Payment a QP receives, based on factors that are extraneous to APM participation.

We solicited comment on this proposed approach to coordinating the various PFS payment adjustments when calculating the amount of the APM Incentive Payment.

The following is a summary of the comments we received regarding our proposals for how to treat PFS payment adjustments when calculating the amount of the APM Incentive Payment.

Comment: Several commenters expressed support for our proposal to exclude the MIPS, VM, MU, and PQRS payment adjustments when calculating the estimated aggregate payment amount for covered professional services upon which to base the APM Incentive Payment amount. All commenters who responded to this proposal agreed with our belief that the intent of the APM Incentive Payment is not to further magnify existing and future payment adjustments.

Response: We thank commenters for their feedback.

After considering public comments, we are finalizing our proposal to exclude the MIPS, VM, MU and PQRS payment adjustments when calculating the estimated aggregate payment amount for covered professional services upon which to base the APM Incentive Payment amount.

#### (4) Treatment of Payments for Services Paid on a Basis Other Than Fee-For-Service

We recognize that many APMs use incentives and financial arrangements that differ from usual fee schedule payments. Section 1833(z)(1)(A)(i) of the Act requires us to establish policies for payments that are made to an Advanced APM Entity rather than directly to the QP. Section 1833(z)(1)(A)(ii) of the Act requires us to establish policies for when payment is made on a basis other than FFS. For the purposes of this rule, we place such payments into three categories:

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

financial risk payments, supplemental service payments, and cash flow mechanisms. We also recognize that payment methods and financial arrangements may evolve over time and those would need to be addressed in future rulemaking. We solicited comment on the proposals for accounting for risk-based payments, supplemental service payments, and cash flow mechanisms when calculating the amount of APM Incentive Payment.

(a) Financial Risk Payments

Financial risk payments are non-claims-based payments based on performance in an APM when an APM Entity assumes responsibility for the cost of a beneficiary's care, whether it be for an entire performance year, or for a shorter duration of time, such as over the course of a defined episode of care. We note that in the context of categorizing these types of payments as "financial risk payments," we refer to payments that may be based on the cost of a beneficiary's care and do not necessarily limit these payments to financial arrangements that would require an APM Entity to accept downside risk. For instance, we would consider the shared savings payments made to ACOs in all tracks of the Shared Savings Program to be financial risk payments. We would also consider net payment reconciliation amounts from us to an Awardee (or vice versa) under the BPCI Initiative, and reconciliation payments from us to a participant hospital or repayment amounts from a participant hospital to us under the CJR model to be examples of financial risk payments.

We proposed to exclude financial risk payments when calculating the estimated aggregate payment amount for covered professional services upon which to base the APM Incentive Payment amount. Financial risk payments are not for specific Medicare Part B covered professional services; rather they are for performance in an APM. Therefore, we believe their inclusion in the estimated aggregate payment amount would be inconsistent with the statutory language and our stated policy principles. In addition, the difficulty of disaggregating payments

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

to individual QPs and the lagged timing of some financial risk payments creates significant policy and operational barriers that we do not believe are in line with our objective of making APM Incentive Payments in a timely manner.

The following is a summary of the comments we received regarding our proposal to exclude financial risk payments when calculating the amount of the APM Incentive Payment.

Comment: Some commenters expressed support for our proposal to exclude financial risk payments when calculating the estimated aggregate payment amount and encouraged CMS to finalize this proposal. Conversely, some commenters did not believe that CMS should exclude financial risk payments when calculating the amount of the APM Incentive Payments. These commenters noted that financial risk payments under CMS shared savings models are the only way that eligible clinicians can be compensated for services not directly paid under the fee schedule, and that these payments are actually compensation that are contingent on performance in an APM.

Response: We note that while financial risk payments may be considered compensation for physician services, many financial risk payments are inclusive of services paid under Medicare Part A in addition to services paid under Medicare Part B. We are not currently able to distinguish which portion of financial risk payments is from services paid under Part A from covered professional services paid under Medicare Part B. We also note that section 1833(z)(1)(A) of the Act stipulates that we are to calculate the amount of the APM Incentive Payment based on the amount that is equal to 5 percent of the estimated aggregate payment amounts for Medicare Part B covered professional services.

Additionally, we note that many financial risk payments are calculated based on the performance of the APM Entity as a whole, not on the performance of individual eligible clinicians that participate in the APM Entity. We do not currently have a way in which we are

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

able to attribute portions of a financial risk payment to an APM Entity to individual eligible clinicians.

After considering public comments, we are finalizing our proposal to exclude financial risk payments when calculating the amount of APM Incentive Payment.

(b) Supplemental Service Payments

Supplemental service payments are Medicare Part B payments for longitudinal management of a beneficiary's health or for services that are within the scope of medical and other health services under Medicare Part B that are not separately reimbursed through the PFS. Often these are per-beneficiary per-month (PBPM) payments that are made for care management services or separately billable services that share the goal of improving quality of care overall, enabling investments in care improvement, and reducing Medicare expenditures for services that could be avoided through care coordination. For example, OCM makes a per beneficiary Monthly Enhanced Oncology Services (MEOS) payment to practices for care management and coordination during episodes of care initiated by chemotherapy treatment.

We proposed to determine whether certain supplemental service payments are in lieu of covered services that are reimbursed under the PFS. In cases where payments are for covered services that are in lieu of services reimbursed under the PFS, those payments would be considered covered professional services and would be included in the APM Incentive Payment amounts. We proposed to include a supplemental service payment in calculation of the APM Incentive Payment amount if it meets all of the following 4 criteria:

(1) Payment is for services that constitute physicians' services authorized under section 1832(a) of the Act and defined under section 1861(s) of the Act;

(2) Payment is made for only Part B services under the first criterion above, that is, payment is not for a mix of Part A and Part B services;

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(3) Payment is directly attributable to services furnished to an individual beneficiary; and

(4) Payment is directly attributable to an eligible clinician.

We further proposed to establish a process by which we notify the public of the supplemental service payments in all APMs and identify the supplemental service payments that meet our proposed criteria and would be included in the APM Incentive Payment calculations. Similar to our proposal to announce Advanced APM determinations, we proposed to post an initial list of supplemental service payments that would be included in our APM Incentive Payment calculations on the CMS Website. As new APMs are announced, we would include the determination of whether supplemental service payment related to that APM would be included in our APM Incentive Payment calculations, if applicable, in conjunction with the first public notice of the APM. We proposed to update the list of supplemental service payments that would be included in our APM Incentive Payment calculations on an ad hoc basis, but no less frequently than on an annual basis.

We solicited comment on this proposed approach to include certain supplemental service payments when calculating the basis for the amount of the APM Incentive Payment. Specifically, we solicited comment on our proposed criteria to include supplemental service payments in the basis for the APM Incentive Payment amounts, and our proposed method for announcing which supplemental service payments would be included in the basis for the APM Incentive Payment amounts.

The following is a summary of the comments we received regarding our proposals for how to consider certain supplemental service payments when calculating the amount of the APM Incentive Payment.

Comment: One commenter supported our proposal to include supplemental service payments in the calculation of the APM Incentive Payment when the four proposed criteria are

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

met.

Other commenters stated that CMS should withdraw its proposal to make specific determinations on each supplemental services payment based on the proposed criteria. These commenters were concerned this proposal adds unnecessary complexity and uncertainty to the calculations and could provide a disincentive for physicians who want to transition away from a FFS approach.

Response: Although we recognize that determining whether certain supplemental service payments are included in the APM Incentive Payment may add limited complexity to calculating the APM Incentive Payment, we intend to mitigate this complexity by clearly communicating the results of these determinations. Additionally, we believe that by recognizing that certain supplemental service payments are in lieu of services traditionally billed under the Medicare PFS, we are incentivizing clinicians to transition away from FFS payment approaches with no link to quality by including supplemental service payments when calculating the amount of the APM Incentive Payment.

Comment: A few commenters stated that CMS should consider ACO shared savings payments as supplemental service payments, and that these payments should always be included when calculating the APM Incentive Payment.

Response: We thank commenters for their input. For the reasons discussed in this section of this final rule with comment, we disagree that shared savings payments to ACOs should be considered supplemental service payments. As clearly indicated in the previous section, we consider shared savings payments to ACOs to be financial risk payments and are finalizing our proposal not to include financial risk payments when calculating the amount of the APM Incentive Payment.

Comment: We received one comment supporting our proposals related to public

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

notification of supplemental service payments, which would include an initial posting of supplemental service payments included in estimated aggregate payment amounts and updates to that list no less than annually.

Response: We thank commenters for their feedback and their support of these proposals.

After considering public comments, we are finalizing our proposal to determine whether certain supplemental service payments are in lieu of covered professional services that are paid under the PFS on the basis of the four proposed criteria:

(1) Payment is for services that constitute physicians' services authorized under section 1832(a) of the Act and defined under section 1861(s) of the Act;

(2) Payment is made for only Part B services under the first criterion above, that is, payment is not for a mix of Part A and Part B services;

(3) Payment is directly attributable to services furnished to an individual beneficiary; and

(4) Payment is directly attributable to an eligible clinician.

We are also finalizing our proposal to establish a process by which we notify the public of the supplemental service payments in all APMs and identify the supplemental service payments that will be included in the APM Incentive Payment calculations. This process includes posting an initial list of supplemental service payments that would be included in our APM Incentive Payment calculations on the CMS Website. We are finalizing our proposal that we will update this list no less frequently than annually and that we will include determinations and updates to this list as new APMs with supplemental service payments are announced.

(c) Cash Flow Mechanisms

Cash flow mechanisms involve changes in the method of payments for services furnished by providers and suppliers participating in an APM Entity. In themselves, cash flow mechanisms do not change the overall amount of payments. Rather, they change cash flow by providing a

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

different method of payment for services. An example of a cash flow mechanism is the population-based payment (PBP) available in the Pioneer ACO Model and the Next Generation ACO Model. A PBP is a monthly lump sum payment in exchange for a percentage reduction in Medicare FFS payments to certain ACO providers and suppliers.

For expenditures affected by cash flow mechanisms, we proposed to calculate the estimated aggregate payment amount using the payment amounts that would have been incurred for Part B covered professional services if the cash flow mechanism had not been in place. For example, for QPs in an ACO receiving a PBP that have agreed to a 50 percent reduction in FFS payments, we would use the amount that would have been paid for Part B covered professional services in the absence of the 50 percent reduction. Cash flow mechanisms represent a potential reallocation of dollars between eligible clinicians and APM Entities for specific purposes related to care improvement. We do not believe that the presence of cash flow mechanisms should impact the APM Incentive Payment amount, and we do not intend for the APM Incentive Payment to influence the use or attractiveness of cash flow mechanisms in current and future APMs.

The following is a summary of the comments we received regarding our proposal for how to account for payments affected by any cash flow mechanism when calculating the amount of the APM Incentive Payment.

Comment: We received one comment supporting our proposal to calculate the estimated aggregate payment amount using the payment amount that would have been made for Part B covered professional services if the cash flow mechanism had not been in place.

Response: We thank the commenter for supporting our proposal.

After considering public comments, we are finalizing our proposal to calculate the estimated aggregate payment amount using the payment amount that would have been made for

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Part B covered professional services if the cash flow mechanism had not been in place.

(d) Payments made to an APM Entity instead of to an eligible clinician

Section 1833(z)(1)(A)(i) of the Act requires us to establish policies for payments that are made to an Advanced APM Entity rather than directly to a QP. We recognize that new payment methods and financial arrangements may be developed as part of APMs that meet this criterion. For instance, in the recently announced CPC+ Model, the supplemental service payments (that is, the CMFs) would meet all of our proposed criteria to be included in the APM Incentive Payment calculations. The CMFs are for Medicare Part B covered professional services and only Medicare Part B covered professional services. The CMF payment amounts would be risk-adjusted based on each individual beneficiary's HCC risk scores; therefore, these payments will be attributable to individual beneficiaries. Additionally, the attribution method in the CPC+ Model uses a combination of the TIN/Individual NPI/ Practice Address when attributing an individual beneficiary to a CPC+ Practice site. However, the CMF payments for attributed beneficiaries are aggregate payments made to each CPC+ Practice Site. We recognize that throughout the course of a QP Performance Period more than one NPI may furnish covered professional services to an attributed beneficiary. If that occurs, more than one NPI could potentially receive the corresponding CMF for that eligible beneficiary. We do not believe it would be appropriate to count the same CMF for more than one NPI. Therefore, assuming that the CPC+ Model is determined to be an Advanced APM and the APM Entity group achieves the QP threshold for a year, we could split the CMF amounts equally between the multiple NPIs, or we could develop a method based on the plurality of visits with that beneficiary to "assign" the NPI to which the CMFs would be credited for purposes of the APM Incentive Payment calculation.

We solicited comment on how to allocate payments made to an APM Entity rather than

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

an eligible clinician.

The following is a summary of the comments we received regarding our proposal.

Comment: We received two comments with respect to allocating the supplemental service payments to individual NPIs in scenarios in which payment for a supplemental service payment is made in the aggregate to an APM Entity. One commenter stated that it would be ideal to attribute the payments to an individual NPI to whom the patient is attributed. If that were not possible, then the commenter favored splitting the CMF amounts equally between the multiple eligible clinicians within the APM Entity as long as those eligible clinicians are limited to the ones actually providing care management. Another commenter stated that any allocation method for CMFs under the APM Incentive Payment should reduce burden by using the same calculation as that of the CMFs themselves.

Response: We appreciate this input. We note that when payments are paid to an APM Entity it may not be possible to identify which eligible clinicians are providing care management services, especially if a beneficiary is attributed to an APM Entity rather than a specific NPI. It is possible that this beneficiary could receive care management services from more than one eligible clinician within the APM Entity. We sought an approach that could provide the most equitable solution for how to identify NPIs to which payment is attributable without resulting in additional operational complexity.

After considering public comments, we are finalizing our proposal that when payments are paid to an APM Entity instead of to an individual eligible clinician, and those payments are not attributable to an individual eligible clinician, we will divide the amount of such payments equally across all eligible clinicians who are on the Participation List for that APM Entity, and each eligible clinician who is a QP will be considered to have been paid that portion of the payments for purposes of the APM Incentive Payment amount calculations.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

## (5) Treatment of Other Incentive Payments in Calculating the Amount of APM Incentive Payments

Section 1833(z)(1)(D) of the Act specifies that we shall not include certain existing Medicare incentive payments in the calculation of the APM Incentive Payment. This includes payments made under section 1833 of the Act (sections (m), (x), and (y)).

Section 1833(m) of the Act describes the HPSA Physician Bonus Program. The HPSA Physician Bonus Program provides bonus payments to physicians for physicians' services furnished in geographic areas that are designated as of December 31 of the prior year by HRSA as HPSAs under section 332 (a)(1)(A) of the PHS Act. The HPSA bonus payment is 10 percent of the Medicare Part B payment amount for the service; and this bonus is paid as a quarterly lump sum payment.

Section 1833(x) of the Act describes the Primary Care Incentive Payment (PCIP) program. The PCIP payment amount was 10 percent of the payment amount for Medicare Part B primary care services furnished by primary care practitioners for whom primary care services accounted for at least 60 percent of their allowed FFS charges in a prior qualification period. For purposes of the PCIP program, primary care practitioners were defined as physicians with certain Medicare specialty codes and as certain types of non-physician practitioners. The PCIP payment was made on a quarterly basis. This bonus payment expired under the statute on December 31, 2015.

Section 1833(y) of the Act describes the HPSA Surgical Incentive Payment (HSIP). For major surgical procedures furnished by physicians with a primary specialty designation of "general surgeon" in HPSAs (under section 332(a)(1)(A) of the PHS Act), physicians received an additional 10 percent bonus payment in addition to the amount of payment that would have otherwise been made. This additional payment was combined with any other HPSA payment

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

outlined in section 1833(m) of the Act and was paid on a quarterly basis. This bonus payment expired under the statute on December 31, 2015.

Section 1833(z)(1)(D) of the Act also directs us not to include APM Incentive Payments when calculating payments made under section 1833 (sections (m), (x), and (y)) of the Act. We consider the APM Incentive Payment to be separate from the incentive payments as previously discussed in the proposed rule, and we have established procedures to ensure that the APM Incentive Payment would not be included when calculating the amount of incentive payments made under section 1833(m), (x), and (y) of the Act.

We received no comments in response to our proposal this section.

As directed by the statute, we are finalizing our proposal not to include incentive payments made under section 1833(m), (x), and (y) of the Act when calculating the amount of the APM Incentive Payment, and not to include APM Incentive Payments when calculating payments made under section 1833(m), (x), and (y) of the Act.

#### (6) Treatment of the APM Incentive Payment in APM Calculations

Section 1833(z)(1)(C) of the Act states that the amount of the APM Incentive Payment shall not be taken into account for purposes of determining actual expenditures under an APM and for purposes of determining or rebasing any benchmarks used under the APM. As a lump sum payment, the APM Incentive Payments will be made outside of the Medicare claims processing system. Current APMs, such as the Medicare ACO initiatives and the CJR model, have established procedures for ensuring that lump sum payments from other APMs are excluded when they do their APM reconciliations and rebasing calculations. We anticipate that each APM will have in place a procedure to avoid counting APM Incentive Payments toward determining actual expenditures or rebasing any benchmarks under the APM.

The following is a summary of comments we received in response to our proposals for  
1690

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

how to treat the APM Incentive Payment in APM-related calculations.

Comment: We received several comments supporting exclusion of the APM Incentive Payment when calculating expenditures under an APM. Some commenters specifically requested that APM Incentive Payments not be taken into account when determining shared savings payments for ACOs and considered it reasonable that we would expect each APM to have a procedure in place to avoid counting APM Incentive Payments when determining actual expenditures or determining or rebasing any benchmarks under an APM.

Another commenter requested further confirmation from CMS that the MIPS payment adjustments are not included in Medicare ACO expenditures for benchmark calculations. The commenter stated that if this were not the case, it would create a disincentive for participation in an ACO and nullify the incentive of an upward payment adjustment.

Response: We note that decisions regarding whether or not to include fee schedule adjustments when calculating expenditures under an APM are typically made on an APM-by-APM basis, and we anticipate that each APM will have procedures in place to exclude the APM Incentive Payment and provide clarification on whether fee schedule adjustments are included when calculating expenditures under that APM.

## b. Services Furnished Through CAHs, RHCs, and FQHCs

### (1) Critical Access Hospitals (CAHs)

Eligible clinicians who furnish services at CAHs that have elected to be paid for outpatient services under section 1834(g)(2)(B) of the Act (Method II) will be eligible to become QPs and receive the APM Incentive Payment if they are part of an Advanced APM Entity. As stated in section II.F.6.d.(1) of this final rule with comment, professional services furnished at a Method II CAH are considered “covered professional services” because they are furnished by an eligible clinician and payments are based on the Medicare PFS. Therefore, we proposed that the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

APM Incentive Payment would be based on the amounts paid for those services attributed to the eligible clinician in the same manner as all other covered professional services.

For an eligible clinician who becomes a QP based on covered professional services furnished at a Method II CAH, we proposed that the APM Incentive Payment would be made to the CAH TIN that is affiliated with the Advanced APM Entity. This proposal was consistent with the way in which we proposed to make the APM Incentive Payment to eligible clinicians who practice at locations other than Method II CAHs. We solicited comment on this proposal.

We did not receive any specific comments on this proposal, and we are finalizing our proposal to make the APM Incentive Payment for an eligible clinician who becomes a QP based on covered professional services furnished at a Method II CAH to the CAH TIN that is affiliated with the Advanced APM Entity.

## (2) Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

As explained in section II.F.6.d.(2) of this final rule with comment, payment for services furnished by eligible clinicians in RHCs and FQHCs is not reimbursed under or based on the PFS. Therefore, professional services furnished in those settings would not constitute covered professional services under section 1848(k)(3)(A) of the Act and would not be considered part of the estimated aggregate payment amount upon which the APM Incentive Payment is based. For eligible clinicians who practice in RHCs or FQHCs, this does not preclude the inclusion of payment amounts for covered professional services furnished by those eligible clinicians in other settings. This only excludes payments made for RHC and FQHC services furnished by the eligible clinicians. For example, an eligible clinician may practice at both an FQHC and with a separate physician group practice that receives payment under the PFS. If the eligible clinician becomes a QP under the methodologies described in II.F.6. of this final rule with comment, whether based on their participation in an Advanced APM Entity that includes the FQHC as

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

outlined in section II.F.6.d.(2) of this final rule with comment or based on their participation in an Advanced APM Entity that includes the separate physician group practice, or both, only the eligible clinician's payments for covered professional services at the separate physician group practice setting would form the estimated aggregate payment amount for the APM Incentive Payment.

We did not receive any specific comments on our proposal for eligible clinicians who become a QP who may also practice at an RHC or FQHC.

We are finalizing our proposal that professional services furnished in RHCs and FQHCs would not constitute covered professional services under section 1848(k)(3)(A) of the Act and would not be considered part of the amount upon which the APM Incentive Payment is based.

#### c. Payment of the APM Incentive Payment

##### (1) Payment to the QP

In the proposed rule, we proposed that the APM Incentive Payment would be made to QPs who are identified by their unique NPI. We proposed that we would make the APM Incentive Payment for a QP to the eligible clinician's TIN that is affiliated with the Advanced APM Entity through which the eligible clinician was determined to be a QP. For both individual eligible clinicians and group practices, we would use the TIN as the billing unit. We proposed that the APM Incentive Payment would be calculated across all billing TINs associated with an NPI. Medicare has the ability to track all unique TIN/NPI combinations associated with an individual NPI, including which TINs are affiliated with an Advanced APM Entity. We considered making separate payments for each TIN/NPI combination associated with the individual eligible clinician's APM Incentive Payment, similar to how the current PQRS incentive payment program operates. Under the current PQRS incentive payment program, incentive payments are paid to the holder of the TIN, aggregating individual incentive payments for groups that bill

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

under one TIN. For eligible clinicians who submit claims under multiple TINs, we group claims by TIN for payment purposes, and any incentive payments earned are paid to that specific TIN. As a result, an eligible clinician with multiple TINs who qualifies for the PQRS incentive payment under more than one TIN would receive a separate PQRS incentive payment associated with each TIN.

However, we believe that making the APM Incentive Payments to the TIN associated with the Advanced APM Entity during the QP Performance Period would be most consistent with the requirements of section 1833(z) of the Act and would incentivize participation in Advanced APMs. Rewarding TINs that are not involved in an Advanced APM for their constituent NPI's activities through separate entities is antithetical to the objective of the Quality Payment Program. We also believe that making the APM Incentive Payments to the TIN associated with the Advanced APM Entity during the QP Performance Period is most consistent with section 1833(z) of the Act with regards to making the APM Incentive Payments to eligible clinicians who become QPs. We believe that making multiple separate payments would increase complexity for both CMS and eligible clinicians.

Additionally, we finalized in section II.F.5. of this final rule with comment, that to be a QP, an eligible clinician must be identified on a CMS-maintained Participation List of an Advanced APM Entity. That will allow us to track the APM participant identifiers for each eligible clinician, and we believe that this information will allow us to determine which of the QPs' TINs should receive APM Incentive Payments.

We recognize that there may be scenarios in which an eligible clinician may change his or her affiliation between the QP Performance Period and the payment year such that the eligible clinician no longer practices at the TIN affiliated with the Advanced APM Entity. In this instance, we proposed to make the APM Incentive Payment to the TIN provided on the eligible

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

clinician's CMS-588 EFT Application. This proposal is consistent with the process that we have used to make incentive payments under other programs, such as the PCIP program.

We solicited comment on our proposal to make the APM Incentive Payments to the TIN affiliated with the Advanced APM Entity through which an individual eligible clinician becomes a QP and our proposal to make the APM Incentive Payment to the TIN provided on the eligible clinician's CMS-588 EFT Application in the event that an eligible clinician no longer practices at the TIN affiliated with the Advanced APM Entity at the time of payment. We also solicited comment on alternative options that maintain the goals of equity and simplicity and encourage and reward participation in Advanced APMs.

The following is a summary of the comments we received regarding our proposal to make the APM Incentive Payment to the TIN affiliated with the APM Entity through which an eligible clinician becomes a QP.

Comment: We received a few comments in support of our proposal. One commenter stated that this proposal would allow for maximum flexibility in the development of APMs, their various organizational structures, and the ways in which revenues might flow through APM Entities. Another commenter supported the suggestion that the APM Incentive Payment is a coordinated effort among eligible clinicians and other aligned providers and suppliers.

We received several comments suggesting alternatives to our proposal. Some commenters stated that they believe the APM Incentive Payment should be made directly to the QP, as identified by either the QP's NPI or by the QP's unique TIN/NPI combination. Some commenters also cited statutory language in section 1833(z) of the Act stating that APM Incentive Payments should be made to "such professionals." Some of the commenters also stated that paying eligible clinicians directly will encourage them to become more engaged in an Advanced APM and its potential impact on patient care. One commenter stated that eligible

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

clinicians have more control over their performance and can respond more quickly to incentives.

Conversely, we received some comments stating that the APM Incentive Payment should be made to the Advanced APM Entity TIN, similar to how shared savings payments are distributed to ACOs in the Shared Savings Program.

Response: APM Incentive Payments will be calculated and made for each QP as identified by an NPI. We further clarify that when referring to the “TIN associated with the Advanced APM Entity,” our intent is that the APM Incentive Payment would be sent to the Medicare enrolled billing TIN that is affiliated with the Advanced APM Entity, and not the TIN of the Advanced APM Entity itself.

Even in instances where an incentive payment has been calculated at an NPI level, CMS has traditionally used the TIN as the billing unit such that any incentive payments earned are paid to the TIN holder of record. This precedent has been followed in various other incentive payment programs, such as the Physician Quality Reporting Initiative (PQRI) incentive payment and the PQRS incentive payment program, and we intend to follow this established precedent of making incentive payments to billing TINs. However, under those incentive payment programs, CMS grouped eligible clinician’ claims by TIN for payment purposes, and any incentive payments earned were paid to that TIN. As a result, an eligible clinician with multiple TINs who qualified for an incentive payments under more than one TIN would have received a separate incentive payment associated with each TIN.

We believe that making the APM Incentive Payments to the TIN associated with the Advanced APM Entity through which an eligible clinician becomes a QP would be most consistent with the requirements of section 1833(z) of the Act and would incentivize participation in Advanced APMs. We also believe that making the APM Incentive Payments to the TIN associated with the Advanced APM Entity during the QP Performance Period is most

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

consistent with section 1833(z) of the Act with regards to making the APM Incentive Payments to eligible clinicians who become QPs.

Given the precedent of making incentive payments to the TIN holder of record, we will make APM Incentive Payments to the Medicare-enrolled billing TIN of a QP's NPI that is in the Advanced APM Entity. We do not prescribe whether or how APM Incentive Payments are to be distributed to QPs within the TIN.

Comment: We received one comment suggesting that CMS allow QPs to share APM Incentive Payments with beneficiaries.

Response: We thank this commenter for their feedback. The Quality Payment Program does not change any existing laws or regulations regarding provider or supplier payments or incentives to beneficiaries.

Comment: Some commenters requested that CMS support fair and timely distribution of the APM Incentive Payment to QPs and encourage all Advanced APM Entities to issue notifications to participating eligible clinicians regarding the distribution of an APM Incentive Payment.

Response: We appreciate the commenter's feedback, and we encourage clear and open communication between Advanced APM Entities, participating TINs, and eligible clinicians regarding the distribution of the APM Incentive Payment. We refer readers to section II.F.8.c.(3) of this final rule with comment period for further details on how we will notify APM Entities, Medicare enrolled billing TINs, and QPs of the amount of the APM Incentive Payment calculated for each QP, as identified by the QP's NPI, so that all involved parties are informed of the amount of the APM Incentive Payment associated with each QP.

After considering public comments, we are finalizing our proposal to make the APM Incentive Payment to the TIN affiliated with the Advanced APM Entity through which an

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

eligible clinician becomes a QP, and we further clarify that the APM Incentive Payment would be sent to the Medicare-enrolled billing TIN associated with the Advanced APM Entity. As discussed in our responses to comments, we note that all Medicare payments are made to a billing TIN, and the ultimate distribution of the APM Incentive Payment is a consideration of the Medicare-enrolled billing TIN and their associated QPs. We are also finalizing our proposal to make the APM Incentive Payment to the TIN provided on the eligible clinician's CMS-588 EFT Application in the event that an eligible clinician no longer practices at the TIN affiliated with the Advanced APM Entity at the time of payment. QP status is determined for, and attached to, an eligible clinician for the payment year based on Advanced APM participation during the QP Performance Period; therefore, changes in practice afterward should not affect a QP's ability to receive the APM Incentive Payment or to be excluded from MIPS reporting requirements and payment adjustments.

## (2) Exception for Eligible Clinicians in Multiple Advanced APMs

We recognize that there may be instances where none of the multiple Advanced APM Entities with which an individual eligible clinician participates meets the QP threshold. In this instance, we have proposed to assess the eligible clinician individually, using services furnished through all Advanced APM Entities during the QP Performance Period. When we make the QP determination at the individual eligible clinician level, we proposed to split the APM Incentive Payment amount proportionally across all of the QP's TINs associated with Advanced APM Entities. For example, if an eligible clinician is determined to be a QP at the individual level based on participation in two Advanced APM Entities (Advanced APM Entity 1 and Advanced APM Entity 2), and has 75 percent of his or her payments used to make the QP determination are through Advanced APM Entity 1 and 25 percent of his or her payments used to make the QP determination are through Advanced APM Entity 2, we would make 75 percent of the APM

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Incentive Payment to the QP's billing TIN associated with Advanced APM Entity 1, and 25 percent of the APM Incentive Payment to the QP's billing TIN affiliated with Advanced APM Entity 2. We believe that splitting the APM Incentive Payment in this way is consistent with section 1833(z) of the Act as well as our goal to encourage participation in multiple Advanced APMs where applicable. We also believe that splitting the incentive payment in this way appropriately recognizes the several activities of the individual eligible clinician toward achieving the QP threshold.

We solicited comment on the proposal to split the APM Incentive Payment among the QP's TINs associated with Advanced APM Entities in instances where the QP determination is made at the individual level based on participation in multiple Advanced APMs. We also welcomed comments regarding to which TIN(s) payments should be made in the cases where the QP changes TIN affiliations between the QP Performance Period and the payments of the APM Incentive Payment.

We did not receive any comments with regards to our proposal to split the APM Incentive Payment among a QP's TINs associated with Advanced APM Entities in instances where the QP determination is made at the individual eligible clinician level.

Comment: We received a few comments regarding our proposal to make the APM Incentive Payment to the TIN provided on the eligible clinician's CMS-588 Electronic Funds Transfer (EFT) Application in scenarios when the eligible clinician is no longer affiliated with the TIN affiliated with the Advanced APM Entity. Some commenters disagreed with our proposal to make the APM Incentive Payment to the TIN provided on the eligible clinician's CMS-588 EFT Application and instead stated that CMS should make the APM Incentive Payment to the individual QP's NPI, not a TIN.

Some commenters questioned why, in the event an eligible clinician is no longer

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

associated with the TIN associated with the Advanced APM Entity, the APM Incentive Payment would be made to a new entity, and questioned why the APM Incentive Payment would not stay with the billing TIN participating in the Advanced APM Entity. In this instance, the commenter suggested we split the payment amount based on either the predominance of where that clinician provided services or based on an end date.

Response: We thank commenters for their feedback, and note that for both individual eligible clinicians and group practices, we use the TIN as the billing unit, meaning that we must be able to track all Medicare payments to a TIN. We also note that not all individual eligible clinicians who are enrolled in Medicare have their own personal billing TIN. We also believe that the APM Incentive Payment is meant to reward eligible clinicians for their participation in an APM Entity. We do not believe that the individual QP's receipt of the APM Incentive Payment for a year should be affected by whether the QP maintains a relationship with the APM Entity between the performance and payment years, and proposed this policy in accordance with that belief.

We are finalizing the proposal to split the APM Incentive Payment amount proportionally, based on the payment amounts used to make the QP determination across all of the QP's TINs associated with Advanced APM Entities when the QP determination is made at the individual level.

We also further clarify that in the event that an eligible clinician participates in more than one Advanced APM Entity, and that eligible clinician meets the QP threshold through more than one Advanced APM Entity, as determined at the group level, we would split the total amount of the APM Incentive Payment in the same manner.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

We proposed to send notification to both Advanced APM Entities and QPs of the APM Incentive Payment amount as soon as we have calculated the amount of the APM Incentive Payment and performed all necessary validation of the results. Following our proposed method to notify eligible clinicians of their QP status, we proposed that the APM Incentive Payment amount notification would be made directly to QPs in combination with a general public notice that such calculations have been completed for the year. For the direct QP notification, we intended to include the amount of APM Incentive Payment and the TIN to which the incentive payments will be made. In the case that the APM Incentive Payment is split across multiple TINs, we proposed to identify which TINs would receive the payment and include the amount that would be paid to each TIN. For the notification to Advanced APM Entities, and other recipient TINs, we intend to include the total amount of APM Incentive Payments that will be made to each participating TIN within the Advanced APM Entity, as well as QP-specific payment amounts. We believed that this would be the most efficient method to disseminate of this information to all QPs.

We solicited comment on other methods for the notification of the APM Incentive Payment amount. We also solicited comment on the content of such notifications so that they may be as clear and useful as possible.

The following is a summary of the comments we received regarding our proposal to notify Advanced APM Entities and QPs of the amount of the APM Incentive Payment.

Comment: Several commenters supported our proposal to send a notification to both Advanced APM Entities and QPs of the APM Incentive Payment amount as soon as CMS has calculated the amount of the APM Incentive Payment and performed all necessary validation of the results. These commenters recommended that the notification include information that allows QP to verify that the payment is correct. Other commenters requested that we include a

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

timeframe for making notifications regarding the APM Incentive Payment amount.

Response: We appreciate the commenters' feedback and support of our proposals. We intend that the notifications of APM Incentive Payment Amounts will include contextual information that will allow QPs to verify the calculation of the APM Incentive Payment amount. We will provide more information on the format of the APM Incentive Payment notifications and the data included with such notifications before they are distributed. We further anticipate that the timing of the APM Incentive Payment amount notification will follow a similar timeline to that outlined in section II.F.8.a.(2) of this final rule with comment period, where we finalize our proposal for the incentive payment base period and timeframe of claims we will use to determine the estimated aggregate payment amounts used for the APM Incentive Payment Amount. We anticipate that the notification of the APM Incentive Payment amounts would occur once CMS has calculated the APM Incentive Payment Amounts but before the APM Incentive Payments are distributed to QPs.

After considering public comments, we are finalizing our proposal to send a notification to both Advanced APM Entities and QPs of the APM Incentive Payment amount as soon as CMS has calculated the amount of the APM Incentive Payment and performed all necessary validation of the results as proposed.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

## 9. Monitoring and Program Integrity

In an effort to accurately award the APM Incentive Payment and preserve the integrity of the Medicare program, we will monitor APM Entities, Advanced APM Entities, and eligible clinicians on an ongoing basis for non-compliance with Medicare program requirements and for non-compliance with the law, regulation, or agreement governing the relevant Advanced APMs during the QP Performance Period. These efforts include vetting of the individuals and entities applying to participate in Advanced APMs and periodically assessing Advanced APM Entities and eligible clinicians by Advanced APMs in conjunction with the CMS Center for Program Integrity and other relevant federal departments and agencies. This vetting and monitoring already takes place for APMs and will continue.

We proposed that if an Advanced APM terminates an Advanced APM Entity or eligible clinician during the QP Performance Period for program integrity reasons, or if the Advanced APM Entity or eligible clinician is out of compliance with program requirements, we may reduce or deny the APM Incentive Payment to such eligible clinicians. In addition, if the APM Incentive Payment is paid based on a QP Performance Period and the Advanced APM Entity or eligible clinician is later terminated due to a program integrity matter arising during that QP Performance Period, we may recoup all or a portion of the amount of the APM Incentive Payment from the individual or entity to which we made the payment.

We also proposed that we would reopen and recoup any payments that were made in error in accordance with procedures similar to those set forth at §§405.980 and 405.370 *et seq.* or established under the relevant Advanced APM.

As discussed in section II.F.7.b.(7) of this final rule with comment period, APM Entities or eligible clinicians who seek to be assessed under the All-Payer Combination Option must submit certain information for us to assess whether their other payer arrangements meet the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Other Payer Advanced APM criteria and to calculate the Threshold Score for a QP determination under the All-Payer Combination Option.

Relatedly, we proposed that Advanced APM Entities and eligible clinicians must maintain copies of all records related to assessment under the All-Payer Combination Option for at least 10 years from the time of submission and must provide the government with access to these records for auditing and inspection purposes. If an audit reveals that the information submitted is inaccurate, we may recoup the APM Incentive Payment.

Nothing in this final rule imposes any limitations or restrictions on the authority of the Department of Health and Human Services Office of Inspector General.

We solicited comment on our monitoring and program integrity proposals.

The following is a summary of the comments we received regarding our proposals to continue CMS vetting of those applying to be and ongoing monitoring of those Advanced APM Entities and eligible clinicians.

Comment: One commenter encouraged CMS to consider additional APM modifications and stringent monitoring mechanisms that will prevent stinting of care and encourage the delivery of high quality care while lowering overall costs.

Response: We appreciate the commenter's input. We consider potential modifications to APM design to better promote program integrity and the delivery of high quality care on an ongoing basis and will continue to do so.

We are finalizing our proposals to vet and monitor APM Entities, Advanced APM Entities, and eligible clinicians.

The following is a summary of the comments we received regarding our proposals to deny, reduce, or recoup APM Incentive Payments made to eligible clinicians if an Advanced APM Entity or eligible clinician is either out of compliance with the Advanced APM's program

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

requirements or if the Advanced APM Entity or eligible clinician is terminated from participating in the APM for program integrity reasons and to reopen and recoup any payments that were made in error in accordance with procedures similar to those set forth at §§405.980 and 405.370 et seq. or established under the relevant Advanced APM.

Comment: Many commenters supported these proposals. One commenter stated that Advanced APM Entities behave more like insurers by taking on more than nominal risk; therefore, Advanced APMs should be subject to regulations traditionally imposed on risk-bearing entities, such as solvency standards or other equivalent program integrity rules. One commenter stated that physical therapists and other non-physician practitioners in APMs should not have conflicts of interest and improper financial motivations, and requested that CMS monitor any negative effect hospital and physician market dominance may have, especially on small non-physician providers in private practice. Alternatively, one commenter opposed penalizing non-compliant clinicians.

Response: We appreciate commenters' suggestions of ways to preserve program integrity. We note that each APM and Advanced APM will be designed to include appropriate program integrity safeguards that will account for the risk-bearing nature of the APM and to protect public funds and the integrity of the Medicare program. We are not setting forth specific program integrity standards in this rule; rather, such standards are incorporated on an APM-specific basis as APMs and Advanced APMs are developed. Additionally, CMS does consider the effects that APMs and Advanced APMs may have in different marketplaces. For Advanced APM Entities and eligible clinicians who fail to comply with an Advanced APM's program requirements, the agreement, law, or regulation governing that Advanced APM defines the process for addressing these issues. Although we understand that some may oppose policies that protect public funds from those who fail to comply with the terms of an Advanced APM, CMS

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

must have the ability to do so in order to preserve program integrity.

Comment: Several commenters suggested that we consider beneficiary impacts of APMs, such as ensuring Advanced APMs have beneficiary protections in place, using patient-centered quality measures, collaborating with beneficiaries regarding APM design, and monitoring for access issues and risks to beneficiary freedom of choice.

Response: We appreciate commenters' focus on protecting beneficiaries. Although largely outside the scope of this final rule, both APMs and Advanced APMs have requirements for beneficiary protections in their relevant agreements or regulations. We have taken outcome measures into account when finalizing the criteria for Advanced APMs, as discussed further in section II.F.4.b.(2) of this final rule with comment period. We also emphasize that if beneficiaries have concerns about their clinicians or the quality of care that they are receiving, they can seek assistance by filing a complaint. More information about filing complaints is available at <https://www.medicare.gov/claims-and-appeals/file-a-complaint/complaint.html>.

Comment: A few commenters noted that there are barriers to APM Entity creation posed by the physician self-referral law, anti-kickback statute, and other fraud, waste, and abuse laws. The commenters requested exceptions, safe harbors, and clear guidelines on the application of these laws to APM participants in order to foster collaboration among clinicians that is beneficial to patients. One commenter requested that CMS ensure that APM Entities are prohibited from waiving copays, giving deep discounts, or offering other incentives to incentivize patients to receive services within the APM Entity. Another commenter requested that the federal government institute a system under which it continually assesses APM Entity compliance with physician self-referral laws, anti-kickback statutes, and gainsharing civil monetary penalty provisions.

Response: Although addressing fraud and abuse laws is not within the scope of this final

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

rule, we will send these comments to the appropriate subject matter experts.

Comment: One commenter requested that we provide guidance to providers, suppliers, and other stakeholders on methods by which the health care community can disclose or report potential violations of fraud and abuse laws.

Response: One way to report potential fraud is by contacting the HHS Office of Inspector General at 1-800-HHS-TIPS or by visiting <https://forms.oig.hhs.gov/hotlineoperations/index.aspx>. Potential fraud can also be reported by calling 1-800-MEDICARE. More information about what information to report is available at <https://www.medicare.gov/forms-help-and-resources/report-fraud-and-abuse/report-fraud/reporting-fraud.html>.

Providers or suppliers who wish to voluntarily disclose self-discovered evidence of potential fraud to CMS or the Office of Inspector General may do so under their respective self-disclosure protocols.

We are finalizing our proposals with no changes. We will deny, reduce, or recoup APM Incentive Payments made to eligible clinicians if an Advanced APM Entity or eligible clinician is either out of compliance with the Advanced APM's program requirements or if the Advanced APM Entity or eligible clinician is terminated from participating in the APM for program integrity reasons and to reopen and recoup any payments that were made in error in accordance with procedures similar to those set forth at §§405.980 and 405.370 et seq. or established under the relevant Advanced APM.

The following is a summary of the comments we received regarding our proposal to require that all Advanced APM Entities and eligible clinicians who submit information in order to obtain a QP determination under the All-Payer Combination Option retain all records, and provide the government with access to these records for auditing and inspection purposes, for at

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

least 10 years.

Comment: Several commenters expressed concern that this requirement is excessively burdensome and becomes more difficult when clinicians change practices. Some commenters suggested alternative retention timeframes such as 3 or 7 years. Some commenters requested that CMS clearly communicate the requirements so that new entrants into APMs can understand the expectations and not be unduly penalized in the future.

Response: In the Medicare Option for QP determinations, we have the Medicare claims information necessary for us to make QP determinations, and there are pre-existing rules that govern record retention of that information. In the All-Payer Combination Option, CMS will make QP determinations based on information created by payers other than Medicare, and for this information to be used, it must be submitted to CMS. CMS must be able to verify this information, and the government must have access to all of these records. We appreciate commenters' concerns about the burdens this requirement may impose, but this 10-year record retention requirement is consistent with other Medicare record retention rules, such as that in the Shared Savings Program, and it aligns with the statute of limitations for claims arising under the False Claims Act.

In order to address the requests for more detail, we intend to issue further details regarding the All-Payer Combination Option before the 2019 QP Performance Period, which is when it first becomes available.

We are finalizing that Advanced APM Entities and eligible clinicians must retain, maintain, and provide the government with access to copies of all records related to submitting data or information to CMS for purposes of QP determinations under the All-Payer Combination Option for at least 10 years from the date that the record was created. We clarify that for any single record, the responsibilities finalized here may be carried out by either an Advanced APM

## 10. Physician-Focused Payment Models

### a. Introduction and Overview

Section 101(e)(1) of the MACRA statute entitled, “Increasing the Transparency of Physician-Focused Payment Models,” adds a new section 1868(c) to the Act. In general, this subsection establishes an innovative process for individuals and stakeholder entities (stakeholders) to propose PFPMs to the Physician-Focused Payment Model Technical Advisory Committee (PTAC). A copy of the PTAC’s charter, established by the Secretary on January 5, 2016, is available at <https://aspe.hhs.gov/charter-physician-focused-payment-model-technical-advisory-committee>.

#### (1) Overview of the roles of the Secretary, the PTAC, and CMS

Section 1868(c)(2)(A) of the Act requires the Secretary to establish, through notice and comment rulemaking following an RFI, criteria for PFPMs (PFPM criteria), including models for specialist physicians, that could be used by the PTAC in making comments and recommendations on PFPMs. We issued the MIPS and APMs RFI requesting stakeholder input on PFPMs on October 1, 2015, and we proposed PFPM criteria in section II.F.10.c. of the Quality Payment Program proposed rule.

The PTAC, established under section 1868(c)(1)(A) of the Act, is a federal advisory committee comprised of 11 members that provides independent advice to the Secretary. As required under section 1868(c)(1)(B) of the Act, the initial appointments to the PTAC were made by the Comptroller General of the United States (GAO) on October 9, 2015.

Section 1868(c)(2)(B) of the Act specifies that stakeholders may submit proposals to the PTAC on an ongoing basis for PFPMs that they believe meet the PFPM criteria established by the Secretary. We recognize this statutory directive, but did not propose to define “ongoing basis” because we believe that the process for submitting proposals to the PTAC should be

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

determined by the PTAC.

Section 1868(c)(2)(C) of the Act requires the PTAC to review stakeholders' proposed PFPMs, prepare comments and recommendations regarding whether such proposed PFPMs meet the PFPM criteria established by the Secretary, and submit those comments and recommendations to the Secretary.

Section 1868(c)(2)(D) of the Act requires the Secretary to review the PTAC's comments and recommendations on proposed PFPMs and to post "a detailed response" to those comments and recommendations on the CMS website.

Without being able to predict the volume, quality, or appropriateness of the proposed PFPMs that the PTAC will make comments and recommendations on, we are not in a position to propose a commitment to test all such models. Section 1868(c) of the Act does not require us to test models that are recommended by the PTAC. However, this does not imply that we would not give serious consideration to proposed PFPMs recommended by the PTAC.

The PTAC serves an important advisory role in the implementation of PFPMs, but there are additional considerations that must be made by the Secretary beyond what is provided by the PTAC, such as competing priorities and available resources. We believe that this flexibility is important because the Secretary and CMS must retain the ability to make final decisions on which models to test and when, based on multiple factors including those that the Innovation Center currently uses to determine which payment models to test, available on the Innovation Center website: <https://innovation.cms.gov/Files/x/rfi-websitepreamble.pdf>.

While we would consider these factors separately from the PTAC's comments and recommendations, the decision to test a model recommended by the PTAC would not require submission of a second proposal to us; we would review the proposal submitted to the PTAC along with comments from the PTAC and the Secretary, and any other resources we believe

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

would be useful. In order to test a PFPM based on a recommendation from the PTAC, CMS may seek to obtain additional information based on the contents of the proposal. After a PFPM proposal has been recommended by the PTAC, if it is selected for implementation, we may work with the individual stakeholders who submitted their proposals to consider design elements for testing the PFPM and make changes as necessary. We note that if a PFPM we select for implementation requires those interested to apply in order to participate, a stakeholder who submitted the proposal would have to apply in order to participate.

Proposed PFPMs that the PTAC recommends to the Secretary but that are not immediately tested by us may be considered for testing at a later time. We may continue to test PFPMs that are developed within CMS but believe that the PTAC process will be instrumental in our goal to develop more PFPMs.

(2) Deadlines for the duties of the Secretary, the PTAC, and CMS

We did not propose to set deadlines for these tasks through regulations. We believe that setting a deadline for the PTAC's comments and recommendations could potentially interfere with the PTAC's ability to develop its own process and timeline for reviewing proposed PFPMs. We wish to preserve the PTAC's ability to determine how and when it would review proposed PFPMs.

We believe that setting a deadline through rulemaking for the Secretary's review of the PTAC's comments and recommendations, publication of a response to them, and our potential testing of a proposed PFPM submitted to the PTAC is inappropriate because these tasks would take varying amounts of time depending on factors that we cannot predict. Proposed PFPMs may be submitted to the PTAC on "an ongoing basis" in accordance with section 1868(c)(2)(B) of the Act, and given that there may be variation in the number and frequency of proposals, setting a deadline for the Secretary's response would be difficult. We do not believe we can effectively set

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

deadlines through rulemaking because we do not know how many PFPM proposals the PTAC would receive or review. The Secretary would need varying lengths of time to review, comment on, and respond to PFPM proposals depending on the volume and nature of each proposal.

We do not believe it would be reasonable to require that we adhere to a deadline in deciding whether to test a particular proposed PFPM. It is important for us to retain the flexibility to test APMs when we believe that it is the right time to do so, taking into account the other APMs we are currently testing, any potential design changes to the proposed PFPM, interactions with our other policies, and resource allocation. APMs generally take 18 months for us to develop, although the period of development may vary in length significantly, making a deadline difficult to establish.

We believe that setting deadlines for testing proposed PFPMs would be inappropriate. Entities need time to complete applications for voluntary models and we need time to review applications and prepare participation agreements for entities to sign. Entities need time to review these participation agreements and to begin planning for implementation of the model. To maintain rigorous evaluation of model outcomes, we also need time to build the necessary model infrastructure for such functions as quality measurement, financial calculations, and payment disbursements, and to coordinate with other payers if they are included in the model's design.

We believe that proposed PFPMs that meet all of the PFPM criteria and are recommended by the PTAC may need less time to go through the development process; however, we cannot guarantee that the development process would be shortened, or estimate by how much it would be shortened. These processes depend on the nature of the PFPM's design, and any attempt to impose a deadline on them would not benefit stakeholders because it would not allow us to tailor the review and development process to the needs of the proposed PFPM.

The following is a summary of the comments we received regarding the roles of the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Secretary, the PTAC, and CMS.

Comment: Commenters encouraged CMS to be open to the PTAC's comments and recommendations and commit to testing PFPMs recommended by the PTAC. A few commenters stated they want CMS to test as many PFPMs as possible. Two commenters expressed concern that CMS would not test PFPMs because CMS has stated it would not commit to testing PFPMs recommended by the PTAC or specifically commit to testing all PFPMs recommended by the Secretary.

Response: We are open to the PTAC's comments and recommendations and believe the PTAC review and recommendation process will be an essential resource for us to use in developing new APMs. While we cannot commit in advance to pursue any particular model before knowing its substance, we are committed to giving all models recommended by the PTAC a thorough and thoughtful review, and to testing high-quality PFPMs, within the limits of our resources and other constraints.

Comment: We received many comments on our process for testing new PFPMs, with an emphasis on PFPMs that would be Advanced APMs if tested. Many commenters requested that we provide details regarding the process for HHS review of comments and recommendations from the PTAC, the Secretary's response to comments and recommendations from the PTAC, and our process for testing PFPMs; and that such details include deadlines. Many commenters requested a clear path to implementation of PFPMs. One commenter agreed that CMS need not establish a deadline in regulations for potential testing of a proposed PFPM. One commenter suggested that not setting deadlines effectively allows the agency to have no responsibility in evaluating PFPM proposals, and requested that we establish deadlines and public criteria for CMS to use in reviewing PFPM proposals. One commenter was concerned that the process for proposing PFPMs is overly complicated and the timeframe is unrealistically aggressive. One

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

commenter disagreed that setting a deadline through rulemaking for the Secretary's review of the PTAC's comments and recommendations, publication of a response, and potential testing is inappropriate and stated that having a time frame should be standard practice.

Response: We did not propose to establish a process or timeline for our review of proposed PFPs or to provide additional information regarding such a process in this rule. To allow us flexibility in considering diverse models of varying scope and features, we do not believe it would be appropriate to establish through rulemaking a single process we would follow, with or without timelines. However, we appreciate that commenters seek additional information from us on our process. Section 1868(c)(2)(D) of the Act requires the Secretary to review the PTAC's comments and recommendations on proposed PFPs and to post a "detailed response" to those comments and recommendations on the CMS website. Therefore, the Secretary has a responsibility to review comments and proposals from the PTAC on PFP proposals and a responsibility to respond. We are mindful of stakeholders' interest in a timely process and are committed to reviewing (and where appropriate, implementing) model proposals as quickly as possible. We intend to provide more information about this process outside of notice and comment rulemaking.

Comment: A few commenters requested that CMS consider how to increase transparency and to incorporate public input into the development of APMs. One commenter expressed concern that the process for designing and updating APMs does not consistently include feedback from consumers and purchasers, which they believed is an essential piece that should always be included. One commenter stated that prior to the implementation of any PFP or Advanced APM, CMS must be transparent concerning the model design and provide the public with the opportunity to review and provide comments on the model with ample time built in for preparation and implementation.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Response: We aspire to foster transparency and cooperation with regard to testing PFPMs, including feedback from consumers and purchasers. We have made public the factors the Innovation Center uses in considering whether to test a model, which would also be relevant to its review of PFPMs, on the Innovation Center website: <https://innovation.cms.gov/Files/x/rfi-websitepreamble.pdf>. Of note, the PTAC has made public information regarding its process for its review of PFPM proposals, and information about this process can be found on the PTAC website at <https://aspe.hhs.gov/ptac-physician-focused-payment-model-technical-advisory-committee>. We intend to provide more information about our process outside of notice and comment rulemaking.

Comment: Multiple commenters requested that the PTAC, the Secretary, and CMS test new PFPMs as soon as possible. Commenters requested CMS facilitate a quick review and approval process for testing PFPMs, including expediting or altering its normal process. A few commenters requested CMS expedite the approval process for Advanced APM proposals, particularly those with specialty physician participants, or otherwise prioritize testing of PFPMs that would be Advanced APMs. Two commenters were concerned about the length of time CMS would need to develop, approve, and implement a PFPM after it is recommended for testing. A commenter stated that many specialty societies that have been working to develop PFPM proposals have been alarmed by comments from CMS officials indicating that even after these proposals have been recommended by the PTAC to the Secretary, they would still need to go through a separate, potentially years-long CMS process before they could be implemented and qualify as Advanced APMs under the Quality Payment Program. Commenters wanted to verify that there are PFPMs that are Advanced APMs available to eligible clinicians during the years the APM Incentive Payment is available. To this end, one commenter suggested making changes to the timing of when Advanced APM criteria need to be met so that PFPMs implemented in

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

2019 would apply to the 2017 QP performance period, and another commenter suggested we waive the application of section 1833(z)(2) of the Act, such that participants in APMs approved by the Innovation Center after 2017 receive a transition period in which such participants' QP eligibility is determined under the eligibility criteria for CY 2017. One commenter requested that PFPMs be an opportunity for multiple APMs to be available to physicians to qualify for the APM Incentive Payment. One commenter suggested CMS interact with the submitter of a PFPM proposal to ensure determinations are made timely based on complete and accurate information with the benefit of full clinical and operational context received directly from the original source. One commenter suggested fast-tracking models that focus on expansion of existing APMs when adequate supporting data are available, and collaborating with specialty societies to provide sufficient feedback on drafts and upfront data to assist with impact modeling.

Response: We appreciate that there is significant interest in creating new opportunities for APMs and Advanced APMs and that commenters would like these opportunities to be implemented quickly. We are mindful of stakeholders' interest in additional models and are committed to reviewing (and where appropriate, implementing) PFPM proposals as quickly as possible. We intend to provide additional information outside of the rulemaking process.

Comment: A few commenters requested an appeals process or opportunity to resubmit if a PFPM proposal is (1) not recommended by the PTAC or (2) not selected for testing by the Secretary, or another form of feedback on proposals that are not commented on favorably by the Secretary. One commenter asked for templates and examples of APMs the PTAC would recommend to CMS. Commenters made requests related to the PTAC's review process, such as the frequency with which they will collect PFPM proposals and whether they will allow resubmissions.

Response: The PTAC will decide whether it will include an appeals process for PFPM

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

proposals it does not recommend and will set its own review process. CMS will not establish through rulemaking a formal reconsideration process for PFFPM proposals that are recommended by the PTAC but not responded to favorably by the Secretary. However, we hope that stakeholders will be open to pursuing changes to the model so that it might be selected in future years for testing by the Secretary. We also appreciate that commenters seek additional information from us on our process. We are committed to transparency and encourage commenters to review the factors the Innovation Center uses in considering whether to test a model on the Innovation Center website: <https://innovation.cms.gov/Files/x/rfi-websitepreamble.pdf>. We intend to provide additional information outside of rulemaking. With respect to the PTAC review process, we refer commenters to the PTAC website at <https://aspe.hhs.gov/ptac-physician-focused-payment-model-technical-advisory-committee>.

Comment: We received comments about how PFFPMs relate to specialty physicians and to primary care physicians. Commenters requested CMS prioritize PFFPMs proposed by the specialty community and including specialist physicians, or just prioritize PFFPMs in general. One commenter suggested that CMS prioritize PFFPMs that use all members of the health care team. One commenter recommended that CMS invest in academic medical centers to support the testing of specialty Advanced APMs. A few commenters recommended CMS collaborate with the PTAC to expand opportunities for primary-care focused Advanced APMs and engage the PTAC to assist in the development, tracking, and reporting of primary care spending as a share of total health care spending.

Response: We thank commenters for their feedback and appreciate the enthusiasm in the development of PFFPMs. We are not finalizing a policy that establishes priorities for PFFPMs beyond prioritizing those that meet the Secretary's criteria. We plan to pay close attention to PFFPM proposals reviewed by the PTAC and look forward to reviewing the PTAC's comments

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

and recommendations on PFPM proposals from stakeholders for both specialty models and primary care models.

Comment: We received comments on the role and composition of the PTAC.

Commenters stated they believe the PTAC can play an important role in developing new APMs and support this opportunity for ideas for APMs to come from a variety of sources. Two commenters were in favor of the role of the PTAC and emphasized the value of input from clinicians and other stakeholders. A few commenters recommended that clinical experts be consulted as part of the PTAC review process, particularly for specialty models, and one commenter requested that the PTAC ensure all stakeholders be included in the PTAC review process. One commenter recommended that the PTAC focus on overarching strategic goals, including private sector initiatives, to lead to greater alignment. One commenter requested more care team diversity, including patients, on the PTAC, in order to further the goal of patient-centeredness. One commenter suggested that a particular specialty should be represented on the PTAC.

Response: We appreciate the interest of commenters in the composition of the PTAC and the PTAC review process. We encourage commenters to engage with the PTAC and to follow its development of the processes it will use to review PFPM proposals. The statute requires that the PTAC be appointed by the GAO, and CMS does not have the authority to appoint members of the PTAC.

Comment: A few commenters encouraged CMS and the PTAC to provide technical assistance for stakeholders in their work to develop and implement APMs. A few commenters requested technical assistance include support for a new team approach, data collection and analysis, access to financial resources, and overall ability to achieve APM status. One commenter noted that assistance and Medicare data need to be provided to organizations

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

developing APM proposals to help them design APMs that will qualify as Advanced APMs.

Response: We will explore opportunities for guidance and assistance that may be provided to stakeholders in drafting PFPM proposals outside of the rulemaking process.

## b. Definition of PFPM

### (1) Definition of PFPM

Section 1868(c) of the Act does not define the term “physician-focused payment model” (PFPM). In §414.1465 of the proposed regulatory text, we proposed to add the following definition of PFPM: An Alternative Payment Model wherein Medicare is a payer, which includes physician group practices (PGPs) or individual physicians as APM Entities and targets the quality and costs of physicians’ services. We proposed to require that a PFPM target physicians’ services to meet the definition of PFPM. To address physicians’ services, we proposed PFPMs might address such elements as physician behavior or clinical decision-making. APM Entities may be individual eligible clinicians, physician group practices (PGPs), or other entities, depending on the payment model’s design. We proposed a PFPM must focus on physicians’ services and contain either individual physicians or PGPs as APM Entities, although it might also include facilities or other practitioner types.

We proposed to require that PFPMs be designed to be tested as APMs with Medicare as a payer. Other Payer APMs would therefore not be PFPMs. We believe this is an appropriate standard for PFPMs because the Secretary is interested in reviewing comments and recommendations from the PTAC on models that may be tested with Medicare as a payer and because the statutory provisions regarding PFPMs and the PTAC are within section 1868 of the Act and title XVIII of the Act, which governs Medicare. A PFPM may include other payers in addition to Medicare under the proposed definition. We believe this definition is appropriate because it could include APMs with arms of their design that would include other payers beyond

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Medicare, but would not include models that involve only Other Payer APMs.

We did not propose to limit a PFPM to exclusively targeting physicians and physicians' services because we believe that stakeholders should be able to propose payment models that include additional types of entities, as well as additional services. We did not propose to define PFPM as an APM that exclusively addresses Medicare FFS payments. A proposed PFPM may also include other payers in addition to Medicare, including Medicaid, Medicare Advantage, CHIP, and private payers, which may promote broader participation in PFPMs and greater potential for cost reduction. A PFPM that includes payers in addition to Medicare could potentially include an Other Payer Advanced APM as part of its design in addition to being an APM.

## (2) Relationship between PFPMs and Advanced APMs

Section 1868(c) of the Act does not require PFPMs to meet the criteria to be an Advanced APM for purposes of the incentives for participation in Advanced APMs under section 1833(z) of the Act, and we did not propose to define PFPMs solely as Advanced APMs. Stakeholders may therefore propose as PFPMs either Advanced APMs or other APMs that might lead to better care for patients, better health for our communities, and lower health care spending.

The following is a summary of the comments we received regarding our proposal to define Physician-Focused Payment Model as an APM wherein Medicare is a payer, which includes physician group practices (PGPs) or individual physicians as APM Entities and targets the quality and costs of physicians' services.

Comment: Many commenters agreed with the proposed definition of a PFPM.

Response: We thank commenters for their feedback.

Comment: Commenters requested clarification or expressed confusion about the relationship between PFPMs, APMs, and Advanced APMs. A few commenters requested that

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

proposed PFPMs, if implemented, should not have to meet the Advanced APM criteria to be Advanced APMs. One commenter requested the nominal risk standard for Advanced APMs specifically be changed for PFPMs, and one suggested that we consider payments through Advanced APMs in 2019, not 2017, for purposes of the QP determination for the APM Incentive Payment in 2019 to allow more time for new PFPMs to be included in this calculation. A few commenters stated that the clear Congressional intent was that PFPMs should be included in the Quality Payment Program as a way to support eligible clinician participation in APMs, even if CMS has determined that PFPMs are not necessarily, by definition, Advanced APMs. One commenter requested clarification that CMS is not limited to considering PFPMs only on the timeline and recommendation of the PTAC, and that CMS can develop its own specialty-related PFPMs.

Response: The definition of PFPM specifies that a PFPM is an APM. APM is defined under section 1833(z)(3)(C) of the Act as any of the following: (1) a model under section 1115A (other than a health care innovation award) of the Act; (2) the Shared Savings Program under section 1899 of the Act; (3) a demonstration under section 1866C; or (4) a demonstration required by federal law. Therefore, if a model is a PFPM it is also an APM. A model that does not meet the definition of APM is not a PFPM. We anticipate PFPMs that are recommended by the PTAC and implemented by CMS will be tested under section 1115A authority. However, a model does not need to be tested under section 1115A of the Act to be a PFPM.

If a PFPM meets criteria for Advanced APMs under section 1833(z)(3)(D) of the Act, as finalized in this rule, it is an Advanced APM. The criteria for Advanced APMs are specified by statute: the APM must require participants to use certified EHR technology; the APM must provide for payment for covered professional services based on quality measures comparable to those in the quality performance category under MIPS; and the APM must either require that

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

participating APM Entities bear risk for monetary losses of a more than nominal amount under the APM, or be a Medical Home Model expanded under section 1115A(c) of the Act. For example, if a model is tested under section 1115A of the Act and it is not a health care innovation award, it is by definition an APM. If it is tested under section 1115A of the Act, is not a health care innovation award, and meets the criteria for Advanced APMs, it is an Advanced APM. We will not categorically waive the requirements for Advanced APMs for PFPMs we test. Section 1833(z)(3)(C) and (D) of the Act makes a clear distinction between APMs and Advanced APMs, and we do not believe the statutory requirements for Advanced APMs can or should be categorically waived for PFPMs. We retain the flexibility to consider and test PFPMs that are developed within CMS.

For the QP determination timeline, we note that under the proposed and final policies in section II.F.5. of this final rule with comment period, participation in a PFPM that is determined to be an Advanced APM for 2017, which is the QP Performance Period for the 2019 APM Incentive Payment, offers the opportunity for participants to become QPs. Because eligible clinicians would have the opportunity to become QPs through participation in PFPMs that are Advanced APMs in the same way they would through participation in other Advanced APMs, we do not believe it would be appropriate to modify the QP determination process and APM Incentive Payment timeframe. Further, as stated in section II.F.5. of this final rule with comment period, the exclusion of QPs from MIPS reporting requirements and payment adjustments dictates an operational timeline that permits us to determine and communicate an eligible clinician's status for a payment year (whether QP, Partial QP, or MIPS eligible clinician) to facilitate timely decisions that impact payment and budget neutrality for the relevant payment year. We do not believe this operational timeline would allow us to retrospectively exclude eligible clinicians from MIPS adjustments already in effect based on later participation in a

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

PFPM that is an Advanced APM.

Comment: A few commenters requested that the definition of PFPM be expanded to include models that do not include physicians or PGPs but include other clinicians as participants. One commenter recommended that PFPM applicants should be required to document how they will include APRN services and how they will use APRNs to the fullest extent of their training.

Response: We agree with commenters that non-physician practitioners are appropriate for inclusion in PFPMs, and we believe offering all eligible clinicians who have the potential to qualify as QPs the opportunity to propose PFPMs will benefit stakeholders and us in pursuing new opportunities for APMs. We believe it is appropriate to change the definition of PFPMs to include models that include any eligible clinicians that fall under the definition in section 1848(k)(3)(B) of the Act. We appreciate that commenters are concerned that non-physician practitioners should be included in Advanced APMs. The list of eligible clinicians for purposes of the APM incentive is defined in section 1833(z)(3)(B) of the Act and includes: physicians, physician assistants, nurse practitioners, clinical nurse specialists, certified registered nurse anesthetists, certified nurse-midwives, clinical social workers, clinical psychologists, registered dietitians or nutrition professionals, physical or occupational therapists, qualified speech-language pathologists, and qualified audiologists. We are revising the definition of PFPM to include this group of clinicians because these are eligible clinicians under the APM track of the Quality Payment Program. Proposed PFPMs can include non-physician eligible clinicians as the participants or as vital to model design. We do not believe it is necessary to require as part of the definition of PFPMs or within the PFPM criteria that a particular specialty or category of clinician be addressed.

Comment: We received comments on how the definition of PFPM relates to APMs and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Advanced APMs. One commenter agreed with the proposal not to limit PFPMs to Advanced APMs and was pleased the definition of PFPMs would mean that any PFPM is an APM if tested by CMS. One commenter stated that CMS has gone too far in restricting the ability of APMs to become Advanced APMs and should ensure a more realistic and attainable pathway allowing physician-developed APMs to be recognized.

Response: As stated above, to be a PFPM, a model must meet the definition of APM under section 1833(z)(3)(C) of the Act. If it meets the criteria for an Advanced APM under section 1833(z)(3)(D) of the Act, it will be an Advanced APM. We do not believe that our policy in defining Advanced APMs will impair the ability of PFPMs to be tested as Advanced APMs. We do not believe there is a reason that PFPMs, as a type of APM, should not be subject to the same criteria as other APMs in order to be considered Advanced APMs.

Comment: A couple of commenters supported the decision to permit PFPMs to contain both Medicare and other payers, while prohibiting consideration of PFPMs that contain only third-party payers without also involving Medicare. A few commenters supported efforts to broaden the scope of PFPMs by not limiting the definition to only physicians' services and by permitting models to address payments other than Medicare FFS. One commenter suggested the PTAC focus on PFPMs based on models from private payers that are not currently APMs.

Response: We are finalizing our policy to define a PFPM as requiring Medicare be a payer while not precluding the inclusion of other payers in addition to Medicare such as Medicaid or private payers in the PFPM's design.

Comment: One commenter proposed changing the language of the definition that addresses physicians' services to instead target "the quality and costs of physician services that the physicians participating in the payment model deliver, order, or can significantly influence." One commenter suggested that physicians should not be held accountable for being part of an

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

APM in which they do not have a role to contribute. One commenter asked that CMS ensure that PFPMs place physicians at the nexus of control for managing a patient’s care, rely on evidence-based guidelines (for example, to avoid reducing care without regard for quality), and incorporate sufficient safeguards to ensure that beneficiaries have access to the best care (for example, proper risk-adjustment and outlier payments). One commenter supported the PFPM definition and suggested that CMS implement stringent safeguards to ensure that the physician(s) remain in an indisputable position of leadership in these cases—reflecting the goal of this aspect of MACRA as being “physician focused.” Another commenter stated that APM Entities in PFPMs, if not explicitly physician-owned, should provide a means for physicians to influence the policies and goals of the organization.

Response: We thank commenters for their feedback and agree that PFPMs should meaningfully engage eligible clinicians. We are finalizing the definition of PFPM to specify that eligible clinicians in the PFPM must play a core role in implementing the APM’s payment methodology, and the PFPM must target the quality and costs of services that these eligible clinicians provide, order, or can significantly influence. We believe this addresses the need for PFPMs to be driven by eligible clinicians without restricting APM Entities in PFPMs to a particular category.

Comment: One commenter suggested that CMS allow stakeholders the opportunity to develop and test models that are simple to implement and flexible enough to allow clinicians to provide patient-centered care that yields improved patient outcomes. One commenter stated that the review criteria for the PFPM payment methodology should provide flexibility and encourage innovation.

Response: We thank commenters for their feedback and agree that flexibility and innovation are important goals for PFPMs. We believe that the definition of PFPM and criteria

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

for PFPMs in this rule provide stakeholders the flexibility to develop PFPM proposals that will fit their specialties and support patient-centered care.

In response to the comments requesting that we include a broader category of clinicians than physicians in PFPMs and that PFPMs be flexible in their focus on the leadership and decision-making of such clinicians, we have changed the definition of PFPM to not require that PGP or individual physicians be included as APM Entities. Instead, PFPMs must give eligible clinicians a core role in implementing the payment methodology. In response to the comments, we are changing the definition of PFPMs to include models that include any eligible clinicians that fall under the definition of EP in section 1848(k)(3)(B) of the Act. We are also changing the definition to include models that address the services of all clinicians that fall under the definition of EP within section 1848(k)(3)(B) of the Act. We are finalizing our proposal not to limit PFPMs to Advanced APMs but instead to include models that, if tested, would be APMs and could potentially be Advanced APMs.

We are finalizing the definition of PFPM to mean an APM: (1) in which Medicare is a payer; (2) in which eligible clinicians that are EPs as defined in section 1848(k)(3)(B) of the Act are participants and play a core role in implementing the APM's payment methodology, and (3) which targets the quality and costs of services that eligible clinicians participating in the Alternative Payment Model provide, order, or can significantly influence.

#### c. Finalized PFPM Criteria

Section 1868(c)(2)(A) of the Act requires the Secretary to establish criteria for PFPMs, including models for specialist physicians, not later than November 1, 2016. The PFPM criteria would be used by the PTAC in discharging its duties under section 1868(c)(2)(C) of the Act to make comments and recommendations to the Secretary on proposed PFPMs. The proposed PFPM criteria were listed in section II.F.10.c.(1). of the proposed rule and at §414.1465(b) of the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

proposed regulatory text. We designed the proposed criteria to be broad enough to encompass all physician specialties and provide stakeholders with flexibility in designing PFPMs.

We proposed PFPM criteria organized into three categories that are consistent with the Administration's strategic goals for achieving better care, smarter spending and healthier people: payment incentives; care delivery; and information availability. First, we proposed a category of criteria that promote payment incentives for higher-value care, including paying for value over volume and providing resources and flexibility necessary for practitioners to deliver high-quality health care.

To address paying for value over volume, we proposed a criterion that PFPMs should provide incentives to practitioners to deliver high-quality health care, and that these incentives should be specifically expected to lead to high-quality health care. We believe that the correct incentives are necessary to drive change to improve quality of care. Similarly, we believe that it is important for a PFPM to provide sufficient flexibility for practitioners to deliver high-quality health care. Flexibility relates to operational feasibility, the PFPM's ability to adapt to accommodate clinical differences in patient subgroups, and the APM Entity's ability to respond to changes in health care.

This category of criteria also aligns with the Innovation Center's statutory authority under section 1115A of the Act to test models aimed to improve care, reduce expenditures, or achieve both of these goals, by proposing a criterion that assesses to what extent a PFPM proposal is expected to achieve these goals. We believe estimates of any cost reduction under the PFPM to the most precise extent possible would also be useful in addressing this criterion.

We proposed a criterion that the PFPM proposal must be designed to pay APM Entities under a payment methodology that furthers the PFPM Criteria. The payment methodology must address how it is different from current Medicare payment methodologies, and why the payment

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

methodology cannot be tested under current payment methodologies. We believe it is necessary for PFPM proposals to contain such a payment methodology because the PTAC is tasked with reviewing payment models and therefore cannot evaluate a proposal without knowing the payment methodology.

We also proposed to include in the first category a criterion that the PFPM must either aim to solve an issue in payment policy not addressed in the CMS APM portfolio at the time it is proposed or include in its design APM Entities who have had limited opportunities to participate in APMs. For a list of models in the CMS APM portfolio, please see <https://innovation.cms.gov/initiatives/index.html#views=models>. We proposed this criterion to promote participation in APMs by broadening and expanding our portfolio of APMs in areas such as geographic location, specialty, condition, and illness, without overly limiting proposed PFPMs. We proposed that because proposed PFPMs may satisfy this criterion by either addressing a new issue or including a new specialty, the criterion was sufficiently broad to allow stakeholders to submit many proposed PFPMs that could expand the CMS APM portfolio. Physicians and practitioners whose opportunities to participate in other PFPMs with us have been limited to date include, for example, those who have not been able to apply for any other PFPM because one has not been designed that would include physicians and practitioners of their specialty. We proposed that a proposed PFPM that includes multiple specialties might meet the PFPM criteria where a minimum of one of the specialties in the proposed PFPM is not currently being addressed by another APM. We made this proposal to reflect the intent of section 1868(c)(2)(A)(i) of the Act which specifically directs the Secretary to establish PFPM criteria, including models for specialist physicians.

We also proposed a criterion that a PFPM proposal must have evaluable goals for the impact of cost and quality under the PFPM. To make the decision to expand an APM under

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

section 1115A(c) of the Act, the Secretary must evaluate its success. This standard informed our proposed criterion not only because it would be important for any APMs that are tested under section 1115A(c) of the Act, but also because it is necessary for measuring the success of any APM that it be evaluable. It is the evaluation of an APM that tells us whether the APM is successful in reducing cost and improving quality of health care.

Second, we proposed a category of criteria that address care delivery improvements that promote better care. Here we proposed criteria to address integration and care coordination, patient choice, and patient safety.

Third, we proposed a category of criteria that address information enhancements that improve the availability of information to guide decision-making. We believe that information enhancements, particularly through use of technology are important to improving Medicare payment policy and delivering better care. Here we proposed a criterion for encouraging use of health information technology.

In carrying out its review of PFPM proposals, the PTAC shall assess whether the PFPM meets the following criteria for PFPMs sought by the Secretary as required by section 1868(c)(2)(C) of the Act. We proposed the following PFPM criteria. The Secretary seeks PFPMs that:

- (1) Incentives: Pay for higher-value care.
  - Value over volume: provide incentives to practitioners to deliver high-quality health care.
  - Flexibility: provide the flexibility needed for practitioners to deliver high-quality health care.
  - Quality and Cost: are anticipated to improve health care quality at no additional cost, maintain health care quality while decreasing cost, or both improve health care quality and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

decrease cost.

- **Payment methodology:** pay APM Entities with a payment methodology designed to achieve the goals of the PFPM criteria. Addresses in detail through this methodology how Medicare and other payers, if applicable, pay APM Entities, how the payment methodology differs from current payment methodologies, and why the Physician-Focused Payment Model cannot be tested under current payment methodologies.

- **Scope:** aim to either directly address an issue in payment policy that broadens and expands the CMS APM portfolio or include APM Entities whose opportunities to participate in APMs have been limited.

- **Ability to be evaluated:** have evaluable goals for quality of care, cost, and any other goals of the PFPM.

(2) **Care delivery improvements:** Promote better care coordination, protect patient safety, and encourage patient engagement.

- **Integration and Care Coordination:** encourage greater integration and care coordination among practitioners and across settings where multiple practitioners or settings are relevant to delivering care to the population treated under the PFPM.

- **Patient Choice:** encourage greater attention to the health of the population served while also supporting the unique needs and preferences of individual patients.

- **Patient Safety:** aim to maintain or improve standards of patient safety.

(3) **Information Enhancements:** Improving the availability of information to guide decision-making.

- **Health Information Technology:** encourage use of health information technology to inform care.

d. CMS Consideration of Models

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

In the proposed rule, we described “supplemental information elements” that we find particularly useful in our review when we consider potential APMs. The “supplemental information” is meant to increase the transparency of our process and is not included within the PFPM criteria.

The following is summary of the comments we received regarding the Secretary’s proposed PFPM criteria and the supplemental information.

Comment: Many commenters were generally in favor of the proposed criteria and enthusiastic about the opportunity for stakeholders to develop PFPMs. While one commenter was in favor of the proposed criteria because they do not limit PFPMs to a particular specialty, many commenters were concerned that the PFPM criteria narrow the field of potential PFPMs and gave recommendations for specific services, practitioners, specialties, and guidelines that should be incorporated into PFPMs. One commenter requested CMS allow flexibility for PFPMs to meet the criteria to promote parity in the availability of specialty-focused models. One commenter requested we incorporate the preamble language regarding the supplemental information into the body of the criteria. One commenter was in favor of the proposed criteria because they did not require specific quality measures.

Response: We appreciate the feedback from commenters regarding the proposed PFPM criteria. We are finalizing the quality and cost criterion that the PFPM be anticipated to improve health care quality at no additional cost, maintain health care quality while decreasing cost, or both improve health care quality and decrease cost. This criterion establishes the importance of quality measurement in PFPMs while allowing stakeholders flexibility in identifying the most appropriate way to measure quality in different PFPMs. In response to commenters that expressed concern about the role of non-physician clinicians and non-physician services, we are modifying the proposed definition of PFPMs to include models that include a broader group of

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

clinicians and their services.

Comment: One commenter was concerned that the proposed PFPM criteria are overly burdensome.

Response: We designed the PFPM criteria to be broad enough to encompass all physician specialties and provide stakeholders with flexibility in designing proposed PFPMs, and to be consistent with the strategic goals for achieving better care, smarter spending, and healthier people. We believe these criteria will attract model proposals that are specifically aligned to achieve these goals.

Comment: One commenter suggested each subcategory of the care delivery goal not be an absolute requirement, particularly where not applicable to a specialty PFPM.

Response: We understand that the Integration and Care Coordination criterion within the care delivery improvements category may not apply to all specialty PFPMs, and as proposed, we accounted for this by stating within the criterion that this applies only “where multiple practitioners or settings are relevant.”

Comment: One commenter stated that providing information about how the PFPM could incorporate CEHRT would be problematic for a pathology PFPM. Another commenter suggested that criteria under the Information Enhancements category should be modified to explicitly address improving the availability of information to all members of the care team, including pharmacists, to guide decision-making in order to encourage communication and information sharing. One commenter supported the information we stated in the preamble would inform the criterion in the Information Enhancements category.

Response: Information about use of CEHRT might inform this criterion, but it is not restricted only to CEHRT. We decline to add more specificity to this criterion to allow for more explicit flexibility, but we believe information about how the PFPM would improve the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

availability of information to all members of the care team would inform this criterion as well as the Integration and Care Coordination criterion.

Comment: One commenter stated that the PFPM criteria should include an evaluation of whether the entity to which payment will be directed is physician-led and if the majority of the governing board(s) is comprised of independent physicians, members of a participating Independent Practice Association, or physicians employed by physician organizations.

Response: We have not added a criterion requiring that APM Entities in PFPMs be physician-led or requiring a specific composition of governing boards because we do not wish to limit the scope of potential PFPMs.

Comment: One commenter stated that our direction regarding “high value services” runs counter to a push toward capitated payments.

Response: We stated that payments for high-value services that we do not currently (or separately) pay for are changes that can be an important part of moving toward value-based delivery system reform, but that adding payment for specific services without any other change does not constitute a sufficient departure from current payment methodologies to meet our proposed PFPM criteria or to be considered an Advanced APM. This does not preclude PFPM proposals from including capitated payments.

Comment: We received multiple comments emphasizing the importance of patients in the design of PFPMs. Commenters suggested that the PFPM design should strive to not further fragment care delivery and that PFPMs should be approved that support the move of Medicare to a program that is truly patient-centered and available on a constant basis, regardless of where the patient is located at a given time. One commenter suggested that CMS and the PTAC consider a proposal’s impact on patient care, quality, and outcomes in addition to costs and believes that applicants may not be able to analyze the full impact a proposed PFPM may have on quality of

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

care and cost. One commenter suggested adding criteria for patient access and experience. One commenter stated that CMS should require PFPMs to document policies and procedures to ensure that they do not employ discriminatory practices that result in the restriction of patient access to services and treatments furnished by any health care provider acting within the scope of their license. One commenter supported that the criteria had strong patient choice focus. One commenter supported CMS' proposed criteria to address integration and care coordination, patient choice, and patient safety, and suggested that PFPM adherence to these criteria should be assessed in the context of the model's proposed quality measures. One commenter recommended that CMS include patient and consumer advocacy in the development of new PFPMs and quality measures including establishing a separate, independent consumer advisory committee to help bring the consumer perspective for PFPM proposals coming from PTAC.

Response: We appreciate feedback from commenters that underscores the importance of PFPMs emphasizing quality and patient-centered care. We believe that our criteria sufficiently require elements related to quality and in particular that the care delivery improvements category of criteria addresses patient experience.

Comment: We received multiple comments on the incentive section of the PFPM criteria. A commenter supported CMS' proposed criteria promoting payment incentives for higher-value care. Another commenter asked that the PTAC and CMS be cautious in approaching procedural episode-based payments, as the commenter believed it is better to structure episodes involving hospice and palliative medicine as a separate bundle, commencing once the services are necessary, rather than including them in a more general condition-specific bundle. One commenter requested a specific payment methodology be included in the design of PFPMs. Another commenter encouraged CMS to add questions to the PFPM review criteria related to whether a model submitted to PTAC considers the inclusion of Hospice and Palliative Medicine

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

providers or, at a minimum, how it will deliver care to patients with serious, life-limiting illness.

One commenter stated that there was too much emphasis in the language for the PFPM section on "incentives" and not enough on paying adequately for needed care. This commenter stated that the PFPM incentives were set up to benefit PFPMs that pay adequately for lower volumes of services rather than those that try to incentivize higher quality and included suggested language changes to fix this part of Quality Payment Program.

Response: We appreciate the comments on the incentive category of PFPM criteria.

These criteria were designed to promote payment incentives for higher-value care, including paying for value over volume and providing resources and flexibility necessary for practitioners to deliver high-quality health care.

Comment: One commenter suggested that PFPMs should be designed to mitigate the risk of excess spending, perhaps by limiting guaranteed additional payments, or ensuring a balance between guaranteed payment and performance-based payment.

Response: We agree that these are sound ideas for the payment structure of PFPMs, but we are not requiring the payment methodology criterion be met through a specific payment structure.

Comment: A commenter suggested that entities should be large enough to detect changes in spending and outcome measures. A commenter recommended that CMS provide more detail on evaluable goals, specifically on evaluation study design and the level of precision the evaluation may reach.

Response: We agree that a means to assess the impact of a PFPM is an important part of its design and would inform the "ability to be evaluated" criterion. Because the diversity of potential proposed PFPMs will necessitate a variety of evaluation designs, we do not require that a specific evaluation design be utilized. As we do for other APMs, we will evaluate the scope of

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

impact of potential PFPMs, and consider whether the potential outcomes merit the required investments and opportunity costs, and whether the impact of the payment model can be measured to determine if it should be expanded.

Comment: Two commenters requested that CMS or the PTAC provide formal guidance and clarification on the definition of “supplemental information” and how it impacts a PFPM proposal. One commenter suggested that CMS specify that other items “the PTAC may request or stakeholders may wish to provide” are not essential and will not result in any negative consequences in the PTAC consideration process. One commenter asked CMS to clarify if the entity submitting a proposal will be able to recruit participants after submission of the proposal to the PTAC and/or CMS.

Response: We thank commenters for their interest in the “supplemental information” discussed in the proposed rule. The “supplemental information” is meant to increase the transparency of our APM review process and is not included within the PFPM criteria. If a PFPM is tested it will not be necessary for the entity submitting a proposal to recruit applicants to participate in the PFPM.

Comment: One commenter suggested that it may be particularly helpful to ensure that there are sufficient models addressing vulnerable and underserved beneficiary populations. Another commenter believed that applicants should describe how they will monitor changes in disparities during the model implementation.

Response: We appreciate the concerns from commenters that PFPMs should address vulnerable populations and monitor changes in disparities during implementation. While we do not have a criterion that requires considerations for any specific population, the scope criterion requires that PFPMs aim to solve an issue in payment policy that broadens and expands the APM portfolio at the time it is tested. We will consider how changes in disparities during model

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

implementation would be monitored as part of our consideration of the scope criterion.

Comment: We received numerous comments about the scope criterion. A few commenters supported requiring that proposed PFPMs expand the CMS portfolio of APMs. A few commenters recommended that PFPM proposals should focus on physicians who do not have the opportunity to participate in other APMs because they are not available to such physicians' specialties. One commenter stated that PFPMs should not duplicate existing efforts and should harmonize with one another to ensure appropriate care coordination and transitions of care for patients. Commenters expressed concern that the scope criterion as proposed is vague and could be interpreted to mean, for example, that the agency is uninterested in models that address cancer care, because there is already an APM specific to cancer care: the Oncology Care Model (OCM). A few commenters stated that multiple APMs should be available to physicians and recommends development of a policy that the current availability of APMs addressing a disease, condition, or episode should not preclude PFPM proposals on the same disease, condition, or episodes(s) within a different APM. A few commenters stated that different designs and approaches for the same disease, condition, or episode should be encouraged and that the approaches should identify decision points and treatment protocols. One commenter suggested physicians that have already participated in a PFPM with CMS be excluded from participation in the proposed PFPMs. One commenter requested that CMS not be overly restrictive in that the commenter believes innovation in PFPMs could generate ideas about how to better address those issues that are perhaps already somewhat incorporated into existing models. One commenter suggested that we specify that PFPMs should rely on evidence-based information to either directly address an issue in payment policy that broadens and expands the CMS APM portfolio or include APM entities whose opportunities to participate in APMs have been limited.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Response: In response to comments we agree that the scope criterion should be broadened and clarified. Regarding who may be included in the PFPM's design, we recognize the opportunity the PTAC represents for clinicians who have not already participated in APMs, but at the same time we do not want to unduly limit the scope of proposals we receive through the PTAC by excluding PFPMs from consideration that include clinicians who have had other opportunities to participate in APMs. We understand the desire of clinicians who have not already participated in an APM with CMS to begin participating through a proposal submission to the PTAC. To ensure we do not obstruct proposals that may have significant positive outcomes for patients and CMS, however, we will not limit proposals to eligible clinicians based on their past participation in APMs. Additionally, we recognize that while CMS may already have an APM addressing a specific disease, condition, or episode, there may still be unique, valuable payment approaches to similar conditions. We are finalizing the scope criterion to require that PFPMs aim to broaden or expand the CMS APM portfolio by addressing an issue in payment policy in a new way or including APM Entities whose opportunities to participate in APMs have been limited. We believe that this criterion will further our goal to promote participation in APMs by broadening and expanding our portfolio of APMs in areas such as geographic location, specialty, condition, and illness, without overly limiting proposed PFPMs. This criterion can be met by either addressing an issue in payment policy in a new way or including APM Entities whose opportunities to participate in APMs have been limited, therefore it is broad to allow stakeholders to submit many proposed PFPMs that could expand the CMS APM portfolio.

We are finalizing our proposed criteria with one modification. We are broadening the proposed scope criterion. The final scope criterion now requires that PFPMs aim to broaden or expand the CMS APM portfolio by addressing an issue in payment policy in a new way or

### **III. Collection of Information Requirements**

Under the Paperwork Reduction Act of 1995, we are required to provide 30-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the proposed rule (81 FR 28350 through 28364), we solicited public comment on each of the section 3506(c)(2)(A)-required issues for the following information collection requirements. PRA-related comments were received as indicated below under the relevant information collection requirements (ICRs).

In response to our request for public comment on our Information Collections, we received several general comments regarding the burden of data collection and the privacy of CMS information collection.

Comment: Several commenters agreed with CMS's effort to streamline multiple reporting programs under one single program to save both time and cost for healthcare providers in tracking and reporting quality to CMS. Several commenters recommended further streamlining and simplifying data reporting to reduce the burden of reporting.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Response: In response to public comments, we have further streamlined reporting in the quality, advancing care information, and improvement activities performance categories between the proposal and the final rule with comment period. In part because of this additional streamlining, the total burden estimate has been reduced between the proposal and the final rule with comment period. The gross burden estimate in the proposal was 12,493,654 burden hours and a burden cost of \$1,327,177,693 (81 FR 28362). The finalized burden estimates are 10,947,453 burden hours and a burden cost of \$1,311,245,806.

Comment: Several commenters disagreed with the proposed rule and suggested that it be withdrawn. The commenters stated that the proposals were unethical and would jeopardize patient confidentiality through the sharing of patient data with the government.

Response: Patient confidentiality is very important to us. Please note that we will collect and disclose personally identifiable information (PII) and/or individually identifiable health information only in accordance with applicable privacy and security laws, including, but not limited to, the Privacy Act of 1974 and the HIPAA Privacy Rule.

In summary, we are finalizing policies that further streamline reporting and reduce burden and have provided additional information to commenters on privacy protections in response to public comments.

The remainder of this section focuses on the estimated burden of clinicians and groups that submit data in response to information collections established by this final rule with comment period. This estimated burden is expressed in terms of time and labor costs. First, we discuss the wage estimates that are used to calculate the labor costs associated with data submission for all the information collection requirements established by this final rule with comment period. Second, we provide a framework summarizing how the information collection requirements vary by the type of data submitted and the type of respondent submitting the data

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(individual clinician, group, APM Entity, or APM billing TIN). Third, we provide burden estimate calculations for each of the information collection requirements established by this final rule with comment period. Finally, we calculate the total gross and net burden across all information collection requirements.

#### A. Wage Estimates

To derive wage estimates, we used data from the U.S. Bureau of Labor Statistics' (BLS) May 2015 National Occupational Employment and Wage Estimates. Table 42 presents the mean hourly wage, the cost of fringe benefits and overhead, and the adjusted hourly wages for billing and posting clerks, computer systems analysts, physicians, practice administrators, and licensed practical nurses as derived from this data. We believe these are the primary positions that will be involved in the collection and reporting of information under this regulation. We have adjusted these employee hourly wage estimates by a factor of 100 percent to reflect current HHS department-wide guidance on estimating the cost of fringe benefits and overhead. These are necessarily rough adjustments, both because fringe benefits and overhead costs vary significantly from employer to employer and because methods of estimating these costs vary widely from study to study. Nonetheless, there is no practical alternative and we believe that these are reasonable estimation methods. In addition, to calculate beneficiary time costs, we have used wage estimates for Civilian, all occupations, using the same BLS data discussed above. We have not adjusted these costs for fringe benefits and overhead because direct wage costs represent the "opportunity cost" to beneficiaries themselves for time spent in health care settings.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

**TABLE 42: Adjusted Hourly Wages Used in Burden Estimates**

Occupation Title	Occupational Code	Mean Hourly Wage (\$/hr.)	Fringe Benefits and Overhead (\$/hr.)	Adjusted Hourly Wage (\$/hr.)
Billing and Posting Clerks	43-3021	\$17.60	\$17.60	\$35.20
Computer Systems Analysts	15-1121	\$43.36	\$43.36	\$86.72
Physicians	29-060	\$97.33	\$97.33	\$194.66
Practice Administrator	11-91111	\$50.99	\$50.99	\$101.98
Licensed Practical Nurse (LPN)	29-2061	\$21.17	\$21.17	\$42.34
Civilian, All Occupations	Not applicable	\$23.23	N/A	\$23.23

Source: “Occupational Employment and Wage Estimates May 2015,” U.S. Department of Labor, Bureau of Labor Statistics. [http://www.bls.gov/oes/current/oes\\_nat.htm](http://www.bls.gov/oes/current/oes_nat.htm).

We added additional occupational titles to the list of occupational titles used in the proposed rule as part of our burden estimates here in order to better reflect the skill mix of the staff that we believe will take part in reviewing measure specifications. Specifically, we are adding practice administrator and licensed practical nurse (LPN) to this list. These changes were in response to comments discussed below under section III.C. ICRs Related to Quality Performance Category and Previously Approved under PQRS.

B. A Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 43 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians varies across the types of data, and whether the clinician is a MIPS eligible clinician, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 43, MIPS eligible clinicians that are not in MIPS APMs and other clinicians voluntarily submitting data will submit data either as individuals or groups to the quality, advancing care information, and improvement activities performance categories.

For MIPS APMs, the organizations submitting data on behalf of participating MIPS eligible clinicians will vary across categories of data, and in some instances across APMs. For

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

the performance period in 2017, the quality data submitted by Shared Savings Program Accountable Care Organizations (ACOs) and Next Generation ACOs on behalf of their participants will fulfill both MIPS submission requirements for the quality performance category. For the advancing care information performance category, billing TINs will submit data on behalf of participants who are MIPS eligible clinicians. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants because CMS will assign the improvement activities performance category score at the MIPS APM level and all APM Entity groups in the same MIPS APM will receive the same score. Advanced APM participants who are determined to be Partial QPs will be required to submit elections as to whether they will participate in MIPS, which is discussed in more detail in section III.I. of this final rule with comment period.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

**TABLE 43: Clinicians or Organizations Submitting MIPS Data On Behalf of Clinicians, by Type of Data and Category of Clinician**

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Advancing Care Information Performance Category	Improvement Activities Performance Category	Partial QP Election
<b>MIPS Eligible Clinicians (not in MIPS APMs) And other clinicians voluntarily submitting data</b>	As groups or individuals.	As groups or individuals.	As groups or individuals.	Not applicable.
<b>Eligible Clinicians participating in the Shared Savings Program</b>	ACOs submit to the CMS Web Interface on behalf of their participating MIPS eligible clinicians.	Each TIN in the APM Entity group reports advancing care information to MIPS <sup>36</sup>	CMS will assign the same improvement activities performance category score to each APM Entity group based on the activities involved in participation in the Shared Savings Program. * [The burden estimates assume no improvement activity reporting burden for APM participants.]	Advanced APM Entities will make election for participating MIPS eligible clinicians.
<b>Eligible Clinicians in the Next Generation ACO Model</b>	ACOs submit to the CMS Web Interface on behalf of their participating MIPS eligible clinicians	Each MIPS eligible clinician in the APM Entity group reports advancing care information to MIPS through either group TIN or individual reporting [The burden estimates assume TIN-level reporting.]	CMS will assign the same improvement activities performance category score to each APM Entity group based on the activities involved in participation in the Next Generation ACO Model. * [The burden estimates assume no improvement activities reporting burden for APM participants]	Advanced APM Entities will make election for participating eligible clinicians.

<sup>36</sup> For MIPS APMs other than the Shared Savings Program, both group and individual clinician advancing care information data will be accepted. If both group and individual scores are submitted for the same MIPS APM Entity, CMS would take the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for the APM Entity score.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Advancing Care Information Performance Category	Improvement Activities Performance Category	Partial QP Election
<b>Eligible Clinicians participating in MIPS APMs other than the Shared Savings Program or Next Generation ACO Model</b>	The APM Entity group would not be assessed on quality under MIPS in the first performance period. The APM Entity group would submit quality measures to CMS required by the APM.  [No burden for submitting MIPS quality data]	Each MIPS eligible clinician in the APM Entity group reports advancing care information to MIPS through either group TIN or individual reporting [The burden estimates assume TIN-level reporting.]	CMS will assign the same improvement activities performance category score to each APM Entity group based on the activities involved in participation in the MIPS APM. * [The burden estimates assume no improvement activities performance category reporting burden for APM participants]	Advanced APM Entities will make election for participating eligible clinicians.

\*APM Entity groups participating in MIPS APMs do not need to report improvement activities data unless the CMS-assigned improvement activities scores is below the maximum improvement activities score.

We did not receive comments on the framework for understanding the burden of MIPS data submission. However, we are updating the framework to reflect changes in reporting requirements for participants in MIPS APMs, as discussed in section II.E.h of this final rule with comment period.

C. ICRs Regarding Quality Performance Category (§414.1330 and §414.1335) and Previously Approved Under PQRS

We anticipate that two groups of clinicians will submit quality data under MIPS, those who submit as MIPS eligible clinicians and other clinicians who opt to submit data voluntarily in, but will not be subject to MIPS payment adjustments. Based on 2015 data from the PQRS and other CMS sources<sup>37</sup>, we estimate that up to 611,876 (or 88 percent of) MIPS eligible clinicians will submit quality performance category data including those participating as groups.

Historically, the PQRS has never experienced 100 percent participation; the participation rate for

<sup>37</sup> The other data sources include 2014 VM data, 2015 PECOS data, and Medicare Part B claims data from 2014 and 2015.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

2014 was 63 percent. For purposes of these analyses, we assume that clinicians who participated in the 2015 PQRS will continue to submit quality data under MIPS as either MIPS eligible clinicians or voluntary reporters. We also assume that the number of MIPS eligible clinicians will be the same in the transition year as it was in our estimate based on 2015 data. Similarly, we assume that the population of clinicians excluded from MIPS will be the same size in 2017 as it was in our 2015 data. We anticipate that the professionals submitting data voluntarily will include Medicare clinicians that are ineligible clinician types, clinicians that meet the low-volume threshold, and newly enrolled Medicare clinicians.<sup>38</sup> Based on those assumptions, we estimate that an additional 296,776 clinicians, or 44 percent of clinicians excluded from MIPS, will submit MIPS quality data voluntarily.

Our burden estimates for quality data submission combine the burden for MIPS eligible clinicians and other clinicians submitting data voluntarily. We assume clinicians will continue to submit quality data under the same submission mechanisms that they used under the 2015 PQRS. Using the 2015 PQRS counts of individuals and groups submitting through various mechanisms, we assume that 332,729 clinicians will submit as individuals through claims submission mechanisms; 258,993 clinicians will submit as individuals or groups through qualified registry or QCDR submission mechanisms; 105,987 clinicians will submit as individuals or groups through EHR submission mechanisms; and 107,884 clinicians will submit as groups through CMS Web Interface. We also assume that clinicians that submitted quality data as groups under the 2015 PQRS will continue to do so under the MIPS first performance year. Specifically, we assume that 2,678 groups will submit data via QCDR and registry submission mechanisms on behalf of

---

<sup>38</sup> The category of 668,090 clinicians permitted to voluntarily submit data includes 199,308 ineligible clinician types, 85,268 newly enrolled Medicare clinicians, and 383,514 low-volume clinicians. See Table 57 in section V.D of this final rule with comment period for additional details on the estimated counts of clinicians excluded from or ineligible for MIPS.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

139,772 clinicians; 903 groups will submit via EHR submission mechanisms on behalf of 54,460 eligible clinicians; and 299 groups will submit data via the CMS Web Interface on behalf of 107,884 clinicians. For CMS Web Interface submission by Shared Savings Program ACOs and Next Generation ACOs, we assume that the 2017 counts of APM Entities and their participants will be the same as the 2016 counts. Specifically, we assume that 433 Shared Savings Program ACOs will submit on behalf of 140,341 participants and 18 Next Generation ACOs will submit on behalf of 24,144 participants.

For clinicians or groups, the burden associated with the requirements of the MIPS quality performance category is the time and effort associated with clinicians identifying applicable quality measures, and submission of the measures.

The burden estimates were revised to reflect differences between the policies established in this final rule with comment period, and those proposed in the proposed rule. In addition, the burden estimates were revised in response to public comments about the underlying assumptions, which are discussed at the end of this section. As a result of these revisions, the gross burden estimate in the proposed rule was 12,493,654 burden hours with an associated burden cost of \$ 1,327,177,693 (81 FR 28362). The finalized burden estimates are 10,894,214 burden hours with an associated burden cost of \$1,311,245,806.

Several differences between the revised policies set forth in this final rule with comment period and the policies in the proposed rule are reflected in the burden estimates, including the reduction in the number of required advancing care information measures from 11 to five and the reduction in the number of recommended improvement activities from six to four. The burden estimates also reflect a simplification of the data submission requirements for MIPS APM participants. Specifically, this final rule with comment period does not generally require MIPS APM participants to submit improvement activities data, whereas the proposed rule did. For the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

advancing care information performance category, this final rule with comment period establishes the capability for participants in MIPS APMs other than the Shared Savings Program to submit data at the billing TIN level. In contrast, we had proposed that participants in Shared Savings Program ACOs submit advancing care information data at the billing TIN level and participants in other MIPS APMs submit advancing care information data at the individual clinician level.

Finally, under the revised policy set forth in this final rule with comment period, Advanced APM participants will be notified about their QP or Partial QP status before the end of the performance period, whereas in the proposed rule, Advanced APM participants would not have been notified of their QP or Partial QP status until after the end of the submission period. Due to the timing of the QP and Partial QP status data, the proposed rule's burden estimates assumed that all Advanced APM Entities would be required to submit Partial QP election data. In the final rule with comment period, we assume the vast majority of Advanced APM participants will not be required to submit Partial QP election data.

In addition to policy differences between the proposed rule and final rule with comment period, the burden estimates also reflect changes in methods. In response to public comments, we have changed our assumptions about the number of hours and skill mix of labor needed to review quality measure specifications. We have also changed our assumptions to more accurately reflect the efficiency gains from group reporting. In the proposed rule, we assumed that the burden per clinician was the same whether they submitted as an individual or as part of a group. In this final rule with comment period's burden estimates, we calculate the burden at the level of the respondent (group or individual clinician) submitting data, and assume the average burden per respondent is the same.

These burden estimates have some limitations. We believe it is difficult to quantify the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' work flows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality data codes into the office workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice. Further, the final burden estimates are based on historical rates of participation in the PQRS program, and the rate of participation in MIPS are expected to differ.

We believe the burden associated with actually submitting the quality measures will vary depending on the submission method selected by the clinician or group. As such, we break down the burden estimates by clinicians and groups according to the submission method used.

We anticipate that clinicians and groups using claims, QCDR and registry, and EHR submission mechanisms will have the same start-up costs related to reviewing measure specifications. As such, we estimate for clinicians and groups using any of these three submission mechanisms a total of 8 staff hours needed to review the quality measures list, review the various submission options, select the most appropriate submission option, identify the applicable measures or specialty measure sets for which they can report the necessary information, review the measure specifications for the selected measures or measures group, and incorporate submission of the selected measures or specialty measure sets into the office work flows. Building on data in a recent [Health Affairs](http://content.healthaffairs.org/content/35/3/401.abstract) article (Casilano et al, 2016) <http://content.healthaffairs.org/content/35/3/401.abstract> we assume that a range of expertise is needed to review quality measures: 3 hours of an administrator's time, 2 hours of a clinician's time, 1 hour of a LPN/medical assistant's time, 1 hour of a computer systems analyst's time, and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

1 hour of a billing clerk's time.<sup>39</sup> We estimate that the start-up cost for a MIPS eligible clinician's practice to review measure specifications is \$730.40, including 3 hours of an practice administrator's time (3 hours X \$101.98=\$305.94), 2 hours of a clinician's time (2 hours X \$182.46/hour=\$364.92), 1 hour of a LPN/medical assistant's time (1 hour X \$42.34), and 1 hour of a billing clerk's time (1 hour X \$35.20/hour = \$35.20). These start-up costs pertain to the specific quality submission methods below, and hence appear in the burden estimate tables.<sup>40</sup>

For the purposes of our burden estimates for the claims, registry and QCDR, and EHR submission mechanisms, we also assume that, on average, each clinician or group will submit six quality measures. Given the lack of historical data on MIPS, it is difficult to estimate the number of physicians who will voluntary elect to test this system by submitting fewer than the six measures required for many clinicians. We believe that the number of clinicians and groups that submit fewer than six measures as they gain experience with the new system may be balanced out by the number of clinicians and groups that continue to submit more than six measures because they were required to submit nine measures under the PQRS.

The revised quality performance requirements and burden estimates were submitted along with all other ICRs listed below under a new OMB control number (0938-NEW). Given that in the first year of implementation CAHPS for MIPS is replacing and using the same questions as CAHPS for the PQRS, the CAHPS for MIPS performance requirements and burden estimates were submitted as a request for continuation of OMB control number (0938-1222),

---

<sup>39</sup> Our burden estimates are based on prorated versions of the estimates for reviewing measure specifications in Lawrence P. Casalino *et al*, "US Physician Practices Spend More than \$15.4 Billion Annually to Report Quality Measures," *Health Affairs*, 35, no. 3 (2016): 401-406. The estimates were annualized to 50 weeks per year, and then prorated to reflect that Medicare revenue is 30 percent of all revenue paid by insurers, and then adjusted to reflect that the decrease from 9 required quality measures under PQRS to 6 required measures under MIPS.

<sup>40</sup> The one exception is the start-up cost for a billing clerk to submit data is not listed in the CMS Web Interface Reporting Burden because the CMS Web Interface measures are very similar to the GPRO Web Interface measures used in the 2016 PQRS.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. ## CAHPS for PQRS.

We received several general comments on the quality performance category burden estimates.

Comment: Several commenters believed that the burden estimates in the Collection of Information section of the proposed rule were too low because MIPS eligible clinicians would require extensive time to become familiar with the program, including quality data reporting, in the transition year.

Response: The estimated burden to become familiar with quality measure specifications has been increased from 1 hour in the proposed rule to 2 hours of clinician time for the transition year of the program. In future program years, we anticipate that the burden will be reduced as clinicians become more familiar with the quality measures and submission requirements.

Comment: Several commenters disagreed with the assumption that a billing clerk could review proposed measures specifications due to their complexity.

Response: We agree with the commenters, and believe that due the complexity of measure specifications, a broader range of occupational titles would need to be involved in reviewing measure specifications. In the proposed rule, we assumed that each practice would require 6 hours of a billing clerk's time and 1 hour of a clinician's time to review measure specifications. As noted above, we have revised our burden estimates to include a mix of staff needed to review quality measure specifications using calculations informed by a recent Health Affairs article (<http://content.healthaffairs.org/content/35/3/401.abstract>). We assume that the skill mix to review measure specifications to include: 3 hours of practice administrator time, 2 hours of clinician time, 1 hour of LPN/medical assistant time, 1 hour of computers system's analyst time, and 1 hour of billing clerk time.

Comment: One commenter noted the reduction in the number of quality measures would

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

reduce burden.

Response: As noted above, the estimated burden to become familiar with quality measure specifications has been increased from 1 hour of clinician time to 2 hours of clinician time. After the transition year, we expect that the burden for quality measures submission will continue to decline in future years as MIPS eligible clinicians become more familiar with quality measures and submission requirements.

Comment: One commenter requested that CMS provide time and cost estimates for determining which quality measures to report.

Response: As noted above, our burden estimates factor in 8 hours of staff time to review quality measure specifications, which includes evaluating which quality measures to report. No further changes will be made in the burden estimates.

In summary, CMS made several changes to the quality performance category data burden estimates in response to comments, including increasing our estimate of the time required to review measure specifications from 7 to 8 hours, and assuming that a broader and more skilled mix of occupational titles would be needed to review measure specifications. In addition, the burden estimates were revised to reflect updated 2015 wage and PQRS data, and to more accurately reflect the burden of group reporting.

#### 1. Burden for Quality Data Submission by Clinicians: Claims-Based Submission

As noted above, we assume that 332,729 individual clinicians will submit quality data via claims based on 2015 PQRS data. We anticipate the claims submission process for MIPS will be operationally similar to the way it functioned under the PQRS. Specifically, clinicians will need to gather the required information, select the appropriate quality data codes (QDCs), and include the appropriate QDCs on the claims they submit for payment. Clinicians will collect QDCs as additional (optional) line items on the CMS-1500 claim form or the electronic equivalent HIPAA

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

transaction 837-P, approved by OMB under control number 0938-0999.

The total estimated burden of claims-based submission will vary along with the volume of claims on which the submission is based. Based on our experience with the PQRS, we estimate that the burden for submission of quality data will range from 0.22 hours to 10.8 hours per clinician. The wide range of estimates for the time required for a clinician to submit quality measures via claims reflects the wide variation in complexity of submission across different clinician quality measures. As shown in Table 44, we also estimate that the cost of quality data submission using claims will range from \$19.08 (0.22 hours X \$86.72) to \$936.58 (10.8 hours X \$86.72). The total estimated annual cost per clinician ranges from the minimum burden estimate of \$878.60 to a maximum burden estimate of \$1,796.10. The burden will involve becoming familiar with MIPS data submission requirements. We believe that the start-up cost for a clinician's practice to review measure specifications total 8, which includes 3 hours of a practice administrator's time (3 hours X \$101.98 = \$305.94), 2 hours of a clinician's time (2 hours X \$194.66/hour = \$389.32), 1 hour of a LPN/medical assistant's time (1 hour X \$42.34 = \$42.34), 1 hour of a computer systems analyst's time (1 hour X \$86.72 = \$86.72), and 1 hour of a billing clerk's time (1 hour X \$35.20/hour = \$35.20). These start-up costs pertain to the specific quality submission methods below, and hence appear in the burden estimate tables.

Considering both data submission and start-up costs, the total estimated burden hours per clinician ranges from a minimum of 8.22 hours (0.22 + 3 + 2 + 1 + 1 + 1) to a maximum of 18.8 hours (10.8 + 3 + 2 + 1 + 1 + 1). The total estimated annual cost per clinician ranges from the minimum estimate of \$878.60 (\$19.08 + \$305.94 + \$389.32 + \$42.34 + \$86.72 + \$35.20) to a maximum estimate of \$1,796.10 (\$936.58 + \$305.94 + \$389.32 + \$42.34 + \$86.72 + \$35.20). Therefore, total annual burden cost is estimated to range from a minimum burden estimate of \$292,335,167 (332,729 X \$878.60) to a maximum burden estimate of \$597,613,226 (332,729 X

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. <b>Estimated Total Annual Burden Cost (r) = (a)*(q)</b>	<b>\$292,335,167</b>	<b>\$331,576,959</b>	<b>\$597,613,226</b>

<sup>41</sup> In Tables 44-55, the numbers have been truncated to two decimals for readability.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

We did not receive comments specific to the claims-based submission burden. We have updated the numbers to reflect updates based on 2015 data and to reflect new assumptions on the staff time required to review measure specifications, but no other changes were made.

## 2. Burden for Quality Data Submission by Clinicians and Groups Using Qualified Registry and QCDR Submissions

As noted above, we assume that 258,993 clinicians will submit quality data as individuals or groups via qualified registry or QCDR submissions based on 2015 PQRS data. Of these, we expect 119,201 clinicians to submit as individuals and 2,678 groups are expected to submit on behalf of the remaining 139,792 clinicians. Given that the number of measures required is the same for clinicians and groups, we expect the burden to be the same for each respondent submitting data via qualified registry or QCDR, whether the clinician is participating in MIPS as an individual or group.

We estimate that burdens associated with QCDR submissions are similar to the burdens associated with qualified registry submissions. Therefore, we discuss the burden for both data submissions together below. For qualified registry and QCDR submissions, we estimate an additional time burden for respondents (clinicians and groups) to become familiar with MIPS submission requirements and, in some cases, new specialty measure sets. Therefore, we believe that the start-up cost for an individual clinician or group to review measure specifications and report quality data to total \$1,126.88. This total includes 3 hours per respondent to submit quality data (3 hours X \$86.72/hour = \$260.16), 3 hours of a practice administrator's time (3 hours X \$101.98/hour = \$305.94), 2 hours of a clinician's time (2 hours X \$194.66/hour=\$389.32), 1 hour of a computer systems analyst's time (1 hour X \$86.72/hour = \$86.72), 1 hour of LPN/medical assistant's time, (1 hour X \$42.34/hour = \$42.34), and 1 hour of a billing clerk's time (1 hour X \$35.20/hour = 35.20). Clinicians and groups will need to authorize or instruct the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to CMS on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) per clinician or group (respondent) for a total burden cost of \$7.20, at a computer systems analyst's labor rate (.083 hours X \$86.72/hour). Hence, we estimate 11.083 burden hours per respondent, with annual total burden hours of 1,350,785 (11.083 burden hours X 121,879 respondents). The total estimated annual cost per respondent is estimated to be approximately \$1,126.88. Therefore, total annual burden cost is estimated to be \$137,342,735 (121,879 X \$1,126.88). Based on these burden requirements and the number of clinicians and groups historically using the Qualified Registry and QCDR submissions, we have calculated a burden estimate for these submissions:

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Estimated Total Annual Cost Per Respondent (v) = (n)+(p)+(q)+(r)+(s)+(t)+(u)	\$1,126.88
<b>Estimated Total Annual Burden Cost (m) = (a)*(v)</b>	<b>\$137,342,735</b>

The following is a summary of the comments we received regarding our burden estimate

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

for the quality performance category using registry or QCDR.

Comment: One commenter stated that the proposed rule underestimated data submission costs because it did not include the fees paid to registries.

Response: The potential financial costs of fees paid to registries are discussed in the section V.C of this final rule with comment period. Because the burden estimates in this section addresses time costs, not direct financial costs, no changes were made to the burden estimate for data submission to registries and QCDRs as a result of this comment. In II.E.9.c(3), we are finalizing our proposal to post QCDR's self-reported costs for MIPS eligible clinicians or groups to use the QCDR on the CMS Website alongside their organizational contact information and the services and measures offered.

In summary, no changes were made to the registry or QCDR data submission burden estimate in response to comments specific to that section. We have updated the numbers to reflect updates based on 2015 data and to reflect new assumptions on group submission and the staff time required to review measure specifications.

### 3. Burden for Quality Data Submission by Clinicians and Groups: EHR Submission

As noted above, based on 2015 PQRS data, we assume that 105,987 clinicians will submit quality data as individuals or groups via EHR submissions; 51,527 clinicians are expected to submit as individuals; and 903 groups are expected to submit on behalf of 54,460 clinicians. We expect the burden to be the same for each respondent submitting data via qualified registry or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the EHR submission mechanism, the individual clinician or group may either submit the quality measures data directly to CMS from their EHR or utilize an EHR data submission vendor to submit the data to CMS on the clinician's or group's behalf.

Based on our experience with the PQRS, we estimate that the time needed to perform all

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

the steps necessary for clinicians or groups to submit quality performance measures includes the time to prepare for participating in quality performance category submissions for MIPS calculated at 8 hours of time to for reviewing specifications: (3 hours of a practice administrator's time, 2 hours of clinician's time, 1 hour of a LPN/medical assistant's time, plus 1 hour of a billing clerk's time). The time preparing for participating in EHR data submission also includes 1 hour for the respondent to obtain an account in the CMS identity management system plus 1 hour for submission of a test data file. This means the final step for quality data via an EHR submission mechanism is an additional 2 hours for data submission.

To prepare for the EHR submission mechanism, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from EHRs, select the appropriate quality measures, extract the necessary clinical data from their EHR, and submit the necessary data to the CMS-designated clinical data warehouse or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for submission of quality measures data via EHR is similar for clinicians and groups who submit their data directly to CMS from their CERHT and clinicians and groups who use an EHR data submission vendor to submit the data on their behalf. To submit data to CMS directly from their CEHRT, clinicians and groups must have access to a CMS-specified identity management system which we believe takes less than 1 hour to obtain. Once a clinician or group has an account for this CMS-specified identity management system, they will need to extract the necessary clinical data from their EHR, and submit the necessary data to the CMS-designated clinical data warehouse. We estimate that obtaining a CMS-specified identity management system will require 1 hour per respondent for a cost of \$86.72 (1 hour X \$86.72/hour), and that submitting a test data file to CMS will also require 1 hour per respondent for a cost of \$86.72. With respect to submitting the actual data file, we believe that this will take clinicians or groups no more than 2 hours per

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

respondent for a cost of submission of \$173.44 (2 hours X \$86.72/hour). The burden will involve becoming familiar with MIPS submission. We believe that the start-up cost for a clinician or group to review measure specifications total 8 hours, which includes 3 hours of a practice administrator’s time (3 hours X \$101.98/hour = \$305.94), 2 hours of a clinician’s time (2 hours X \$194.66/hour=\$389.32), 1 hour of a computer systems analyst’s time (1 hour X \$86.72/hour = \$86.72), 1 hour of a LPN/medical assistant’s time (1 hour X \$42.34/hour = \$42.34), and 1 hour of a billing clerk’s time (1 hour X \$35.20/hour = \$35.20). Hence, we estimated 12 total burden hours per respondent with annual total burden hours of 629,160 (12 burden hours X 52,430 respondents). The total estimated annual cost per respondent is estimated to be \$1,206.40. Therefore, total annual burden cost is estimated to be \$63,251,552 (52,430 X \$1,206.40).

Based on these burden requirements and the number of clinicians and groups historically using the EHR submission mechanism, we have calculated a burden estimate for the quality data submission using EHR submission mechanism:

**TABLE 46: Burden Estimate for Quality Performance Category Clinicians (Submitting Individually or as Part of a Group) Using the EHR Submission Mechanism**

	<b>Burden Estimate</b>
# of Clinicians submitting via EHR (a)	105,987
# of Clinicians submitting as individuals (b)	51,527
# of Groups submitting via EHR on behalf of individual clinicians (c)	903
# of Respondents (groups plus clinicians submitting as individuals) (d)=(b)+(c)	52,430
Estimated Burden Hours Per Respondent to Obtain Account in CMS-Specified Identity Management System (e)	1
Estimated Burden Hours Per Respondents to Submit Test Data File to CMS (f)	1
Estimated Burden Hours Per Respondent to Submit MIPS Quality Data File to CMS (g)	2
Estimated # of Hours Practice Administrator Review Measure Specifications (h)	3
Estimated # of Hours Computer Systems Analyst Review Measure Specifications (i)	1

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. Estimated Cost Billing Clerk Review Measure Specifications (@ clerk's labor rate of \$35.2/hr.) (v)	\$35.20
Estimated Cost Physician Review Measure Specifications (@ physician's labor rate of \$194.66/hr.) (w)	\$389.32
<b>Estimated Total Annual Cost Per Respondent (x)=(p)+(q)+(r)+(s)+(t)+(u)+(v)+(w)</b>	\$1,206.40
<b>Estimated Total Annual Burden Cost (y)=(d)*(x)</b>	\$63,251,552

We did not receive comments specific to the EHR submission burden. We have updated the numbers to reflect updates based on 2015 data and to reflect new assumptions on the staff time required to review measure specifications, but no other changes were made.

#### 4. Burden for Quality Data Submission via CMS Web Interface

Based on 2015 PQRS data and 2016 Shared Savings Program and Next Generation ACO participation data, we assume that 750 organizations will submit quality data via the CMS Web Interface in the 2017 performance period (299 groups, 433 Shared Savings Program ACOs, and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

18 Next Generation ACOs). Approximately 272,369 clinicians will be represented (107,885 clinicians not participating in ACOs; 140,341 Shared Savings Program participants, and 24,144 Next Generation ACO participants). Groups interested in participating in MIPS using the CMS Web Interface must complete a registration process, whereas Shared Savings Program ACOs and Next Generation ACOs do not need to complete a separate registration process. We estimate that the registration process for groups under MIPS involves approximately 1 hour of administrative staff time per group. The weighted average of the time required to register for the CMS Web Interface across all organizations is 0.40 hours (1 hour for each of the 299 groups and zero hours for each of the 433 Shared Savings Program ACOs or 18 Next Generation ACOs.) We assume that a billing clerk will be responsible for registering the group and that therefore, this process has an average labor cost of \$35.20 per hour. Therefore, assuming the total burden hours per group associated with the group registration process is 1 hour, we estimate the total cost to a group associated with the group registration process to be approximately \$14.08. ( $\$35.20 \text{ per hour} \times 0.40 \text{ hours per group}$ ).

The burden associated with the group submission requirements under the CMS Web Interface is the time and effort associated with submitting data on a sample of the organization's beneficiaries that is prepopulated in the CMS Web Interface. Based on experience with PQRS GPRO Web Interface submission mechanism, we estimate that, on average, it will take each group 79 hours of a computer system analyst's time to submit quality measures data via the CMS Web Interface at a cost of \$86.72 per hour, for a total cost of \$6,850.88 ( $79 \text{ hours} \times \$86.72/\text{hour}$ ).

Our estimate of 79 hours for submission includes the time needed for each group to populate data fields in the web interface with information on approximately 248 eligible assigned Medicare beneficiaries and then submit the data (CMS will partially pre-populate the CMS Web

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Interface with claims data from their Medicare Part A and B beneficiaries). The patient data can either be manually entered or uploaded into the CMS Web Interface via a standard file format, which can be populated by CEHRT. Because each group must provide data on 248 eligible assigned Medicare beneficiaries (or all eligible assigned Medicare beneficiaries if the pool of eligible assigned beneficiaries is less than 248), we are assuming that entering or uploading data for one Medicare beneficiary requires 19 minutes of a computer systems analyst's time (79 hours ÷ 248 patients).

We also estimate that for each organization (group or ACO) submitting data, a clinician will need to spend 1 hour per year to review quality measure specifications, for a total cost of \$194.66. The estimated time for reviewing quality measure specifications is lower than under the quality submission mechanisms because the CMS Web Interface measures are very similar to the GPRO Web Interface measures used in the 2016 PQRS. As mentioned above, we estimate it will take an average of 0.40 hours for each organization to register to submit through the CMS Web Interface, for a total of cost of \$14.03 (0.40 X \$35.20). The cost of these 1.40 hours is included in the total estimated annual cost per organization of \$7,059.57. The total annual burden hours are estimated to be 60,299 (750 organizations X 80.40 annual hours), and the total annual burden cost is estimated to be \$5,294,680 (750 organizations X \$7,059.57).

Based on the assumptions discussed above we have calculated the following burden estimate for groups, Shared Savings Program ACOs, and Next Generation ACOs submitting to MIPS with the CMS Web Interface.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

**TABLE 47: Burden Estimate for Quality Performance Category Group Submission via the CMS Web Interface**

	<b>Burden Estimate</b>
Estimated # of Eligible Group Practices (a)	750
Estimated # of Burden Hours Per Group Practice to Self-Nominate to Participate in MIPS Under the Group Reporting Option (b)	0.40

<b>Estimated Total Annual Burden Hours (f) = (a)*(e)</b>	<b>60,299</b>
Estimated Cost Per Group Practice to Self-Nominate to Participate in MIPS Under the Group Reporting Option (@ clerk's labor rate of \$35.2/hr.) (g)	\$14.08
Estimated Cost Per Group to Report (@ computer systems analyst's labor rate of \$86.72/hr.) (h)	\$6,850.88
Estimated Cost for Physician Familiarizing Self with MIPS Measures (@ physician's labor rate of \$194.66/hr.) (i)	\$194.66
<b>Estimated Total Annual Cost Per Group (j) = (g)+(h)+(i)</b>	<b>\$7,059.57</b>
<b>Estimated Total Annual Burden Cost (k) = (a)*(j)</b>	<b>\$5,294,680</b>
	<b>By Provider</b>
Estimated # of Participating Eligible Professionals (l)	272,369
Average Burden Hours Per Eligible Professional (m) = (f) ÷ (l)	0.22
Estimated Cost Per Eligible Professional to Submit Quality Data (n) = (k) ÷ (l)	\$19

We did not receive comments specific to the Web Interface submission reporting burden.

We have updated the numbers to reflect updates based on 2015 data, but no other edits were made.

D. ICRs Regarding Burden for Third Party Reporting and Data Validation (§414.1400 and §414.1390)

1. Burden for Qualified Registry and QCDR Self-Nomination<sup>42</sup>

<sup>42</sup> We do not anticipate any changes in the CEHRT process for health IT vendors as we transition to MIPS. Hence, health IT vendors are not included in the burden estimates for MIPS

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

For CY 2016, 114 qualified registries and 69 QCDRs were qualified to report quality measures data to CMS for purposes of the PQRS, an increase from 98 qualified registries and 49 QCDRs in CY2015.<sup>43</sup> Under MIPS we believe that the number of QCDRs and qualified registries will continue to increase because (1) many MIPS eligible clinicians will be able to use the qualified registry and QCDR for all MIPS submission (not just for quality submission) and (2) QCDRs will be able to provide innovative measures that address practice needs. Qualified registries or QCDRs interested in submitting quality measures results and numerator and denominator data on quality measures to CMS on their participants' behalf will need to complete a self-nomination process in order to be considered qualified to submit on behalf of MIPS eligible clinicians or groups, unless the qualified registry or QCDR was qualified to submit on behalf of MIPS eligible clinicians or groups for prior program years and did so successfully.

We estimate that the self-nomination process for qualifying additional qualified registries or QCDRs to submit on behalf of MIPS eligible clinicians or groups for MIPS will involve approximately 1 hour per qualified registry or QCDR to complete the online self-nomination process.<sup>44</sup>

Please note that the self-nomination statement will occur by submission of an email to CMS, or if technically feasible it will occur via an online form that organizations will use to provide information on their business. We estimate that either of these mechanisms will require the same amount of time for respondents.

In addition to completing a self-nomination statement, qualified registries and QCDRs

---

<sup>43</sup> The full list of qualified registries for 2016 is available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2016QualifiedRegistries.pdf> and the full list of QCDRs is available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2016QCDRPosting.pdf>.

<sup>44</sup> Appendix D of the MIPS Paperwork Reduction Act package is a screen shot of the online self-nomination form for qualified registries and QCDRs.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

will need to perform various other functions, such as meet with CMS officials when additional information is needed. In addition, QCDRs must benchmark and calculate their measure results. The time it takes to perform these functions may vary depending on the sophistication of the entity, but we estimate that a qualified registry or QCDR will spend an additional 9 hours performing various other functions related to being a MIPS qualified registry or QCDR.

We estimate that the staff involved in the qualified registry or QCDR self-nomination process will mainly be computer systems analysts or their equivalent, who have an average labor cost of \$86.72/hour. Therefore, assuming the total burden hours per qualified registry or QCDR associated with the self-nomination process is 10 hours, the annual burden hours is 1,830 (183 QCDRs or qualified registries X 10 hours). We estimate that the total cost to a qualified registry or QCDR associated with the self-nomination process will be approximately \$867.20 (\$86.72 per hour X 10 hours per qualified registry). We also estimate that 183 new qualified registries or QCDRs will go through the self-nomination process leading to a total burden of \$158,697.60 (\$867.20 X 183).

The burden associated with the qualified registry and QCDR submission requirements in MIPS will be the time and effort associated with calculating quality measure results from the data submitted to the qualified registry or QCDR by its participants and submitting these results, the numerator and denominator data on quality measures, the advancing care information performance category, and improvement activities data to CMS on behalf of their participants. We expect that the time needed for a qualified registry to accomplish these tasks will vary along with the number of MIPS eligible clinicians submitting data to the qualified registry or QCDR and the number of applicable measures. However, we believe that qualified registries and QCDRs already perform many of these activities for their participants. We believe the estimate above represents the upper bound of QCDR burden, with the potential for less additional MIPS

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

burden if the QCDR already provides similar data submission services.

Based on the assumptions previously discussed, we provide an estimate of total annual burden hours and total annual cost burden associated with a qualified registry or QCDR self-nominating to be considered “qualified” for the purpose of submitting quality measures results and numerator and denominator data on MIPS eligible clinicians.

**TABLE 48: Burden Estimate for QCDR and Registry Self-Nomination**

	<b>Burden Estimate</b>
Estimated # of Qualified registries or QCDRs Self-Nominating for the PQRS (a)	183
Estimated Total Annual Burden Hours Per Qualified registry or QCDR (b)	10
<b>Estimated Total Annual Burden Hours for Qualified registries or QCDRs (c) = (a)*(b)</b>	<b>1,830</b>
Estimated Cost Per Qualified registry or QCDR (@ computer systems analyst’s labor rate of \$86.72/hr.) (d)	\$867.20
<b>Estimated Total Annual Burden Cost for Qualified registries or QCDRs (e) = (a)*(d)</b>	<b>\$158,698</b>

With regard to the QCDR and registry self-nomination and data submission, we did not receive any public comments regarding the proposed requirements or burden and are adopting them without change.

## 2. Burden for MIPS Data Validation Survey

Under MIPS, a CMS contractor will conduct the MIPS Data Validation Survey in order to identify and address problems with data handling, data accuracy, and incorrect payments. The survey will be part of a broader MIPS strategy to combine our past program integrity processes, including the data validation process used in PQRS and the auditing process used in the Medicare EHR Incentive Program, into one set of requirements for MIPS eligible clinicians and groups, which we refer to as “data validation and auditing”.

Because the data that will be submitted to CMS by, or on behalf of, MIPS eligible clinicians and will be used to calculate payment adjustments, it is critical that this data be accurate. Additionally, the data will be used to generate performance feedback for MIPS eligible

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

clinicians and groups and, in some cases, will be posted publicly on the CMS Web site. This further supports the need for accurate and complete data. The CMS data validation contractor will conduct surveys of groups, registries, QCDRs, health IT vendors, and MIPS eligible clinicians in support of evaluating the data submitted for MIPS. It will be similar to the PQRS Data Validation Survey, which uses a series of approximately 30 questions, arranged by category, to gather information about data handling practices, training, quality assurance, and the challenges that stakeholders face as part of PQRS participation. Under MIPS, the survey's topics will be expanded beyond validation of quality measures to include improvement activities and potentially advancing care information performance category data.

The MIPS Data Validation Survey for performance period 2017 will be conducted in late 2018 for data reported in early 2018. Because the MIPS verification process is still under development, the precise sample size for respondents has not yet been determined. We anticipate that at most 500 organizations would be contacted for MIPS data verification for performance period 2017. Based on the most recent year of the PQRS Data Validation Survey, we will assume that the response rate will be 86 percent. Hence, we estimated the total number of respondents for performance period 2017 will be 430 (500 organizations contacted X 86 percent response rate).

We estimate the total annual burden for the ongoing MIPS data validation survey will be up to 645 hours each performance period (430 responses X 1.5 hours), and the data validation will be conducted at a billing clerk's labor rate of \$35.20 per hour for a total burden cost of \$22,704 (\$35.20/hour X 1.5 hours X 430 responses).

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

**TABLE 49: Total Estimated Burden for MIPS Data Validation Survey**

<b>Respondents</b>	<b>Responses</b>	<b>Burden per Response (Hours)</b>	<b>Total Annual Burden (Hours)</b>	<b>Hourly Labor Cost (\$)</b>	<b>Total Burden Cost (\$)</b>
430	430	1.5	645	\$35.20	\$22,704

With regard to the MIPS data validation survey, we did not receive any public comments regarding the proposed requirements or burden and are adopting them without change.

E. Burden for Quality Data Submission via CAHPS for MIPS Survey

Under MIPS, groups of two or more clinicians can elect to contract with a CMS-approved survey vendor and use the CAHPS for MIPS survey as one of their six required quality measures. Beneficiaries will experience burden under the CAHPS for MIPS Survey.

The usual practice in estimating the burden on public respondents to surveys such as CAHPS is to assume that respondent time is valued, on average, at civilian wage rates. As previously explained, the BLS data show the average hourly wage for civilians in all occupations to be \$23.23. Although most Medicare beneficiaries are retired, we believe that their time value is unlikely to depart significantly from prior earnings expense, and have used the average hourly wage to compute the dollar cost estimate for these burden hours.

Under the first performance period of MIPS, we assume that 461 groups will elect to report on the CAHPS for MIPS survey, which is equal to the number of groups reporting via CAHPS for the PQRS in 2014. Table 50 shows the estimated annualized burden for beneficiaries to participate in the CAHPS for MIPS Survey. Based on historical information on the numbers of CAHPS for PQRS survey respondents, we assume that an average of 287 beneficiaries will respond per group. Therefore, the CAHPS for MIPS survey will be administered to approximately 132,307 beneficiaries per year (461 groups X an average of 287 beneficiaries per

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

group responding). The survey contains 81 items and is estimated to require an average administration time of 18.0 minutes in English (at a pace of 4.5 items per minute) and 21.6 minutes in Spanish (assuming 20 percent more words in the Spanish translation), for an average response time of 19.8 minutes or 0.33 hours. These burden and pace estimates are based on CMS’s experience with surveys of similar length that were fielded with Medicare beneficiaries. Given that we expect approximately 132,307 respondents per year, the annual total burden hours are estimated to be 43,661 hours (132,307 respondents X .33 burden hours per respondent). The estimated total burden annual burden cost is \$1,014,252 (43,661 total burden hours X \$23.23 per hour)

**TABLE 50: Burden Estimate for Beneficiary Participation in CAHPS for MIPS Survey**

	<b>Burden Estimate</b>
Estimated # of Eligible Group Practices Administering CAHPS for MIPS Survey (a)	461
Estimated # of Beneficiaries Per Group Responding to Survey (b)	287
Estimated # of Total Respondents Completing Survey	132,307
Estimated # of Burden Hours Per Respondent to Report (d)	0.33
Estimated Cost Per Beneficiary Reporting (@ labor rate of \$23.23/hr.) (e)	\$7.67
<b>Estimated Total Annual Burden Hours (f) = (c)*(d)</b>	<b>43,661</b>
<b>Estimated Total Annual Burden Cost for Beneficiaries Responding to CAHPS PQRS (g) = (c)*(e)</b>	<b>\$1,014,252</b>

With regard to the CAHPS for MIPS Survey, we did not receive any public comments regarding the proposed requirements or burden. We are updating the CAHPS burden estimates to reflect 2015 data, but no further changes were made.

F. ICRs Regarding Burden Estimate for Advancing Care Information Data (\$414.1375)

During the transition year, clinicians and groups can submit advancing care information data through qualified registry, QCDR, EHR, CMS Web Interface, and attestation data submission methods. Also, we have streamlined the submission requirements for advancing care information under the MIPS. Compared to the reporting requirements in the 2015 Medicare

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

EHR Incentive Program Final Rule, two objectives and their associated measures (Clinical Decision Support and Computerized Provider Order Entry) will no longer be required for submission purposes. We have also worked to align the advancing care information performance category with other MIPS performance categories, such as submitting eQMs to the quality category, which will streamline submission requirements and reduce MIPS eligible clinician confusion. In addition, as part of our efforts to align and streamline submission requirements, we are providing a group reporting option (which did not exist under the Medicare EHR Incentive Program). Hence, a MIPS eligible clinician's estimated burden for the advancing care information performance category is lower than the estimated 7 hours per MIPS eligible clinician in the Medicare EHR Incentive Program –Stage 3 PRA (OMB control number 0938-1278) currently under review at OMB. We are requesting that effective January 1, 2017, the MIPS Collection of Information Requirements replace those for eligible clinicians in the Medicare EHR Incentive Program Stage 3 PRA.<sup>45</sup>

As noted above in section B, billing TINs may report advancing care information performance category data on behalf of MIPS eligible clinicians in MIPS APMs, or, except for participants in the Shared Savings Program, MIPS eligible clinicians in MIPS APMs may report advancing care information performance category data individually. Because billing TINs in APM Entities will be report advancing care information performance category data to fulfill the requirements of submitting to MIPS, we have included MIPS APMs in our burden estimate for the advancing care information performance category. Consistent with the proposed list of APMs that are MIPS APMs in the proposed rule, we assume that three MIPS APMs that do not also qualify as Advanced APMs will operate in the first performance period: Track 1 of the Shared

---

<sup>45</sup>We do not anticipate any changes in the CERHT process for EHR vendors as we transition to MIPS. Hence, EHR vendors are not included in these burden estimates.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Savings Program, CEC (one-sided risk arrangement), and OCM (one-sided risk arrangement).

**TABLE 51: Estimated Numbers of Organizations Submitting Advancing Care Information Performance Category Data on Behalf of Eligible Clinicians**

<b>Category of Clinician</b>	<b>Available Mechanisms for Submission</b>	<b>Estimated Number of Organizations Submitting Data</b>
<b>MIPS Eligible Clinicians (not in APMs)</b>	As groups or individuals.	503,457 clinicians submitting as individuals. 3,880 groups submitting on behalf of 194,192 clinicians
<b>MIPS Eligible Clinicians participating in the Shared Savings Program</b>	Each TIN in the APM Entity group reports advancing care information to MIPS through group TIN reporting	14,384 billing TINs representing 140,341 participants in 433 Shared Savings Program ACOs.
<b>MIPS Eligible Clinicians participating in MIPS APMs other than the Shared Savings Program</b>	Each MIPS eligible clinician in the APM Entity group reports advancing care information to MIPS through either group TIN or individual reporting [The burden estimates assume TIN-level reporting.]	33 Billing TINs representing 1 APM Entity in CEC (non-LDO arrangement)  6,478 Billing TINS representing 195 APM Entities in OCM one-sided risk arrangement.
<b>Total Number of Organizations and Individuals Submitting Data</b>		528,231 respondents

Because performance year 2017 will be the first year for clinicians to report the advancing care information performance category data as groups, there is considerable uncertainty about what number of clinicians will report as part of a groups. Given the limitations of historical 2015 EHR Incentive Program data, some of our burden estimate’s assumptions are based on 2015 PQRS data. Specifically, we assume that the number of individual clinicians and groups submitting advancing care information data will be the same as the number of individual clinicians and groups submitting data under the 2015 PQRS. Hence, we assume 503,457 clinicians will submit as individuals and 3,880 groups submitting data on behalf of 194,192 clinicians. Further we anticipate that the 433 Shared Savings Program ACOs will submit data at the ACO participant billing TIN level, for a total of 14,384 billing TINS representing 140,341 participants. We

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

anticipate that the APM Entity in the CEC model one-sided risk arrangement (at the time of publication, there is only one APM Entity in this track) will submit data at the billing TIN level, for an estimated total of 33 billing TINs submitting data. Finally, we anticipate that the 195 APM Entities in the OCM one-sided risk arrangement will submit at the billing TIN level, for an estimated 6,478 billing TINs submitting data. Hence, as shown in Table 51, we estimate that up to approximately 528,231 respondents will be submitting data under the advancing care information performance category (503,457 MIPS eligible clinicians + 3,880 groups submitting on behalf of clinicians + 14,384 billing TINs within the Shared Savings Program ACOs + 33 billing TINs within the APM Entity participating in CEC one-sided risk arrangement and 6,578 billing TINs within the OCM one-sided risk arrangement). The total burden hours for a clinician or group to report on the specified Advancing Care Information Objectives and Measures will be 3 hours. The total estimated burden hours are 1,584,694 (528,231 responses X 3 hours). At a clinician’s hourly rate, the total burden cost is \$304,476,511 (1,584,694 hours X \$194.66/hour).

**TABLE 52: Total Estimated Burden for Advancing Care Information Performance Category Data Submission**

<b>Respondents</b>	<b>Responses</b>	<b>Burden per Response (Hours)</b>	<b>Total Annual Burden (Hours)</b>	<b>Hourly Labor Cost (\$)</b>	<b>Total Burden Cost (\$)</b>
528,231	528,231	3	1,584,694	\$194.66	\$308,476,511

The following is summary of the comments we received regarding our burden estimate for the advancing care information performance category.

Comment: Two commenters noted that group reporting under advancing care information and other categories would reduce reporting burden.

Response: As noted above, there is considerable uncertainty about the number of MIPS eligible clinicians who will report as part of a group, and no historical data on group reporting for the EHR Incentive Program We have revised our burden to more appropriately reflect the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

reduction in burden due to group reporting by assuming that groups that submitted quality data to the 2015 PQRS would also do so under the advancing care information performance category.

We assume that the burden of advancing care information data submission is the same for each respondent, whether that respondent is a group, individual clinician, or billing TIN in a MIPS APM. In the proposed rule, we assumed that all MIPS eligible clinicians not in MIPS APMs would report as individuals. Due to the change in our assumptions about group reporting, our estimated burden of advancing care information is lower than in the proposed rule.

Comment: Two commenters noted that the removal of redundant eQMs in the advancing care information category would reduce burden.

Response: As noted above, our efforts to align the advancing care information performance category with other MIPS performance categories, such as submitting eQMs to the quality category, will streamline submission requirements and reduce confusion for MIPS eligible clinicians. Consistent with the reduction in measures, we have reduced our burden estimates for the advancing care information performance category from the proposed 4 hours to 3 hours per respondent. Note that the estimated burden of 3 hours is lower than the estimated 7 hours per clinician in the Medicare EHR Incentive Program –Stage 3 Paperwork Reduction Act Package.<sup>46</sup> After the transition year, we anticipate a further reduction in the burden of submitting advancing care information measures as MIPS eligible clinicians and organizations submitting data on their behalf become more familiar with and have adapted to the measure specifications.

Comment: Several commenters stated that the burden estimates in the Collection of Information section of the proposed rule were too low because MIPS eligible clinicians would require extensive time to become familiar with the program, including the advancing care

---

<sup>46</sup>The Medicare EHR Incentive Program –Stage 3 PRA package Paperwork Reduction Act Package is available at <https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.html>.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

information performance category, in the transition year.

Response: In response to public comments on the advancing care information performance category, we have reduced the number of required measures from 11 to five. Accordingly, we have reduced our burden estimates for the advancing care information performance category from the proposed 4 hours to 3 hours per respondent. After the transition year, we anticipate a reduction in the burden of reporting advancing care information measures as MIPS eligible clinicians and organizations reporting on their behalf become more familiar with and have adapted to the measure specifications.

In summary, we have modified our advancing care information data submission requirements in response to public comment, and reduced the corresponding burden estimates as compared to the proposal. In response to public comments, we have also adjusted our estimates to more accurately reflect the burden due to group reporting. Further, the burden estimates have been revised to reflect changes advancing care information data submission requirements for APM Entities under the APM scoring standard between the proposal and final rule, and changed to incorporate updated data on wages, PQRS, and counts of ACOs and their participants.

#### G. ICRs Regarding Burden for Improvement Activities Submission (§414.1355 and §414.1365)

Requirements for submitting improvement activities are new, and we do not have historical data which is directly relevant. As noted in section II.E.F of this final rule with comment period, a variety of organizations and in some cases, individual clinicians, will report improvement activity performance category data. For clinicians who are not part of APMs, we assume that the number of clinicians submitting improvement activities as part of a group will be approximately the same as the number of clinicians submitting PQRS data as part of a group through the QCDR and registry, EHR, and GPRO Web Interface submission mechanisms in 2015. As noted above, MIPS eligible clinicians participating in MIPS APMs do not need to

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

report improvement activities data unless the CMS-assigned improvement activities score is below the maximum improvement activities score. We estimate that that there could be as many as 503,547 clinicians submitting improvement activities performance category data as individuals, which is equal to the number of clinicians submitting as individuals using the claims, QCDR or qualified registry, or EHR submission mechanisms under the 2015 PQRS.<sup>47</sup> We estimate that approximately 194,192 clinicians comprising 3,880 groups may submit at the group level. The burden estimates assume no improvement activities reporting burden for MIPS APM participants. CMS will assign the improvement activities performance category score at the APM level; each APM Entity within the same MIPS APM will be assigned the same score.

**TABLE 53: Estimated Numbers of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Eligible Clinicians**

Category of Clinician	Available Mechanisms for Submission	Estimated Number of Entities Submitting Data
MIPS Eligible Clinicians (not in APMs)	As groups or individuals.	3,880 groups representing 302,076 eligible clinicians.  503,337 eligible clinicians submitting individually.
MIPS APM participants	No reporting burden	0

During the transition year, clinicians and groups can submit data via qualified registry, QCDR, EHR, CMS Web Interface, or attestation data submission mechanisms. In addition to collecting necessary supporting documentation, each clinician and group, will provide a yes/no attestation submitted during the data submission period for successfully completed improvement activities. We estimate that up to approximately 507,457 groups or individuals (3,880 groups and + 503,337 individual clinicians) will be submitting data for improvement activities. We

<sup>47</sup> Because of the lack of historical data on improvement activities submission, our estimate of 595,100 eligible clinicians submitting improvement activities data is based on 2014 PQRS historical data (595,100 eligible clinicians = 299,169 eligible clinicians submitting quality data through claims + 214,590 eligible clinicians submitting quality data through QCDR or qualified registry + 77,241 eligible clinicians submitting quality data through EHR).

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

estimate it will take no longer than 2 hours per group or individual to submit data for the improvement activities performance category. The total estimated burden is 1,014,674 hours (507,337 groups or individuals X 2 hours each). At a physician’s hourly rate, the total estimated burden cost is \$197,516,441(1,014,674 hours X \$194.66).

**TABLE 54: Total Estimated Burden for Improvement Activities Submission**

<b>Respondents</b>	<b>Responses</b>	<b>Burden per Response (hours)</b>	<b>Total Annual Burden (hours)</b>	<b>Hourly Labor Cost (\$)</b>	<b>Total Burden Cost (\$)</b>
507,337	507,337	2	1,014,674	\$194.66	\$197,516,441

We received comments regarding the improvement activities submission burden estimates.

Comment: Several commenters believed that the burden estimates were too low because MIPS eligible clinicians would require extensive time to become familiar with the program in the transition year.

Response: In response to public comments on the improvement activities performance category, we have reduced the number of recommended improvement activities from six to four. Consistent with the reduction in measures, we have reduced our estimate of the data submission in this final rule with comment to 2 hours from the 3 hours estimated in the proposed rule.

We have also simplified the improvement activities data submission requirements for MIPS APM participants. The proposal was to require individual MIPS eligible clinicians participating in MIPS APMs to submit improvement activities data. Under the policies finalized in this final rule with comment period, MIPS APM participants will not be required to submit improvement activities data because CMS will assign the score at the MIPS APM level. As noted above, APM Entities in MIPS APMs may submit improvement activities data if the CMS-assigned improvement activities scores is below the maximum improvement activities score.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

In summary, we have simplified the improvement activities submission requirements in response to public comments. We have updated the improvement activities burden estimate to reflect the updated data submission requirement, to reflect 2015 data and to more accurately reflect the proportion of clinicians that will submit data as groups.

#### H. ICRs Regarding Burden for Cost (§414.1350)

The cost performance category relies on administrative claims data. For claims-based submitting, the Medicare Parts A and B claims submission process is used to collect data on resource measures from MIPS eligible clinicians. MIPS eligible clinicians are not asked to provide any documentation by CD or hardcopy. Therefore, under the cost performance category, we do not anticipate any new or additional submission requirements for MIPS eligible clinicians.

#### I. ICR Regarding Partial QP Elections for Advanced APMs

In the proposed rule, we discussed the MIPS-related submission requirements for participants in MIPS APMs. Advanced APM Entities may face an additional submission requirement under MIPS related to Partial QP elections. The final rule has changed the timing of when eligible clinicians in Advanced APMs receive notification about their Partial QP status, which reduced the burden estimates. Under the revised policy set forth in this final rule with comment period, Advanced APM participants will be notified about their QP or Partial QP status before the end of the performance period, whereas in the proposed rule, Advanced APM participants would not have been notified of their QP or Partial QP status until after the end of the submission period. If an Advanced APM Entity is notified its eligible clinicians are determined as a group to be Partial QPs, a representative from the Advanced APM Entity will log into the MIPS portal to indicate whether MIPS eligible clinicians determined to be Partial

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

QPs wish to participate in MIPS<sup>48</sup>. Our analyses of 2014 data indicate that nearly all Advanced APM participants would meet the QP threshold, and that no participants would be determined as a group to be Partial QPs. Hence, we assume that no Advanced APM Entities will face the data submission requirement in the 2017 performance period.

In addition, Affiliated Practitioners participating as gainsharers in the CJR model and assessed individually for purposes of the QP determination may face a data submission requirement for Partial QP elections. Under the proposed rule, we did not discuss the CJR model as potentially contributing to the burden for Partial QP elections. However, CMS has recently proposed changes to the CJR model in the proposed Advancing Care Coordination Through Episode Payment Models rule (81 FR 50794 through 28364) that, if finalized, would allow the CJR model to meet the Advanced APM criteria. Because CMS will assess Affiliated Practitioners in the CJR model individually, Affiliated Practitioners must make a Partial QP election at the individual eligible clinician level if they are determined to be Partial QPs. We also estimate that CJR participants are much more likely to be Partial QPs than participants in other Advanced APMs. We therefore estimate that up to 12,800 individual participants in the CJR model may submit partial QP election data.

We estimate it will take each Advanced APM Entity representative or CJR model participant 15 minutes to make this election, and an additional 15 minutes to register for the MIPS Portal. As noted above, we assume that 12,800 participants in the CJR model and no Advanced APM Entities will make this election. Hence, we assume that 12,800 APM Entities' participants will make this election on the MIPS Portal, for a total burden estimate of 6,400 hours (12,800 participants X 0.5 hours). At a computer systems analyst's hourly labor cost, the total

---

<sup>48</sup> If the Advanced APM Entity or CJR model participant chooses not to make the election, the default is for the clinicians meeting the partial QP threshold to opt out of MIPS.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

burden cost of these elections is collectively estimated to be \$ 555,008 (6,400 X \$86.72/hour).

We did not receive any comments on the Partial QP election burden estimates. As noted above, we are adopting changes in the Partial QP burden estimates that reflect policy changes between the proposed rule and final rule with comment period, and the Advancing Care Coordination Through Episode Payment Models that, if finalized, would create a new Advanced APM.

**TABLE 55: Total Estimated Burden for Partial QP Election**

<b>Respondents</b>	<b>Responses</b>	<b>Burden per Response (Hours)</b>	<b>Total Annual Burden (Hours)</b>	<b>Hourly Labor Cost (\$)</b>	<b>Total Burden Cost (\$)</b>
12,800	12,800	0.5	6,400	\$86.72	\$555,008

J. Summary of Annual Burden Estimates

The total gross burden estimate includes the total burden of recordkeeping and data submission under MIPS. Table 56 provides an estimate of the total annual burden of MIPS of 10,947,453 hours and a total labor cost of reporting of \$1,311,245,806. Some of the information collection burden under MIPS does not represent an additional burden to the public, but replaces information collection burden that existed under two of its predecessor programs, the PQRS and the Medicare EHR Incentive Program. The estimated total existing burden approved for information collections related to PQRS and the Medicare EHR Incentive Program (for EPs) was 11,954,112hours for a total labor cost of reporting of \$1,318,689,857. The net burden estimate reflects only the incremental burden associated with this rule, and excludes the burden of existing recordkeeping and data submission under the PQRS, the Medicare EHR Incentive

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Program, CAHPS for PQRS, and PQRS Data Validation.<sup>49</sup> Mindful of the combined data submission burden of MIPS, we have sought to avoid duplication of data submission efforts and simplified data submission structures within the unified program. The streamlining and simplification of data submission structures is reflected in our net burden estimates, which show a reduction in burden of -1,006,658 burden hours and -\$7,444,051 labor cost of reporting compared to the existing information collections.

---

<sup>49</sup> The previously approved data collections OMB control numbers were as follows: PQRS (OCN 0938-1059), CAHPS for PQRS (OCN 0938-1222), and PQRS Data Validation (OCN 0938-1255) and the Objectives/Measures (EP) ICR in the EHR Incentive Program Stage III PRA under review at OMB (OCN 0938-1278).

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

We received one general comment regarding our calculations for the burden of the data submission requirements.

Comment: One commenter requested that CMS provide time and cost estimates for reading educational materials and attending educational sessions, learning which of the new reporting requirements apply to each practice, and the costs for practices with CEHRT vs. those without CEHRT.

Response: We agree that clinicians will need to review educational materials and attend outreach sessions to become familiar with the rule. We will use our extensive outreach efforts to improve clinician understanding to the greatest extent we can. The Regulatory Impact Analysis includes a general discussion of the potential costs to clinicians of meeting MIPS requirements. Because the Collection of Information section, by statute, discusses only the costs for submitting data, the costs of learning general information about the new requirements are not included. Hence, no changes were made to the burden estimate as a result of this comment.

In summary, no changes were made to the rule as a result of general comments on the burden estimates.

#### K. Submission of PRA-Related Comments

We have submitted a copy of this rule's information collection and recordkeeping requirements to OMB for review and approval. The requirements are not effective until they have been approved by the OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed above, please visit CMS's Web site at [www.cms.hhs.gov/PaperworkReductionActof1995](http://www.cms.hhs.gov/PaperworkReductionActof1995), or call the Reports Clearance Office at 410-786-1326.

We invite public comments on these potential information collection requirements. If you wish

Notice: If you need to access the information in this document with assistive technology, please email Wesley.Wei@cms.hhs.gov.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. #### **IV. Regulatory Impact Analysis**

##### **A. Statement of Need**

This final rule with comment period is necessary to make payment and policy changes under the PFS and to make statutorily-required changes under the MACRA. The MACRA's enactment consolidated certain aspects of physician quality data submission and performance programs into the new Merit-based Incentive Payment System (MIPS), including using certified EHR technology (section 1848(o) of the Act), the PQRS (sections 1848(k) and (m) of the Act), and the VM (section 1848(p) of the Act). These programs have been developed and most recently implemented by us as the Medicare EHR Incentive Program (80 FR 62761), the PQRS (80 FR 71135), and the VM (80 FR 71273). The MACRA's enactment altered the Medicare EHR Incentive Program such that the existing Medicare payment adjustment for EPs under section 1848(a)(7)(A) of the Act will end in CY 2018. Similarly, the MACRA ends the separate PQRS in CY 2018 and provides for the inclusion of various aspects of PQRS in MIPS, and sunsets the VM, ending it in CY 2018 and establishing certain aspects of the VM as a component of MIPS in CY 2019. Finally, the MACRA introduces incentive payment to eligible clinicians who become Qualifying APM Participants (QPs) through participation in Advanced APMs.

This consolidated program for MIPS eligible clinicians represents a new approach to the delivery of health care in this care setting aimed at reducing burden on Medicare-enrolled eligible clinicians, improving population health, lowering growth in overall health care costs, and providing clear incentives for the provision of the best quality care for Medicare beneficiaries. MIPS provides payment adjustments for MIPS eligible clinicians for providing value-driven health care services to their patients, and APMs offer a variety of opportunities that substantially alter the methods of payment for health care and enable clinicians to make fundamental changes to their day-to-day operations to improve the quality and reduce the cost of health care.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

## B. Overall Impact

We have examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-14), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimate, as discussed below in this section, that the PFS provisions included in this final rule with comment period will redistribute more than \$199 million in budget neutral payments in the initial performance year. In addition, this final rule with comment period will increase government outlays for the exceptional performance payments under MIPS (\$500 million), and incentive payments to QPs (approximately \$333-\$571 million). Therefore, we estimate that this rulemaking is “economically significant” as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we have prepared a RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners, and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

for small business status under the Small Business Administration (SBA) standards. (For details, see the SBA’s Web site at <http://www.sba.gov/content/table-smallbusiness-size-standards> (refer to the 620000 series)). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a “significant economic impact on a substantial number of small entities.” The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Approximately 95 percent of practitioners, other providers and suppliers are considered to be small entities, based upon the SBA standards. As shown later in this analysis, however, potential losses to MIPS eligible clinicians under the MIPS are a small percentage of their total Medicare Part B PFS revenue—4 percent in the initial payment year—though rising to as high as 9 percent in subsequent years. On average, clinicians’ Medicare billings are only about 23 percent of total revenue,<sup>50</sup> so even those MIPS eligible clinicians adversely affected by MIPS would rarely face losses in excess of 3 percent of revenues, the HHS standard for determining whether an economic effect is “significant.” (In order to determine whether a rule meets the RFA threshold of “significant” impact HHS has for many years used as a standard adverse effects that exceed 3 percent of either revenues or costs.) However, because there are so many affected MIPS eligible clinicians, even if only a small

---

<sup>50</sup> Based on National Health Expenditure Data, Physicians and Clinical Services Expenditures, <https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/NationalHealthExpendData/NationalHealthAccountsProjected.html>.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

proportion is significantly adversely affected, the number could be “substantial.” Therefore, we are unable to conclude that an Initial Regulatory Flexibility Analysis (IRFA) is not required. Accordingly, the analysis and discussion provided in this section, as well as elsewhere in this final rule with comment period, together meet the requirements for an IRFA. We note that whether or not a particular MIPS eligible clinician or other eligible clinician is adversely affected would depend in large part on the performance of that MIPS eligible clinician or other eligible clinician and that CMS will offer significant technical assistance to MIPS eligible clinicians and other eligible clinicians in meeting the new standards.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. We are not preparing an analysis for section 1102(b) of the Act because we have determined, and the Secretary certifies, that this final rule with comment period would not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits on state, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2016, that threshold is approximately \$146 million. This final rule with comment period would impose no mandates on state, local, or tribal governments or on the private sector because participation in Medicare is voluntary and because physicians and other clinicians have multiple options as to how they will participate under MIPS and discretion over their performance. Moreover, HHS interprets UMRA as

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

applying only to “unfunded” mandates. We do not interpret Medicare payment rules as being “unfunded mandates,” but simply as conditions for the receipt of payments from the federal government for providing services that meet federal standards. This interpretation applies whether the facilities or providers are private, state, local, or tribal.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. Since this regulation does not impose any costs on state or local governments, the requirements of Executive Order 13132 are not applicable.

We have prepared the following analysis, which together with the information provided in the rest of this final rule with comment period, meets all assessment requirements. The analysis explains the rationale for and purposes of this final rule with comment period; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we would use to minimize the burden on small entities. As indicated elsewhere in this final rule with comment period, we are implementing a variety of changes to our regulations, payments, or payment policies to implement statutory provisions. We provide information for each of the policy changes in the relevant sections of this final rule with comment period. We are unaware of any relevant federal rules that duplicate, overlap, or conflict with this final rule with comment period. The relevant sections of this final rule with comment period contain a description of significant alternatives if applicable.

### C. Changes in Medicare Payments

Section 101 of the MACRA, (1) repeals the SGR formula for physician payment updates in Medicare, and (2) requires that we establish MIPS for eligible clinicians under which the Secretary must use a MIPS eligible clinician’s final score to determine and apply a MIPS

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

payment adjustment factor to the clinician for a year.

Repealing the SGR formula eliminated significant and immediate problems with Medicare's annual PFS payment updates, including implausible payment reductions (such as the 21.2 percent decrease that was scheduled for April 1, 2015). The Office of the Actuary estimated that avoiding those payment reductions results in a budgetary cost of \$150.5 billion for fiscal years 2015 through 2025 compared to the prior law baseline. However, that cost is partially offset by other MACRA provisions that are estimated to have a net reduction in federal expenditures of \$47.7 billion, bringing the net cost of the legislation to \$102.8 billion.<sup>51 52</sup> The largest component of the MACRA costs is its replacement of scheduled reductions in physician payments with payment rates first frozen at 2015 levels and then increasing at a rate of 0.5 percent a year during CYs 2016 through 2019. The estimates in this RIA take those legislated rates as the baseline for the estimates we make as to the costs, benefits, and transfer effects of the regulation, with some data collection provisions taking effect in 2017 and substantial payment reforms first taking effect in 2019.

As required by the MACRA, overall payment rates for services for which payment is made under the PFS would remain at the 2019 level through 2025, but starting in 2019, the amounts paid to individual MIPS eligible clinicians and other eligible clinicians would be subject to adjustment through one of two mechanisms, depending on whether the MIPS eligible clinician or other eligible clinician meets the threshold for participation in Advanced APMs to be considered a Qualifying APM Participant (QP) or Partial QP, or is instead evaluated under

## MIPS.

### 1. Estimated Incentive Payments to QPs in Advanced APMs

For APMs, from 2019 through 2024, eligible clinicians receiving a substantial portion of their revenue through Advanced APMs and meeting other applicable requirements to become QPs would receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate payment amounts for Medicare covered professional services in the preceding year. The APM Incentive Payment is separate from, and in addition to, the payment for services furnished by an eligible clinician during that year. Eligible clinicians who become QPs would not receive a MIPS payment adjustment under the PFS. Eligible clinicians who do not become QPs, but meet a slightly lower threshold, would be deemed Partial QPs for that year, and may elect to report to and be scored under MIPS but do not receive the APM Incentive Payment. In the 2017 QP Performance Period, we define Partial QPs to be eligible clinicians in Advanced APMs who have at least 20 percent, but less than 25 percent, of their payments for Part B covered professional services through an Advanced APM Entity, or furnish Part B covered professional services to at least 10 percent, but less than 20 percent, of their Medicare beneficiaries through an Advanced APM Entity. If the Partial QP elects to be scored under MIPS, they would be subject to all MIPS requirements and would receive a MIPS payment adjustment. This adjustment may be positive or negative. If an eligible clinician does not meet either of those QP standards, the eligible clinician would be subject to MIPS and would report to MIPS and receive the corresponding MIPS payment adjustment.

Beginning in 2026, payment rates for clinicians who achieve QP status for a year would be increased each year by 0.75 percent, while payment rates for clinicians who do not achieve QP status would be increased each year by 0.25 percent. In addition, MIPS eligible clinicians would receive positive, neutral, or negative MIPS payment adjustments to their Part B payments

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

in a payment year based on performance during a prior performance period. Although the legislation establishes overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the initial payment year (2019) in detail. After 2019, while overall payment levels will be partially bounded, we have also acknowledged in the preamble that the Department will likely revise its quality and other payment measures and overall payment thresholds and other parameters as clinicians' behavior changes.

## 2. Estimated Numbers of Clinicians Eligible for MIPS

As discussed further in this final rule with comment period, we are finalizing requirements for MIPS that may result in the exclusion of certain clinicians for various reasons. For example, the MACRA requires us to restrict eligibility for the 2019 and 2020 MIPS payment year to selected clinician types as described in section II.E.1 of this final rule with comment period. Additionally, we are excluding eligible clinicians that do not exceed the low volume threshold as defined in section II.E.3 of this rule: those with \$30,000 or less in Part B allowed charges or 100 or fewer Medicare patients as measured at the TIN/NPI level for individual reporting, the TIN level for group reporting, and the APM Entity level for reporting under the APM scoring standard. We also exclude those who are newly enrolled to Medicare and those eligible clinicians who are QPs.

We projected the number of clinicians that would be excluded from MIPS due to their being QPs using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect APMs operating in 2017 that we indicated in the proposed rule would be Advanced APMs under proposed policies, including the Next Generation ACO Model, Comprehensive Primary Care (CPC) Plus, Comprehensive ESRD Care (CEC) Model, and the Shared Savings Program Tracks 2 and 3. We also factored in information about potential new Advanced APM opportunities

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

including the Advanced APM criteria finalized in §414.1415, of this final rule with comment period and the updates to the CJR model that were proposed in the Advancing Care Coordination Through Episode Payment Models proposed rule (81 FR 50794 through 28364). We also projected Advanced APM participation based on applicant counts and estimated acceptance rates to Advanced APMs that had open application periods as of September 2016. Finally, we used historical data to examine the extent to which Advanced APM participants would meet the QP thresholds of having at least 25 percent of their Part B covered professional services or at least 20 percent of their Medicare beneficiaries furnished Part B covered professional services through the Advanced APM Entity. We followed the methodologies for group determination of QP status outlined in section II.F.5 of this final rule with comment period, and we determined that all participants in the Advanced APMs that were in operation in 2014 and 2015 would have met the QP thresholds. Based on that information, we assumed that during the first QP Performance Period, the vast majority of eligible clinicians participating in Advanced APM would be QPs.<sup>53</sup>

Using those procedures, we estimated that between approximately 70,000 and 120,000 clinicians would become QPs in the transition year with total Part B allowed charges of approximately \$6,666 to \$11,428 million. We estimated that the total incentive payment of 5 percent of Part B allowed charges would be between approximately \$333 and \$571 million. In this regard, it is longstanding HHS policy not to attempt to predict the effects of future

---

<sup>53</sup> To estimate the percent of Advanced APM participants that meet the QP threshold using historical data, we identified APM Entities that participated in APMs that have similar design characteristics to those finalized for Advanced APMs in §414.1415. In 2014, those models included the Pioneer ACO Model (which will end in 2016), and Comprehensive Primary Care Initiative (CPC). We also included the CEC model, which began in 2015. Further, we assigned Shared Savings Program ACOs that existed in 2014 their 2016 track assignments because several ACOs have since transitioned to higher risk tracks. Next, we analyzed 2014 claims data to identify the APM Entities within each of those APMs to determine which of those APM Entities met the criteria for having at least 25 percent of their Part B covered professional services or 20 percent of their beneficiaries furnished Part B covered professional services through the APM Entity.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

rulemakings in order to maximize future Secretarial discretion over whether, and if so how, payment or other rules would be changed.

To estimate the number of clinicians that are not in MIPS due to their clinician type not being eligible, or exclusions due to the low-volume or newly-enrolled eligible clinicians, we began with a list of the clinicians participating in Medicare Part B in 2015.<sup>54</sup> We would like to note that we have used the most recent data available (2015 data) for these analyses where possible. In the instances where 2015 data is unavailable, we have used data from 2014 from the VM and other sources. We refined the number of eligible clinicians by restricting the sample to doctors of medicine, doctors of osteopathy, chiropractors, dentists, optometrists, podiatrists, nurse practitioners, physician assistants, certified registered nurse anesthetists, and clinical nurse specialists since those are the practitioner types that can be MIPS eligible clinicians for CY 2017 in accordance with section 1848(q)(1)(C) of the Act.

We estimated the number of excluded clinicians by identifying and counting the clinicians on this list who in 2015 (a) exceeded the low-volume threshold; or (b) were assumed to be newly enrolled in Medicare by virtue of having PFS charges in 2015 but not 2014. We have estimated the effects of these various exclusions in Table 57. More than half (53-57 percent) of 1,380,209 Medicare clinicians billing to Part B will be ineligible for or excluded from MIPS. The excluded or ineligible clinicians represent approximately one-fourth (22-27 percent) of allowed Medicare Part B charges.

According to National Health Expenditure data,<sup>55</sup> in 2014, payments for physician and

---

<sup>54</sup> We identified the clinicians (at TIN-NPI level) that had positive Part B allowed charges, a positive number of beneficiaries and a reported specialty NPPES data. Exception: for CAH-II only providers we included providers with CAH-II PFS allowed charges >0 and a specialty record; we did not have any beneficiary data or non-PFS charges for CAH II only providers.

<sup>55</sup> Physicians and Clinical Services Expenditures, <https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/NationalHealthExpendData/NationalHealthAccountsProjected.html>.

The document published in the Federal Register is the official HHS-approved document.

other clinician services totaled \$603.7 billion from all sources. Medicare paid \$138.4 billion of that amount. Based on the lower bound total in Table 57 of \$23,314 million in allowed charges for clinicians excluded from MIPS, we estimate that less than 17 percent of clinicians' Medicare Part B spending for services covered under the PFS will be excluded from MIPS, and less than 4 percent of all clinicians' spending from all sources will be excluded.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

**TABLE 57: Projected Number of Clinicians Ineligible For or Excluded From MIPS in CY 2017, By Reason\***

Reason for Exclusion	Medicare Clinicians (TIN/NPIs) Excluded	Count of Medicare Clinicians (TIN/NPIs) Remaining After Exclusion	Part B Allowed Charges Excluded (\$ in millions)	Part B Allowed Charges Remaining After Exclusion (\$ in millions)
ALL MEDICARE CLINICIANS BILLING PART B		1,380,209		\$104,674
Qualifying APM Participants (QPs)**	70,000 lower bound 120,000 upper bound	1,260,209 - 1,310,209	\$6,666-\$11,428	\$93,246-\$98,008
Ineligible Clinician Types***	199,308	1,060,901- 1,110,901	\$10,614	\$82,632-\$87,394
Newly-enrolled clinicians****	85,268	975,633-1,025,633	\$1,283	\$81,349-\$86,111
Low-volume clinicians*****	383,514	592,119-642,119	\$4,751	\$76,598-\$81,360
<b>TOTAL EXCLUDED MEDICARE CLINICIANS</b>	<b>738,090-788,090</b>		<b>\$23,314-\$28,076</b>	
<b>PERCENT EXCLUDED</b>	<b>53-57%</b>		<b>22-27%</b>	

\*Allowed charges for covered services of the clinician under Part B.

2015 data used to estimate 2017 performance. Payments estimated using 2015 dollars.

\*\* QPs have at least 25 percent of their Medicare Part B covered professional services or least 20 percent of their Medicare beneficiaries furnished part B covered professional services through an Advanced APM. The upper bound estimate for QPs also reflects that a small number of Advanced APM participants may be Partial Qualifying APM Participants (Partial QPs) that opt to be excluded from MIPS. For MIPS Year 1, Partial QPs are APM participants that have at least 20 percent, but less than 25 percent, of their Medicare Part B covered professional services through an Advanced APM Entity, or at least 10 percent, but less than 20 percent, of their Medicare beneficiaries furnished part B covered professional services through an Advanced APM Entity.

\*\*\*Section 1848(q)(1)(C) of the Act defines a MIPS eligible clinician for payment years 1 and 2 as a physician, physician’s assistant, nurse practitioner, or clinical nurse anesthetist, or a group that includes such clinicians.(See section I.E.1 for further details) Our estimates of ineligible clinician types count clinician types who received part B payments but are not listed as eligible clinicians in the Act for payment year 1 or 2.

\*\*\*\*Newly enrolled Medicare clinicians in our data had allowed PFS charges in CY 2015 but the NPI did not have allowed PFS charges in CY 2014.

\*\*\*\*\*Low-volume clinicians have less than or equal to \$30,000 in allowed Medicare Part B charges or less than or equal to 100 Medicare patients.

We have estimated the number of clinicians that we believe will be excluded from MIPS in CY 2017 by specialty. Our estimates follow in Table 58. The estimates in Table 58 are based on clinicians in eligible specialties that were excluded because they were newly enrolled, QPs, or met the proposed low-volume exclusion. However, due to data limitations, the estimates in Table

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

58 include only a portion of the 70,000-120,000 QPs that are listed in Table 57.<sup>56</sup>

Among eligible clinicians, Table 58 shows that the percent excluded from MIPS varies widely across specialties, ranging from a low of 16.8 percent in gastroenterology to a high of 90.2 percent for chiropractors.

We have also estimated the numbers of eligible clinicians that will be excluded from MIPS in CY 2017 by practice size as shown in Table 59. Eligible clinicians in small practices are much more likely to be excluded from MIPS than those in larger practices. For example, more than half (51.6 percent) of eligible clinicians in practices of 1-9 clinicians will be excluded from MIPS, whereas about one-fourth (27.3 percent) of eligible clinicians in practices of 100 or more clinicians will be excluded.

---

<sup>56</sup> The QP estimates in Table 58 are counts of eligible clinicians that participated in the three APMs that were in effect in 2015 and meet the criteria for Advanced APMs, that is, CPC initiative and Pioneer ACO Model. (In our 2015 data, the Pioneer ACO Model serves as a proxy for its successor, the Next Generation ACO Model; similarly, the CPC initiative serves as a proxy for its successor, CPC+). Due to data limitations, the QP estimates in Table 58 do not count Shared Savings Program Tracks 2 and 3 participants in Advanced APMs that were implemented after 2015, including CEC, Comprehensive Primary Care Plus, and changes to the CJR model proposed in the Advancing Care Coordination Through Episode Payment Models proposed rule (81 FR 50794 through 28364). In contrast, the QP estimate in Table 57 includes publicly announced APMs that will be implemented in 2016 or 2017.

### 3. Estimated Impacts on Payments to MIPS Eligible Clinicians

Based on the estimates of excluded clinicians in Table 57, we estimate that between approximately 592,119 and 642,119 eligible clinicians will be required to submit MIPS data to CMS in year 1.<sup>57</sup> They are clinicians with eligible clinician types that (a) are not QPs participating in Advanced APMs (b) exceeded the low volume threshold and (c) have been enrolled as Medicare physicians for more than 1 year.

Payment impacts in this final rule with comment period reflect averages by specialty and practice size based on Medicare utilization. The payment impact for a MIPS eligible clinician could vary from the average and would depend on the mix of services that the MIPS eligible clinician furnishes. The average percentage change in total revenues would be less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients. In addition, MIPS eligible clinicians may receive substantial Medicare revenues for services under other Medicare payment systems that would not be affected by MIPS payment adjustment factors.

In order to estimate the impact of MIPS on clinicians required to report, we used the most recently available data, including data from 2015 PQRS, NPPES data and other available data to model the scoring provisions described in this regulation. First, we arithmetically calculated a hypothetical final score for each MIPS eligible clinician based on quality performance. Because the cost performance category has a zero percent weight for the initial payment year, we did not include any cost measures in the final score. Because of the lack of historical data for the

---

<sup>57</sup> Because our model assigned final scores using data from the quality performance category, our model did not assign final scores to 21,764 eligible clinicians who are eligible for MIPS, but reported measures groups which is no longer continuing in MIPS. However, these eligible clinicians may be scored on advancing care information and improvement activities, and those two performance categories could not be modeled at this time given limited historical data.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

advancing care information and improvement activities measures, the model does not estimate scores for the advancing care information and improvement activities performance categories either.

Then, we implemented an exchange function based on the provisions of this final rule with comment period to translate the hypothetical final score into a negative MIPS payment adjustment or positive MIPS payment adjustment. This entailed modifying parameters of the exchange function iteratively in order to achieve distributions in MIPS payment adjustments that meet requirements related to budget neutrality and aggregate exceptional performance payment amounts using a 3 point performance threshold and a 70 point additional performance threshold.

Given the wide diversity of clinical practices, the initial development period of the Quality Payment Program implementation was designed to allow physicians to pick their pace of participation for the first performance period that begins January 1, 2017. Eligible clinicians will have three flexible options to submit data to MIPS and a fourth option to join Advanced APMs in order to become QPs, all of which would ensure they do not receive a negative payment adjustment in 2019. With the extensive changes to policy and flexibility, estimating impacts of this final rule with comment period using only historic 2015 quality submission data significantly overestimates the impact on clinicians, particularly on clinicians in practices with 1-9 clinicians, which have traditionally had lower participation rates. In order to assess the sensitivity of the impact to the participation rate, we have prepared two sets of analyses.

The first analysis, which we label as “standard participation assumptions,” relies on the assumption that policy goals are designed to encourage a minimum 90 percent of MIPS eligible clinicians to participate, regardless of practice size. Therefore, we assumed that, on average, the categories of practices with 1-9 clinicians and practices with 10-24 clinicians would have 90 percent participation. This assumption is an increase from existing historical data. PQRS

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

participation rates have increased steadily since the program began; the 2014 PQRS experience report showed an increase in the participation rate from 15 percent in 2007 to 62 percent in 2014<sup>58</sup>. In 2015, among those eligible for MIPS, 87.2 percent participated in the PQRS. In 2015, MIPS eligible practices of less than 10 clinicians participated in the PQRS at a rate of 58.2 percent, and MIPS eligible practices of 10-24 clinicians participated in the PQRS at a rate of 83.7 percent. Because practices of 25-99 clinicians have a 92.6 percent participation rate based on historical data and practices of 100+ clinicians have a 98.5 percent participation rate, we assumed the average participation rates of those categories of clinicians would be the same as under the 2015 PQRS. Our assumption of 90 percent average participation for the categories of practices with 1-9 or 10-24 clinicians reflects our belief that small and solo practices will respond to this final rule with comment period's flexibility, reduced data submission burden, financial incentives, the support they will receive through technical assistance by participating at a rate close to that of other practice sizes, enhancing the existing upward trend in quality data submission rates. Therefore, we assume that the quality scores assigned to new participants reflect the distribution of MIPS quality scores.

The second analysis, which we label as "alternative participation assumptions," assumes a minimum participation rate of 80 percent. Because the 2015 PQRS participation rates for practices of more than 10 clinicians are greater than 80 percent, this analysis assumes increased participation for practices of 1-9 clinicians. Practices of more than 10 clinicians are included in the model at their historic participation rates.

Table 60 summarizes the impact on Part B services of MIPS eligible clinicians by specialty for the standard participation assumptions. Table 61 summarizes the impact on Part B

---

<sup>58</sup> 2014 PQRS Experience Report at [https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2014\\_PQRS\\_Experience\\_Rpt.pdf](https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2014_PQRS_Experience_Rpt.pdf).

services of MIPS eligible clinicians by specialty under the alternative participation assumptions.

Tables 62 and 63 summarize the impact on Part B services of MIPS eligible clinicians by practice size for the standard participation assumptions (Table 62) and the alternative participation assumptions (Table 63).

Tables 60 and 62 show that under our standard participation assumptions, the vast majority (94.7percent) of MIPS eligible clinicians are anticipated to receive positive or neutral payment adjustments for the 2019 MIPS payment year, with only 5.3 percent receiving negative MIPS payment adjustments. Using the alternative participation assumptions, Table 63 shows that 91.9 percent of MIPS eligible clinicians are expected to receive positive or neutral payment adjustments. Due to limitations of modeling the new payment policies using historic data, it is not possible to differentiate between positive and neutral adjustment expectations. However, in both the standard and alternative assumptions, participating practices of all sizes are expected to experience a neutral or small net positive impact in the 2019 MIPS payment year.

The distribution of funds reflects this final rule with comment period's emphasis on increasing participation of MIPS eligible clinicians for the transition year of MIPS, which creates a ramp to more robust participation in future MIPS performance years.

The following policy changes were made between the proposed and final rule with comment period to support that emphasis: modifying the low-volume threshold to exclude more clinicians, modifying the performance threshold to 3 for the initial payment year, and adding a performance floor on quality measure benchmarks.

<b>Surgery</b>											
<b>Urology</b>	8,956	\$1,924	95.1%	95.1%	4.9%	\$5	\$11	\$16	-\$4	\$12	0.6%
<b>Vascular Surgery</b>	3,080	\$871	94.5%	94.5%	5.5%	\$2	\$5	\$7	-\$2	\$6	0.6%

Notes:

Standard scoring model assumes that a minimum of 90 percent of clinicians within each practice size category would participate in quality data submission.

\*2015 data used to estimate 2017 performance. Payments estimated using 2015 dollars.

\*\* The Net Impact to Payments is the combined impact of negative and positive adjustments and the exceptional performance payment.

\*\*\*The estimated number of MIPS eligible clinicians subject to reporting requirements are based on QP eligibility model estimates. The number of clinicians in the scoring model exceeded the upper bound estimate of MIPS eligible clinicians due to discrepancies between scoring model data on QPs and QP eligibility model estimates.

\*\*\*\* Specialty descriptions as self-reported in the National Plan and Provider Enumeration System (NPPES). Note that all categories are mutually exclusive, including General Practice and Family Practice. Family Medicine physicians self-report as being in 'Family Practice' in NPPES.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Notes:

Practice size is the total number of MIPS eligible TIN/NPIs in a TIN.

Alternative scoring model assumes that a minimum of 80 percent of clinicians within each practice size category would participate in quality data submission.

\* 2015 data used to estimate 2017 performance. Payments estimated using 2015 dollars.

\*\* The Net Impact to Payments is the combined impact of negative and positive MIPS payment adjustments and the exceptional performance payment.

\*\*\*The estimated number of MIPS eligible clinicians subject to reporting requirements are based on QP eligibility model estimates. The number of clinicians in the scoring model exceeded the upper bound estimate of MIPS eligible clinicians due to discrepancies between scoring model data on QPs and QP eligibility model estimates.

\*\*\*\* Specialty descriptions as self-reported in the National Plan and Provider Enumeration System (NPPES) at the time of issuance of a National Provider Identifier (NPI). Note that all categories are mutually exclusive, including General Practice and Family Practice. 'Family Medicine' is used here for physicians listed as 'Family Practice' in NPPES.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

We received several comments about the data used in the RIA.

Comment: Several commenters noted that the 2014 data used in the RIA was not representative of the 2019 MIPS payment year of MIPS. One commenter requested that CMS use 2015 data for its RIA estimates.

Response: The RIA has been updated as requested, to the extent feasible, with 2015 data, which is the most recently available data. The claims-based readmission measures are still based on 2014 data. The identification of newly enrolled Medicare clinicians is based on both 2014 and 2015 data, and the estimated number of QPs and their allowed charges is based on 2014, 2015, and more recent data.

In summary, in response to comments, the RIA was updated with more recent data where feasible.

#### 4. Potential Impact of Advancing Care Information Score

As noted earlier, our impact does not include either the advancing care information or the improvement activities performance categories. The proposed rule discussed preliminary data on potential advancing care information scores (81 FR 28370). While we estimate the final score using only the quality performance category score, we recognize the final scores for the 2019 MIPS payment year would be estimated using advancing care information and improvement activities data.

The costs for implementation and complying with the advancing care information performance category requirements could potentially lead to higher operational expenses for MIPS eligible clinicians. However, we believe that the combination of MIPS payment adjustments and long-term overall gains in efficiency will likely offset the initial expenditures. Because section II.E.5.g of this final rule with comment period establishes a policy to reweight the advancing care information performance category scores for MIPS eligible clinicians that

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

were exempt from the Medicare EHR Incentive Program or received hardship exemptions (see 81 FR 28232), the final rule with comment period would not impose additional requirements for EHR adoption during the transition year. Health IT vendors may face additional costs in the transition year of MIPS if they choose to develop additional capabilities in their systems in order to submit advancing care information and improvement activities performance category data on behalf of MIPS eligible clinicians.

Additionally, we believe a majority of MIPS eligible clinicians who are able to report the advancing care information performance category of MIPS have already adopted an EHR during Stage 1 and 2 of the prior Medicare EHR Incentive Program. As we have stated with respect to the Medicare EHR Incentive Program, we believe that future retrospective studies on the costs to implement an EHR and the return on investment (ROI) will demonstrate efficiency improvements that offset the actual costs incurred by MIPS eligible clinicians participating in MIPS and specifically in the advancing care information performance category, but we are unable to quantify those costs and benefits at this time.

At present, evidence on EHR benefits in either improving quality of care or reducing health care costs is mixed. This is not surprising since the adoption of EHR as a fully functioning part of medical practice is progressing, with numerous areas of adoption, use, and sophistication demonstrating need for improvement. Even physicians and hospitals that can meet Medicare EHR Incentive Program standards have not necessarily fully implemented all the functionality of their systems or fully exploited the diagnostic, prescribing, and coordination of care capabilities that these systems promise. Moreover, many of the most important benefits of EHR depend on interoperability among systems and this functionality is still lacking in many EHR systems. A recent RAND report prepared for the ONC reviewed 236 recent studies that related the use of health IT to quality, safety, and efficacy in ambulatory and non-ambulatory care settings and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

found that—

A majority of studies that evaluated the effects of health IT on healthcare quality, safety, and efficiency reported findings that were at least partially positive. These studies evaluated several forms of health IT: metrics of satisfaction, care process, and cost and health outcomes across many different care settings ...Our findings agree with previous [research] suggesting that health IT, particularly those functionalities included in the Medicare EHR Incentive Program regulation, can improve healthcare quality and safety. The relationship between health IT and [health care] efficiency is complex and remains poorly documented or understood, particularly in terms of healthcare costs, which are highly dependent upon the care delivery and financial context in which the technology is implemented.<sup>59</sup>

Other recent studies have not found definitive quantitative evidence of benefits.<sup>60</sup> The proposed rule requested comments providing better evidence concerning EHR benefits in reducing the costs or increasing the value of EHR-supported health care. No commenters provided evidence concerning EHR benefits in reducing the costs or increasing the value of EHR-supported health care.

Similarly, the costs for implementation and complying with the improvement activities performance category requirements could potentially lead to higher expenses for MIPS eligible clinicians. Costs per full-time equivalent primary care clinician for improvement activities will vary across practices, including for some activities or certified patient-centered medical home practices, in incremental costs per encounter, and in estimated costs per member per month. Costs may vary based on panel size and location of practice among other variables. For example, Magill (2015), conducted a study of certified patient-centered medical home practices in two states.<sup>61</sup> Magill (2015), found that costs associated with a full-time equivalent primary

Bharga and Abhay Nath Mishra, “Electronic Medical Records and Physician Productivity: Evidence from Panel Data Analysis,” Management Science, July 2014.

<sup>61</sup> Magill et. al. “The Cost of Sustaining a Patient-Centered Medical Home: Experience from 2 States.” Annals of Family Medicine, 2015; 13:429-435.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

care clinician, who were associated with certified patient-centered medical home practices, varied across practices. Specifically, Magill (2015) found an average of \$7,691 per month in Utah practices, and an average of \$9,658 in Colorado practices. Consequently, certified patient-centered medical home practices incremental costs per encounter were \$32.71 in Utah and \$36.68 in Colorado (Magill, 2015). Magill (2015) also found that the average estimated cost per member, per month, for an assumed panel of 2,000 patients was \$3.85 in Utah and \$4.83 in Colorado. However, given the lack of comprehensive historical data for proposed improvement activities, we are unable to quantify those costs in detail at this time. The proposed rule requested public comments on the costs associated with improvement activities from practices that have implemented clinical practice improvements in the past. No commenters provided specific cost estimates of improvement activities.

#### D. Impact on Beneficiaries

There are a number of changes in this final rule with comment period that would have an effect on beneficiaries. In general, we believe that the changes will have a positive impact and improve the quality and value of care provided to Medicare beneficiaries.

More broadly, we expect that over time clinician engagement in the Quality Payment Program will increasingly result in improved quality of care, resulting in lower morbidity and mortality, and in reduced spending, as physicians respond to the incentives offered by MIPS and APMs and adjust their clinical practices in order to maximize their performance on specified quality measures and activities. The various shared savings initiatives already operating have demonstrated that all three outcomes are possible. For example, in August of 2015, we issued 2014 quality and financial performance results showing that Medicare ACOs continue to improve the quality of care for Medicare beneficiaries while generating net savings to the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Medicare trust fund as well as shared savings to some model participants.<sup>62</sup> In 2014, the 20 ACOs in the Pioneer ACO Model and 333 Shared Savings Program ACOs generated more than \$411 million in total savings, which includes all ACOs' savings and losses. Additionally, in their first years of implementation, both Pioneer and Shared Savings Program ACOs had higher quality care than Medicare FFS providers on measures for which comparable data were available. Shared Savings Program patients with multiple chronic conditions and with high predicted Medicare spending received better quality care than comparable FFS patients.<sup>63</sup> Between the first and third performance periods, Pioneer ACOs improved their average quality score from 73 percent to 87 percent. The Shared Savings Program ACOs yielded \$465 million in savings to the Medicare Trust Funds in 2014.<sup>64</sup>

Results from the first year of the CPC Initiative indicate that it has generated nearly enough savings in Medicare health care expenditures to offset care management fees paid by CMS. The primary sources of the savings were reduced rates of hospital admissions and ED visits. The bulk of the savings was generated by patients in the highest-risk quartile, but favorable results were also seen in other patients. Over 90 percent of practices successfully met all first-year transformation requirements. The expenditure impact estimates differ across the seven regions. Additional time and data are needed to assess impact on care quality. The results from the first year of the CPC Initiative should be interpreted cautiously as effects are emerging earlier than anticipated, and additional research is needed to assess how the initiative affects cost

<sup>64</sup> The cost savings were for the second year of Shared Savings Program implementation and the third year of Pioneer ACO implementation. <https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2015-Fact-sheets-items/2015-08-25.html>.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

and quality of care beyond the first year. Because the effects of the CPC Initiative are likely to be larger in subsequent years, these early results suggest it is likely the model will eventually break even or generate savings.<sup>65</sup>

Basing payment in part on performance metrics is still an evolving art and, as discussed throughout this preamble, there are multiple variables and as yet no definitive answers as to what combinations of measures, benchmarks, and other variables will achieve the best results over time. Accordingly, we are unable at this time to provide specific dollar estimates of these benefits and cost reductions.

#### E. Impact on Other Health Care Programs and Providers

The MIPS is aimed at Medicare FFS physicians and other clinicians paid under the PFS. These physicians and other clinicians are almost all engaged in serving patients covered by other payers as well. Because Medicare covers only about one in seven persons (though a considerably higher share of total healthcare spending, since older persons incur far higher expenses on average than younger persons), for most of those services that will be subject to MIPS payment adjustments, Medicare provides only a fraction of practice revenues. Moreover, it is unlikely that many insurance payers will adopt MIPS or MIPS-like payment models in the short run. Hence, MIPS incentives are necessarily attenuated. On the other hand, changing practices for one group of patients will possibly lead to changes for other patients (for example, EHR systems are almost always used for all patients served by a physician). Physicians and other clinicians may find it simpler and more efficient to adopt clinical practice improvements for all patients, regardless of payer, in response to the Quality Payment Program's incentives, through the use of both MIPS measures and activities and APMs. Furthermore, since the Quality

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Payment Program eventually rewards participation in APMs based on services furnished to patients beyond those in Medicare, other payers may start to develop more models in which clinicians and patients can participate. Hence, there are likely to be beneficial effects on a far broader range of patients in the health care system than simply Medicare patients, and we believe those effects would include improved health care quality and lower costs over time. However, we have no basis at this time for quantifying such effects.

We note that large proportions of the Medicare and Medicaid programs are already delivered through capitated insurance payments to HMOs, PPOs, and related organizations. The Medicare Advantage Plans and related State programs therefore already have substantial incentives to improve quality and reduce costs. MIPS does not affect provider payments under those programs directly, which have their own reimbursement mechanisms for physicians and other clinicians. In many but not all cases, those insurance carriers do use incentive mechanisms that are similar in purpose and design to the kinds of APMs that we expect will arise under the new payment adjustments. We would not expect major near-term changes in HMO and PPO payment arrangements, or performance, from any MIPS or APM spillover effects. Regardless, we have no basis at this time for quantifying any such effects.

There are other potentially affected provider entities, including hospitals, skilled nursing facilities, CAHs (largely small rural hospitals), and providers serving unique populations, such as providers of tribal health care services. In none of these cases do we believe that MIPS would have significant effects on substantial numbers of providers. But to the extent that MIPS and increasing participation in APMs over time succeed in improving quality and reducing costs, there may be some beneficial effects not only on patients but also on some providers.

As noted previously in this section of the final rule with comment period, and as discussed in this subsection, we have concluded that financial effects on either directly or

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

indirectly affected small entities, including rural hospitals, will be minimal. We welcomed comments on these conclusions.

The following is summary of the comments we received regarding the financial effects on either directly or indirectly affected small entities, including rural hospitals.

Comment: Many commenters expressed concerns that the proposed rule would have negative financial consequences on small or solo practices, practices in rural and medically underserved areas, small hospital systems, primary care practices, and practices treating medically complex patients. Several commenters recommended policies to address the disparate effect on small and solo practices.

Response: As noted above, in response to many public comments, we implemented several policy changes that reduced the impact of this final rule with comment period on small and solo practices, including modifying the low-volume threshold to reduce the burden for small and solo practices. Further, this final rule with comment period's scoring provisions are designed to encourage participation, incentivize continuous improvement, and move participants on a glide path to improved health care delivery in the quality payment program. The RIA has been modified to reflect these policy changes, and shows that this final rule with comment period does not have disparate effects of small and solo practices that participate in reporting.

Comment: Several commenters were concerned that the negative effects of small/solo practices would be discriminatory against racial/ethnic minority physicians or racial/ethnic minority/patients. One commenter noted that Hispanic physicians were more likely to be in small and solo practices, and Hispanic and non-English speaking patients were more likely to be treated for small and solo practices, and recommended that small and solo practices be protected for their diversity value. Further, one commenter stated the rule would have a negative impact on inner city clinics and lower-income patients.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Response: As noted above, we implemented several policy changes designed to address the commenters' concerns. The RIA has been modified to reflect these policy changes, and our modeling shows that the rule does not have disparate effects of small and solo practices that participate in reporting.

Comment: Many commenters believed that the rule was administratively complex and confusing, and increased administrative burden for clinicians, especially small and solo practices, and rural practices, including hospitals.

Response: We have taken numerous steps to simplify the Quality Payment Program, particularly for the transition. For example, as discussed in II.E.5.f.(3) and II.E.5.g.(6) of this final rule with comment period, the advancing care information and improvement activities performance category reporting requirements have been simplified between the proposed and final rule with comment period. We do not believe, however, that our general discussion of the potential costs of implementing the rule need further modification.

Comment: Several commenters expressed concerns about the increased administrative costs and potential detrimental effects to IHS and Tribal providers. Several commenters requested clarification on the extent to which the proposed rule requirements would affect IHS and tribal providers. Two commenters requested clarification on the extent to which the RIA tables included IHS and tribal providers, and requested further analyses if they were not included. Several commenters recommended provisions to limit any detrimental impact to IHS and tribal providers including: excluding them from MIPS, accepting the measures they report to other programs, technical assistance, separate benchmarks, and non-putative approaches to compliance.

Response: As we stated in the proposed rule, we continue to believe that the Quality Payment Program will not have significant effects on substantial numbers of providers of tribal

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

health care services. Because the data used for our scoring model does not identify tribal and IHS providers, we are unable to estimate the amount of MIPS payments for those providers.

While tribal and IHS provided care is not covered under MACRA, physicians working in tribal or IHS health facilities may be eligible for MACRA if they treat Medicare beneficiaries.

However, we believe the number of IHS and tribal providers that will be covered under MACRA will be small, especially because many of those clinicians will not exceed the low-volume threshold. We will consider whether we should adopt any policies aimed specifically at IHS and other tribal providers in the future.

We will consider whether we should adopt any policies aimed specifically at IHS and other tribal providers in the future.

Comment: Many commenters noted the high cost of implementing EHRs and Health IT, particularly for small, solo, or rural clinicians. Several commenters noted that Medicare does not reimburse physicians for the time required to implement or use EHRs and other Health IT. Several commenters noted their practices had spent large amounts of money to comply with the previous EHR Incentive Program requirements, and expressed frustration that they needed to spend additional funds to comply with the new requirements.

Response: As we noted in the CY 2012 PFS final rule (76 FR 73464), we believe some eligible clinicians will incur costs associated with purchasing an EHR product if they have not purchased them already. However, we do not believe that the majority of eligible clinicians will purchase an EHR solely for the purpose of participating in MIPS.

We understand commenters' concerns about the costs of purchasing and implementing EHR systems in order to participate in MIPS. In response to public comments, we have further simplified the advancing care information reporting requirement and modified the low-volume threshold to exclude more small and solo clinicians with few encounters and low Medicare

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

allowed costs.

In summary, we received many comments about the potential impacts of the rule on small, solo, or rural clinicians. In response to many comments, we modified the low-volume threshold to increase the number of small, solo, and rural clinicians exempt from MIPS requirements. Further, as a result of comments, we have decided to finalize policies throughout the rule, which will focus the Quality Payment Program in its transition year on encouraging participation and educating clinicians while minimizing the risks for negative MIPS payment adjustment. The transition year policies will create a ramp to more robust participation in future years. The policy changes are reflected in the RIA estimates, which show that the risk for negative MIPS payment adjustment is minimal for MIPS eligible clinicians, including small and solo practices that participate.

#### F. Alternatives Considered

This final rule with comment period contains a range of policies, including many provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies where discretion has been exercised, presents our rationale for our finalized policies and, where relevant, analyzes alternatives that we considered. Although it is hard to single out any one alternative for public comment, the proposed rule particularly called attention to and requested comments on the performance threshold and the level at which it is set for scoring purposes under MIPS.

As described previously, under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, which may be

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary. Section 1848(q)(6)(D)(iii) of the Act outlines a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under paragraph (A) and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under paragraph (C), each of which shall be based on a period prior to the performance periods and take into account data available with respect to performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary.

Depending on where the threshold is set within those parameters, the proportions and distributions of MIPS eligible clinicians receiving payment reductions versus positive payment adjustments can change dramatically from our estimates. For example, in Table 60, we estimated (based on available data) that 3.7 percent of Colon/Rectal Surgery specialists will receive a negative payment adjustment under MIPS. Setting the performance threshold at a lower level would enable more Colon/Rectal Surgery specialists to avoid negative MIPS payment adjustments and potentially qualify for more positive MIPS payment adjustments. Conversely, we estimated above that 96.7 percent of Interventional Radiology specialists would receive a positive MIPS payment adjustment under the current proposal. Setting the performance threshold at a higher level would result in fewer Interventional Radiology specialists qualifying for positive MIPS payment adjustments, and potentially more of them receiving negative MIPS payment adjustments. But any payment changes resulting from changes to the performance threshold policy will depend primarily on changes to practices and other responses from MIPS eligible clinicians.

The proposed rule requested comment on these alternatives, on all previous estimates of

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

effects, and on any other issues or options that might improve the substantive effects of this proposed rule, or our estimates of those effects. We were particularly interested in comments on any aspects of this proposed rule that might inadvertently or unintentionally create adverse effects on the delivery of high quality and high value health care, and on options that might reduce such effects.

Comments on the alternatives to the proposed performance threshold are discussed in section II.E.7.c. of this final rule with comment period.

### G. Assumptions and Limitations

We would like to note several limitations to the analyses that estimated MIPS eligible clinicians' eligibility, negative MIPS payment adjustments, and positive payment adjustments based for the first MIPS performance period (2017) based primarily on 2015 data described above:

- The scoring model cannot fully reflect MIPS eligible clinicians' behavioral responses to MIPS. The scoring model assumes higher participation in MIPS quality reporting than under the PQRS. Other potential behavioral responses are not addressed in our scoring model. The scoring model assumes that quality measures submitted and the distribution of scores on those measures would be similar under the transition year as they were under the 2015 PQRS program.
- Limited historical data for two performance categories. Because we have limited historical data for the proposed advancing care information and improvement activities performance categories, the modeled scoring estimates were based solely on quality measures. Our scoring model estimates do not include advancing care information or improvement activities performance category scores.
- The scoring model does not reflect the growth in Advanced APM participation between 2015 and 2017. Due to data limitations, the scoring model could only identify clinicians that

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

participated in APMs that may have been determined to be Advanced APM in 2015 were they operating in 2017. Several new APMs that we anticipate will be Advanced APM have been implemented or will be implemented between 2015 and 2017. Further, some eligible clinicians will join the successors of APMs already in existence in 2015. In contrast to the scoring model, the CMS Innovation Center's QP estimates use methods that do reflect projected growth in APM participation between 2015 and 2017.

There are additional limitations to our estimates. To the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Tables 60-63. Due the limitations above, there is considerable uncertainty around our estimates that is difficult to quantify in detail.

#### H. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Table 64 (Accounting Statement), we have prepared an accounting statement.

We have not attempted to quantify the benefits of this rule because of the many uncertainties as to both clinician behaviors and resulting effects on patient health and cost reductions. For example, the applicable percentage for MIPS incentives changes over time, increasing from 4 percent in 2019 to 9 percent in 2022 and subsequent years, and we are unable to estimate precisely how physicians will respond to the increasing incentives. As noted above, in CY 2019, we estimate that we will distribute approximately \$199 million in payment adjustments on a budget-neutral basis, which represents the applicable percent for 2019 required under section 1848(q)(6)(B)(i) of the Act and excludes \$500 million in exceptional performance payments. In 2020, section 1848(q)(6)(B)(ii) of the Act specifies that the applicable percent will

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

be 5 percent, which we estimate would mean that we will distribute approximately \$249 million in payment adjustments on a budget-neutral basis, ignoring changes in clinical practice, volume growth, inflation, or other changes that may affect Medicare physician payments, effects of changes in data submission practices, advancing care information scores, and innovation activities scores, as well as the \$500 million in exceptional performance payments. Finally, in 2021, section 1848(q)(6)(B)(iii) of the Act specifies that the applicable percent will be 7 percent, which we estimate would mean that we will distribute approximately \$435 million in payment adjustments on a budget-neutral basis, again ignoring changes in clinical practice, volume growth, inflation or other changes that may affect Medicare physician payments, as well as the \$500 million in exceptional performance payments.

Further, the addition of new Advanced APMs and growth in Advanced APM participation over time will affect the pool of MIPS eligible clinicians, and for those that are MIPS eligible clinicians, may change their relative performance. The \$500 million available for exceptional performance and the 5 percent APM Incentive Payment for QPs are only available from 2019 through 2024. Beginning in 2026, payment for services furnished by QPs will receive a higher update than for services furnished by non-QPs. However, we are unable to estimate the number of QPs in those years, as we cannot project the number or types of Advanced APMs that will be made available in those years through future CMS initiatives proposed and implemented in those years, nor the number of QPs for those future Advanced APMs.

The percentage of the final score attributable to each performance category will change over time, and we will incorporate improvement scoring in future years. The Improvement activities category represents an entirely new category for measuring MIPS eligible clinicians' performance. We may also propose policy changes in future years as we continue implementing MIPS and as MIPS eligible clinicians accumulate experience with the new system. Moreover,

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

there are interactions between the MIPS and APM incentive programs and other shared savings and incentive programs that we cannot model or project. Nonetheless, even if ultimate savings and health benefits represent only low fractions of current experience, benefits are likely to be substantial in overall magnitude.

Table 64 includes our estimate for MIPS payment adjustments (\$199 million), the exceptional performance payments under MIPS (\$500 million), and incentive payments to QPs (using the range described in the preceding analysis, approximately \$333-\$571 million).

However, of these three elements, only the negative MIPS payment adjustments are shown as estimated decreases.

**TABLE 64: ACCOUNTING STATEMENT**

<b>Category</b>	<b>Transfers</b>
CY 2019 Annualized Monetized Transfers....	Estimated increase of between \$1,032 and \$1,270 million in payments for higher performance under MIPS and to QPs <sup>66</sup> .
From Whom to Whom?.....	Increased Federal Government payments to physicians, other practitioners and suppliers who receive payment under the Medicare Physician Fee Schedule.
<b>Category</b>	<b>Transfers</b>
CY 2019 Annualized Monetized Transfers....	Estimated decrease of \$199 million for lower performance under MIPS.
From Whom to Whom?.....	Reduced Federal Government payments to physicians, other practitioners and suppliers who receive payment under the Medicare Physician Fee Schedule.
Note: these estimates are identical under both a 7 percent and 3 percent discount rate.	

We received three comments in response to the estimated federal costs of implementing the rule in Table 64.

Based on National Health Expenditure data,<sup>67</sup> total Medicare expenditures for physician

<sup>66</sup> A range of estimates is provided due to uncertainty about the number of Advanced APM participants that will meet the QP threshold in 2016.

<sup>67</sup> Physicians and Clinical Services Expenditures, <https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/NationalHealthExpendData/NationalHealthAccountsProjected.html>.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

and clinical services in 2014 reached \$138.4 billion. Expenditures for physician and clinical services from all sources reached \$603.7 billion. Table 60 shows that the aggregate negative MIPS payment adjustment for all MIPS eligible clinicians under MIPS is estimated at \$199 million, which represents less than 0.2 percent of Medicare payments for physician and clinical services and less than 0.1 percent of payments for physician and clinician services from all sources. Table 60 also shows that the aggregate positive payment adjustment for MIPS eligible clinicians under MIPS is estimated at \$699 million (including additional MIPS payment adjustments for exceptional performance), which represents less than 1 percent of Medicare expenditures for physician and clinician services and 0.2 percent of expenditures from all sources for physician and clinical services.

Comment: One commenter requested that the government provide an estimate of its costs to implement the rule.

Response: Supporting Statement A of this rule's Paperwork Reduction Act package has a discussion of the cost to the government of implementing the rule. Hence, no revisions were made to the accounting table as result of this comment.

Comment: Two commenters noted the administrative complexity of meeting both federal Medicare and state Medicaid administrative requirements for dually eligible beneficiaries, those commenters requested that CMS factor dually eligible beneficiaries into its thinking about the timing of the MIPS and requested that CMS provide guidance to states on implementing the Quality Payment Program.

Response: We intend to work with the states during the MIPS' implementation, and will consider commenters' suggestions about policies with respect to dually-eligible beneficiaries in the future. No revisions were made to the accounting table as result of this comment.

In summary, after considering comments on government costs, no changes were made to

## **List of Subjects**

### 42 CFR Part 414

Administrative practice and procedure, Biologics, Drugs, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

### 42 CFR Part 495

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Reporting and recordkeeping requirements.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

## **PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES**

1. The authority citation for part 414 continues to read as follows:

**Authority:** Secs. 1102, 1871, and 1881(b)(1) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(1)).

### **§414.90 [Amended]**

2. In §414.90—

a. Amend paragraph (e) introductory text by removing the phrase “and subsequent years” and adding in its place the phrase “through 2018”; and

b. Amend paragraph (e)(1)(ii) by removing the phrase “and each subsequent year” and adding in its place the phrase “through 2018”.

3. Subpart O is added to part 414 to read as follows:

Subpart O—Merit-based Incentive Payment System and Alternative Payment Model Incentive  
Sec.

414.1300 Basis and scope.

414.1305 Definitions.

414.1310 Applicability.

414.1315 [Reserved]

414.1320 MIPS performance period.

414.1325 Data submission requirements.

414.1330 Quality performance category.

414.1335 Data submission criteria for the quality performance category.

414.1340 Data completeness criteria for the quality performance category.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

414.1350 Cost performance category.

414.1355 Improvement activities performance category.

414.1360 Data submission criteria for the improvement activities performance category.

414.1365 Subcategories for the improvement activities performance category.

414.1370 APM scoring standard for MIPS.

414.1375 Advancing care information performance category.

414.1380 Scoring.

414.1385 Targeted review and review limitations.

414.1390 Data validation and auditing.

414.1395 Public reporting.

414.1400 Third party data submission.

414.1405 Payment.

414.1410 Advanced APM determination.

414.1415 Advanced APM criteria.

414.1420 Other payer advanced APMs.

414.1425 Qualifying APM participant determination: In general.

414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

414.1435 Qualifying APM participant determination: Medicare option.

414.1440 Qualifying APM participant determination: All-payer combination option.

414.1445 Identification of other payer advanced APMs.

414.1450 APM incentive payment.

414.1455 Limitation on review.

414.1460 Monitoring and program integrity.

414.1465 Physician-focused payment models.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. ## **Subpart O — Merit-based Incentive Payment System and Alternative Payment Model**

### **Incentive**

#### **§414.1300 Basis and scope.**

(a) Basis. This subpart implements the following provisions of the Act:

(1) Section 1833(z)—Incentive Payments for Participation in Eligible Alternative Payment Models.

(2) Section 1848(a)—Payment for Physicians’ Services Based on Fee Schedule.

(3) Section 1848(k)—Quality Reporting System.

(4) Section 1848(q)—Merit-based Incentive Payment System.

(b) Scope. This subpart part sets forth the following:

(1) The circumstances under which eligible clinicians are not considered MIPS eligible clinicians with respect to a year.

(2) How individual MIPS eligible clinicians can have their performance assessed as a group.

(3) The data submission methods and data submission criteria for each of the MIPS performance categories.

(4) Methods for calculating a performance category score for each of the MIPS performance categories.

(5) Methods for calculating a MIPS final score and applying the MIPS payment adjustment to MIPS eligible clinicians.

(6) Requirements for an APM to be designated an “Advanced APM.”

(7) Methods for eligible clinicians and entities participating in Advanced APMs to meet the participation thresholds to become Qualifying APM Participants (QPs) and Partial QPs.

(8) Methods and processes for counting participation in Other Payer Advanced APMs in

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

making QP and Partial QP determinations.

(9) Methods for calculating and paying the APM Incentive Payment to QPs.

(10) Criteria for Physician-Focused Payment Models (PFPMs).

#### **§414.1305 Definitions.**

As used in this section, unless otherwise indicated—

Additional performance threshold means the numerical threshold for a MIPS payment year against which the final scores of MIPS eligible clinicians are compared to determine the additional MIPS payment adjustment factors for exceptional performance.

Advanced Alternative Payment Model (Advanced APM) means an APM that CMS determines meets the criteria set forth in §414.1415.

Advanced APM Entity means an APM Entity that participates in an Advanced APM or Other Payer Advanced APM.

Affiliated practitioner means an eligible clinician identified by a unique APM participant identifier on a CMS-maintained list who has a contractual relationship with the Advanced APM Entity for the purposes of supporting the Advanced APM Entity's quality or cost goals under the Advanced APM.

Affiliated practitioner list means the list of Affiliated Practitioners of an APM Entity that is compiled from a CMS-maintained list.

Alternative Payment Model (APM) means any of the following:

- (1) A model under section 1115A of the Act (other than a health care innovation award).
- (2) The shared savings program under section 1899 of the Act.
- (3) A demonstration under section 1866C of the Act.
- (4) A demonstration required by Federal law.

APM Entity means an entity that participates in an APM or payment arrangement with a

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

non-Medicare payer through a direct agreement or through Federal or State law or regulation.

APM Entity group means the group of eligible clinicians participating in an APM Entity, as identified by a combination of the APM identifier, APM Entity identifier, Taxpayer Identification Number (TIN), and National Provider Identifier (NPI) for each participating eligible clinician.

APM Incentive Payment means the lump sum incentive payment for a year paid to an eligible clinician who is a QP for the year from 2019 through 2024.

Attestation means a secure mechanism, specified by CMS, with respect to a particular performance period, whereby a MIPS eligible clinician or group may submit the required data for the advancing care information or the improvement activities performance categories of MIPS in a manner specified by CMS.

Attributed beneficiary means a beneficiary attributed to the Advanced APM Entity under the terms of the Advanced APM or Other Payer Advanced APM and listed as an attributed beneficiary on the latest available list of attributed beneficiaries at the time of a QP determination.

Attribution-eligible beneficiary means a beneficiary who during the QP Performance Period:

- (1) Is not enrolled in Medicare Advantage or a Medicare cost plan;
- (2) Does not have Medicare as a secondary payer;
- (3) Is enrolled in both Medicare Parts A and B;
- (4) Is at least 18 years of age;
- (5) Is a United States resident; and
- (6) Has a minimum of one claim for evaluation and management services furnished by an

eligible clinician who is in the APM Entity for any period during the QP Performance Period or,

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

for an Advanced APM that does not base attribution on evaluation and management services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for evaluation and management services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of evaluation and management and/or other services.

Certified Electronic Health Record Technology (CEHRT) means the following:

(1) For any calendar year before 2018, EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets one of the following:

(i) The 2014 Edition Base EHR definition (as defined at 45 CFR 170.102) and that has been certified to the certification criteria that are necessary to report on applicable objectives and measures specified for the MIPS advancing care information performance category, including the applicable measure calculation certification criterion at 45 CFR 170.314(g)(1) or (2) for all certification criteria that support an objective with a percentage-based measure.

(ii) Certification to—

(A) The following certification criteria:

(1) CPOE at—

(i) 45 CFR 170.314(a)(1), (18), (19) or (20); or

(ii) 45 CFR 170.315(a)(1), (2) or (3).

(2)(i) Record demographics at 45 CFR 170.314(a)(3); or

(ii) 45 CFR 170.315(a)(5).

(3)(i) Problem list at 45 CFR 170.314(a)(5); or

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(ii) 45 CFR 170.315(a)(6).

(4)(i) Medication list at 45 CFR 170.314(a)(6); or

(ii) 45 CFR 170.315(a)(7).

(5)(i) Medication allergy list 45 CFR 170.314(a)(7); or

(ii) 45 CFR 170.315(a)(8).

(6)(i) Clinical decision support at 45 CFR 170.314(a)(8); or

(ii) 45 CFR 170.315(a)(9).

(7) Health information exchange at transitions of care at one of the following:

(i) 45 CFR 170.314(b)(1) and (2).

(ii) 45 CFR 170.314(b)(1), (b)(2), and (h)(1).

(iii) 45 CFR 170.314(b)(1), (b)(2), and (b)(8).

(iv) 45 CFR 170.314(b)(1), (b)(2), (b)(8), and (h)(1).

(v) 45 CFR 170.314(b)(8) and (h)(1).

(vi) 45 CFR 170.314(b)(1), (b)(2), and 170.315(h)(2).

(vii) 45 CFR 170.314(b)(1), (b)(2), (h)(1), and 170.315(h)(2).

(viii) 45 CFR 170.314(b)(1), (b)(2), (b)(8), and 170.315(h)(2).

(ix) 45 CFR 170.314(b)(1), (b)(2), (b)(8), (h)(1), and 170.315(h)(2).

(x) 45 CFR 170.314(b)(8), (h)(1), and 170.315(h)(2).

(xi) 45 CFR 170.314(b)(1), (b)(2), and 170.315(b)(1).

(xii) 45 CFR 170.314(b)(1), (b)(2), (h)(1), and 170.315(b)(1).

(xiii) 45 CFR 170.314(b)(1), (b)(2), (b)(8), and 170.315(b)(1).

(xiv) 45 CFR 170.314(b)(1), (b)(2), (b)(8), (h)(1), and 170.315(b)(1).

(xv) 45 CFR 170.314(b)(8), (h)(1), and 170.315(b)(1).

(xvi) 45 CFR 170.314(b)(1), (b)(2), (b)(8), (h)(1), 170.315(b)(1), and 170.315(h)(1).

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(xvii) 45 CFR 170.314(b)(1), (b)(2), (b)(8), (h)(1), 170.315(b)(1), and 170.315(h)(2).

(xviii) 45 CFR 170.314(h)(1) and 170.315(b)(1).

(xix) 45 CFR 170.315(b)(1) and (h)(1).

(xx) 45 CFR 170.315(b)(1) and (h)(2).

(xxi) 45 CFR 170.315(b)(1), (h)(1), and (h)(2); and

(B) Clinical quality measures at—

(1) 45 CFR 170.314(c)(1) or 170.315(c)(1);

(2) 45 CFR 170.314(c)(2) or 170.315(c)(2);

(3) Clinical quality measure certification criteria that support the calculation and reporting of clinical quality measures at 45 CFR 170.314(c)(2) and (3) and optionally (4); or 45 CFR 170.315(c)(3)(i) and (ii) and optionally (c)(4); and can be electronically accepted by CMS if the data is submitted electronically.

(C) Privacy and security at—

(1) 45 CFR 170.314(d)(1) or 170.315(d)(1);

(2) 45 CFR 170.314(d)(2) or 170.315(d)(2);

(3) 45 CFR 170.314(d)(3) or 170.315(d)(3);

(4) 45 CFR 170.314(d)(4) or 170.315(d)(4);

(5) 45 CFR 170.314(d)(5) or 170.315(d)(5);

(6) 45 CFR 170.314(d)(6) or 170.315(d)(6);

(7) 45 CFR 170.314(d)(7) or 170.315(d)(7);

(8) 45 CFR 170.314(d)(8) or 170.315(d)(8); and

(D) The certification criteria that are necessary to report on applicable objectives and measures specified for the MIPS advancing care information performance category, including the applicable measure calculation certification criterion at 45 CFR 170.314(g)(1) or (2) or 45

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

CFR 170.315(g)(1) or (2) for all certification criteria that support an objective with a percentage-based measure.

(iii) The definition for 2018 and subsequent years specified in paragraph (2) of this definition.

(2) For 2018 and subsequent years, EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102) and has been certified to the 2015 Edition health IT certification criteria—

(i) At 45 CFR 170.315(a)(12) (family health history) and 45 CFR 170.315(e)(3) (patient health information capture); and

(ii) Necessary to report on applicable objectives and measures specified for the MIPS advancing care information performance category including the following:

(A) The applicable measure calculation certification criterion at 45 CFR 170.315(g)(1) or (2) for all certification criteria that support an objective with a percentage-based measure.

(B) Clinical quality measure certification criteria that support the calculation and reporting of clinical quality measures at 45 CFR 170.315(c)(2) and (c)(3)(i) and (ii) and optionally (c)(4), and can be electronically accepted by CMS.

CMS-approved survey vendor means a survey vendor that is approved by CMS for a particular performance period to administer the CAHPS for MIPS survey and to transmit survey measures data to CMS.

CMS Web Interface means a web product developed by CMS that is used by groups that have elected to utilize the CMS Web Interface to submit data on the MIPS measures and activities.

Covered professional services has the meaning given by section 1848(k)(3)(A) of the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Act.

Eligible clinician means “eligible professional” as defined in section 1848(k)(3) of the Act, as identified by a unique TIN and NPI combination and, includes any of the following:

- (1) A physician.
- (2) A practitioner described in section 1842(b)(18)(C) of the Act.
- (3) A physical or occupational therapist or a qualified speech-language pathologist.
- (4) A qualified audiologist (as defined in section 1861(l)(3)(B) of the Act).

Episode payment model means an APM or other payer arrangement designed to improve the efficiency and quality of care for an episode of care by bundling payment for services furnished to an individual over a defined period of time for a specific clinical condition or conditions.

Estimated aggregate payment amounts means the total payments to a QP for Medicare Part B covered professional services for the incentive payment base period, estimated by CMS as described in §414.1450(b).

Final score means a composite assessment (using a scoring scale of 0 to 100) for each MIPS eligible clinician for a performance period determined using the methodology for assessing the total performance of a MIPS eligible clinician according to performance standards for applicable measures and activities for each performance category. The final score is the sum of each of the products of each performance category score and each performance category’s assigned weight, multiplied by 100.

Group means a single TIN with two or more eligible clinicians (including at least one MIPS eligible clinician), as identified by their individual NPI, who have reassigned their billing rights to the TIN.

Health Professional Shortage Areas (HPSA) means areas as designated under section 1845

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

332(a)(1)(A) of the Public Health Service Act.

High priority measure means an outcome, appropriate use, patient safety, efficiency, patient experience, or care coordination quality measure.

Hospital-based MIPS eligible clinician is a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the Place of Service codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital or emergency room setting based on claims for a period prior to the performance period as specified by CMS.

Improvement activities means an activity that relevant MIPS eligible clinician, organizations and other relevant stakeholders identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes.

Incentive payment base period means the calendar year prior to the year in which CMS disburses the APM Incentive Payment.

Low-volume threshold means an individual MIPS eligible clinician or group who, during the low-volume threshold determination period, have Medicare Part B allowed charges less than or equal to \$30,000 or provides care for 100 or fewer Part B-enrolled Medicare beneficiaries.

Meaningful EHR user for MIPS means a MIPS eligible clinician who possesses CEHRT, uses the functionality of CEHRT, and reports on applicable objectives and measures specified for the advancing care information performance category for a performance period in the form and manner specified by CMS, supports information exchange and the prevention of health information blocking, and engages in activities related to supporting providers with the performance of CEHRT.

Measure benchmark means the level of performance that the MIPS eligible clinician is

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

assessed on for a specific performance period at the measures and activities level.

Medicaid APM means a payment arrangement authorized by a State Medicaid program that meets the criteria for an Other Payer Advanced APM under §414.1420(a).

Medical Home Model means an APM under section 1115A of the Act that is determined by CMS to have the following characteristics:

(1) The APM has a primary care focus with participants that primarily include primary care practices or multispecialty practices that include primary care physicians and practitioners and offer primary care services. For the purposes of this provision, primary care focus means the inclusion of specific design elements related to eligible clinicians practicing under one or more of the following Physician Specialty Codes: 01 General Practice; 08 Family Medicine; 11 Internal Medicine; 16 Obstetrics and Gynecology; 37 Pediatric Medicine; 38 Geriatric Medicine; 50 Nurse Practitioner; 89 Clinical Nurse Specialist; and 97 Physician Assistant;

(2) Empanelment of each patient to a primary clinician; and

(3) At least four of the following:

(i) Planned coordination of chronic and preventive care.

(ii) Patient access and continuity of care.

(iii) Risk-stratified care management.

(iv) Coordination of care across the medical neighborhood.

(v) Patient and caregiver engagement.

(vi) Shared decision-making.

(vii) Payment arrangements in addition to, or substituting for, fee-for-service payments (for example, shared savings or population-based payments).

Medicaid Medical Home Model means a payment arrangement under title XIX that CMS determines to have the following characteristics:

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(1) The payment arrangement has a primary care focus with participants that primarily include primary care practices or multispecialty practices that include primary care physicians and practitioners and offer primary care services. For the purposes of this provision, primary care focus means the inclusion of specific design elements related to eligible clinicians practicing under one or more of the following Physician Specialty Codes: 01 General Practice; 08 Family Medicine; 11 Internal Medicine; 16 Obstetrics and Gynecology; 37 Pediatric Medicine; 38 Geriatric Medicine; 50 Nurse Practitioner; 89 Clinical Nurse Specialist; and 97 Physician Assistant;

(2) Empanelment of each patient to a primary clinician; and

(3) At least four of the following:

(i) Planned coordination of chronic and preventive care.

(ii) Patient access and continuity.

(iii) Risk-stratified care management.

(iv) Coordination of care across the medical neighborhood.

(v) Patient and caregiver engagement.

(vi) Shared decision-making.

(vii) Payment arrangements in addition to, or substituting for, fee-for-service payments (for example, shared savings or population-based payments).

Merit-based Incentive Payment System (MIPS) means the program required by section 1848(q) of the Act.

MIPS APM means an APM that meets the criteria specified under §414.1370(b).

MIPS eligible clinician as identified by a unique billing TIN and NPI combination used to assess performance, means any of the following (excluding those identified at §414.1310(b)):

(1) A physician as defined in section 1861(r) of the Act.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(2) A physician assistant, a nurse practitioner, and clinical nurse specialist as such terms are defined in section 1861(aa)(5) of the Act.

(3) A certified registered nurse anesthetist as defined in section 1861(bb)(2) of the Act.

(4) A group that includes such clinicians.

MIPS payment year means a calendar year in which the MIPS payment adjustment factor, and if applicable the additional MIPS payment adjustment factor, are applied to Medicare Part B payments.

New Medicare-Enrolled MIPS eligible clinician means an eligible clinician who first becomes a Medicare-enrolled eligible clinician within the Provider Enrollment, Chain and Ownership System (PECOS) during the performance period for a year and had not previously submitted claims under Medicare as an individual, an entity, or a part of a physician group or under a different billing number or tax identifier.

Non-patient facing MIPS eligible clinician means an individual MIPS eligible clinician that bills 100 or fewer patient facing encounters (including Medicare telehealth services defined in section 1834(m) of the Act) during the non-patient facing determination period, and a group provided that more than 75 percent of the NPIs billing under the group's TIN meet the definition of a non-patient facing individual MIPS eligible clinician during the non-patient facing determination period.

Other Payer Advanced APM means a payment arrangement that meets the criteria set forth in §414.1420.

Other payer arrangement means a payment arrangement with any payer that is not an APM.

Partial Qualifying APM Participant (Partial QP) means an eligible clinician determined by CMS to have met the relevant Partial QP threshold under §414.1430(a)(2), (a)(4), (b)(2), and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(b)(4) for a year.

Partial QP patient count threshold means the minimum threshold score specified in §414.1430(a)(4) and (b)(4) that an eligible clinician must attain through a patient count methodology described in §§414.1435(b) and 414.1440(c) to become a Partial QP for a year.

Partial QP payment amount threshold means the minimum threshold score specified in §414.1430(a)(2) and (b)(2) that an eligible clinician must attain through a payment amount methodology described §§414.1435(a) and 414.1440(b) to become a Partial QP for a year.

Participation List means the list of participants in an APM Entity that is compiled from a CMS-maintained list.

Performance category score means the assessment of each MIPS eligible clinician's performance on the applicable measures and activities for a performance category for a performance period based on the performance standards for those measures and activities.

Performance standards means the level of performance and methodology that the MIPS eligible clinician is assessed on for a MIPS performance period at the measures and activities level for all MIPS performance categories.

Performance threshold means the numerical threshold for a MIPS payment year against which the final scores of MIPS eligible clinicians are compared to determine the MIPS payment adjustment factors.

Qualified Clinical Data Registry (QCDR) means a CMS-approved entity that has self-nominated and successfully completed a qualification process to determine whether the entity may collect medical or clinical data for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients.

Qualified registry means a medical registry, a maintenance of certification program operated by a specialty body of the American Board of Medical Specialties or other data

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

intermediary that, with respect to a particular performance period, has self-nominated and successfully completed a vetting process (as specified by CMS) to demonstrate its compliance with the MIPS qualification requirements specified by CMS for that performance period. The registry must have the requisite legal authority to submit MIPS data (as specified by CMS) on behalf of a MIPS eligible clinician or group to CMS.

QP patient count threshold means the minimum threshold score specified in §414.1430(a)(3) and (b)(3) that an eligible clinician must attain through a patient count methodology described in §§414.1435(b) and 414.1440(c) to become a QP for a year.

QP payment amount threshold means the minimum threshold score specified in §414.1430(a)(1) and (b)(1) that an eligible clinician must attain through the payment amount methodology described in §§414.1435(a) and 414.1440(b) to become a QP for a year.

QP Performance Period means the time period that CMS will use to assess the level of participation by an eligible clinician in Advanced APMs and Other Payer Advanced APMs for purposes of making a QP determination for the eligible clinician for the year as specified in §414.1425. The QP Performance Period begins on January 1 and ends on August 31 of the calendar year that is 2 years prior to the payment year.

Qualifying APM Participant (QP) means an eligible clinician determined by CMS to have met or exceeded the relevant QP payment amount or QP patient count threshold under §414.1430(a)(1), (a)(3), (b)(1) or (b)(3) for a year based on participation in an Advanced APM Entity.

Rural areas means clinicians in zip codes designated as rural, using the most recent HRSA Area Health Resource File data set available.

Small practices means practices consisting of 15 or fewer clinicians and solo practitioners.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Threshold Score means the percentage value that CMS determines for an eligible clinician based on the calculations described in §§414.1435 or 414.1440.

Topped out non-process measure means a measure where the Truncated Coefficient of Variation is less than 0.10 and the 75th and 90th percentiles are within 2 standard errors.

Topped out process measure means a measure with a median performance rate of 95 percent or higher.

#### **§414.1310 Applicability.**

(a) Program Implementation. Except as specified in paragraph (b) of this section, MIPS applies to payments for items and services furnished by MIPS eligible clinicians on or after January 1, 2019.

(b) Exclusions. (1) For a year, a MIPS eligible clinician does not include an eligible clinician who:

(i) Is a Qualifying APM Participant (as defined at §414.1305);

(ii) Is a Partial Qualifying APM Participant (as defined at §414.1305) and does not report on applicable measures and activities that are required to be reported under MIPS for any given performance period in a year; or

(iii) For the performance period with respect to a year, does not exceed the low-volume threshold as defined at §414.1305.

(2) Eligible clinicians, as defined at §414.1305, who are not MIPS eligible clinicians, as defined at §414.1305, have the option to voluntarily report measures and activities for MIPS.

(c) Treatment of new Medicare-enrolled eligible clinicians. New Medicare-enrolled eligible clinician, as defined at §414.1305, will not be treated as a MIPS eligible clinician until the subsequent year and the performance period for such subsequent year.

(d) Clarification. In no case will a MIPS payment adjustment apply to the items and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

services furnished during a year by individual eligible clinicians, as described in paragraphs (b) and (c) of this section, who are not MIPS eligible clinicians, including eligible clinicians who voluntarily report on applicable measures and activities specified under MIPS.

(e) Requirements for groups. (1) The following way is for individual eligible clinicians and individual MIPS eligible clinicians to have their performance assessed as a group:

(i) As part of a single TIN associated with two or more eligible clinicians (including at least one MIPS eligible clinician), as identified by a NPI, that have their Medicare billing rights reassigned to the TIN.

(ii) [Reserved]

(2) A group must meet the definition of a group at all times during the performance period for the MIPS payment year in order to have its performance assessed as a group.

(3) Eligible clinicians and MIPS eligible clinicians within a group must aggregate their performance data across the TIN in order for their performance to be assessed as a group.

(4) A group that elects to have its performance assessed as a group will be assessed as a group across all four MIPS performance categories.

(5) A group must adhere to an election process established and required by CMS.

#### **§414.1315 [Reserved]**

#### **§414.1320 MIPS performance period.**

(a) For purposes of the 2019 MIPS payment year, the performance period for all performance categories and submission mechanisms except for the cost performance category and data for the quality performance category reported through the CMS Web Interface, for the CAHPS for MIPS survey, and for the all-cause hospital readmission measure, is a minimum of a continuous 90-day period within CY 2017, up to and including the full CY 2017 (January 1, 2017 through December 31, 2017). For purposes of the 2019 MIPS payment year, for data

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

reported through the CMS Web Interface or the CAHPS for MIPS survey and administrative claims-based cost and quality measures, the performance period under MIPS is CY 2017 (January 1, 2017 through December 31, 2017).

(b) For purposes of the 2020 MIPS payment year, the performance period for:

(1) The quality and cost performance categories is CY 2018 (January 1, 2018 through December 31, 2018).

(2) The advancing care information and improvement activities performance categories is a minimum of a continuous 90-day period within CY 2018, up to and including the full CY 2018 (January 1, 2018 through December 31, 2018).

#### **§414.1325 Data submission requirements.**

(a) Data submission performance categories. MIPS eligible clinicians and groups must submit measures, objectives, and activities for the quality, improvement activities, and advancing care information performance categories.

(b) Data submission mechanisms for individual eligible clinicians. An individual MIPS eligible clinician may elect to submit their MIPS data using:

(1) A qualified registry for the quality, improvement activities, or advancing care information performance categories;

(2) The EHR submission mechanism (which includes submission of data by health IT vendors or other authorized providers on behalf of MIPS eligible clinicians) for the quality, improvement activities, or advancing care information performance categories;

(3) A QCDR for the quality, improvement activities, or advancing care information performance categories;

(4) Medicare Part B claims for the quality performance category; or

(5) Attestation for the improvement activities and advancing care information

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

performance categories.

(c) Data submission mechanisms for groups that are not reporting through an APM.

Groups may submit their MIPS data using:

(1) A qualified registry for the quality, improvement activities, or advancing care information performance categories;

(2) The EHR submission mechanism (which includes the submission of data by health IT vendors on behalf of groups) for the quality, improvement activities, or advancing care information performance categories;

(3) A QCDR for the quality, improvement activities, or advancing care information performance categories;

(4) A CMS Web Interface (for groups comprised of at least 25 MIPS eligible clinicians) for the quality, improvement activities, and advancing care information performance categories;

(5) Attestation for the improvement activities and advancing care information performance categories; or

(6) A CMS-approved survey vendor for groups that elect to include the CAHPS for MIPS survey as a quality measure. Groups that elect to include the CAHPS for MIPS survey as a quality measure must select one of the above data submission mechanisms to submit their other quality information.

(d) Requirement to use only one submission mechanism per performance category.

Except as described in paragraph (c)(6) of this section, MIPS eligible clinicians and groups may elect to submit information via multiple mechanisms; however, they must use the same identifier for all performance categories and they may only use one submission mechanism per

performance category. (e) No data submission requirements for the cost performance category and certain quality measures. There are no data submission requirements for the cost

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

performance category and for certain quality measures used to assess performance in the quality performance category. CMS will calculate performance on these measures using administrative claims data.

(f) Data submission deadlines for all submission mechanisms for individual eligible clinicians and groups for all performance categories. The submission deadlines are:

(1) For the qualified registry, QCDR, EHR, and attestation submission mechanisms are March 31 following the close of the performance period.

(2) For Medicare Part B claims, data must be submitted on claims with dates of service during the performance period that must be processed no later than 60 days following the close of the performance period.

(3) For the CMS Web Interface, data must be submitted during an 8-week period following the close of the performance period. The period must begin no earlier than January 2 and end no later than March 31.

**§414.1330 Quality performance category.**

(a) For purposes of assessing performance of MIPS eligible clinicians on the quality performance category, CMS will use:

(1) Quality measures included in the MIPS final list of quality measures.

(2) Quality measures used by QCDRs.

(b) Subject to CMS's authority to reweight performance category weights under section 1848(q)(5)(F) of the Act, performance in the quality performance category will comprise:

(1) 60 percent of a MIPS eligible clinician's final score for MIPS payment year 2019.

(2) 50 percent of a MIPS eligible clinician's final score for MIPS payment year 2020.

(3) 30 percent of a MIPS eligible clinician's final score for each MIPS payment year thereafter.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

**§414.1335 Data submission criteria for the quality performance category.**

(a) Criteria. A MIPS eligible clinician or group must submit data on MIPS quality measures in one of the following manners, as applicable:

(1) Via claims, qualified registry, EHR or QCDR submission mechanism. For the performance period—

(i) Submit data on at least six measures including at least one outcome measure. If an applicable outcome measure is not available, report one other high priority measure (appropriate use, patient safety, efficiency, patient experience, and care coordination measures). If fewer than six measures apply to the MIPS eligible clinician or group, report on each measure that is applicable.

(ii) Subject to paragraph (a)(1)(i) of this section, MIPS eligible clinicians and groups can either select their measures from the complete MIPS final measure list or a subset of that list, MIPS specialty-specific measure sets, as designated by CMS.

(2) Via the CMS Web Interface – for groups only. For the 12-month performance period-

(i) For a group of 25 or more MIPS eligible clinicians, report on all measures included in the CMS Web Interface. The group must report on the first 248 consecutively ranked beneficiaries in the sample for each measure or module.

(ii) If the sample of eligible assigned beneficiaries is less than 248, then the group must report on 100 percent of assigned beneficiaries. In some instances, the sampling methodology will not be able to assign at least 248 patients on which a group may report, particularly those groups on the smaller end of the range of 25–99 MIPS eligible clinicians.

(iii) The group is required to report on at least one measure for which there is Medicare patient data.

(iv) Groups reporting via the CMS Web Interface are required to report on all of the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

measures in the set.

(3) Via CMS-approved survey vendor for CAHPS for MIPS survey- for groups only. (i)

For the 12-month performance period, a group that wishes to voluntarily elect to participate in the CAHPS for MIPS survey measures must use a survey vendor that is approved by CMS for a particular performance period to transmit survey measures data to CMS.

(A) The CAHPS for MIPS survey counts for one measure towards the MIPS quality performance category and, as a patient experience measure, also fulfills the requirement to report at least one high priority measure in the absence of an applicable outcome measure.

(B) Groups that elect this data submission mechanism must select an additional group data submission mechanism in order to meet the data submission criteria for the MIPS quality performance category.

(ii) [Reserved]

(b) [Reserved]

**§414.1340 Data completeness criteria for the quality performance category.**

(a) MIPS eligible clinicians and groups submitting quality measures data using the QCDR, qualified registry, or EHR submission mechanism must submit data on:

(1) At least 50 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2019.

(2) At least 60 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2020.

(b) MIPS eligible clinicians submitting quality measures data using Medicare Part B claims, must submit data on:

(1) At least 50 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment year 2019.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(2) At least 60 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment year 2020.

(c) Groups submitting quality measures data using the CMS Web Interface or a CMS-approved survey vendor to submit the CAHPS for MIPS survey must meet the data submission requirement on the sample of the Medicare Part B patients CMS provides.

**§414.1350 Cost performance category.**

(a) For purposes of assessing performance of MIPS eligible clinicians on the cost performance category, CMS specifies cost measures for a performance period.

(b) Subject to CMS's authority to reweight performance category weights under section 1848(q)(5)(F) of the Act, performance in the cost performance category comprises:

(1) 0 percent of a MIPS eligible clinician's final score for MIPS payment year 2019.

(2) 10 percent of a MIPS eligible clinician's final score for MIPS payment year 2020.

(3) 30 percent of a MIPS eligible clinician's final score for each MIPS payment year thereafter.

**§414.1355 Improvement activities performance category.**

(a) For purposes of assessing performance of MIPS eligible clinicians on the improvement activities performance category, CMS specifies an inventory of measures and activities for a performance period.

(b) Subject to CMS's authority to reweight performance category weights under section 1848(q)(5)(F) of the Act, performance in the improvement activities performance category comprises:

(1) 15 percent of a MIPS eligible clinician's final score for MIPS payment year 2019 and for each MIPS payment year thereafter.

(2) [Reserved]

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(c) For purposes of assessing performance of MIPS eligible clinicians on the improvement activities performance category, CMS uses activities included in the improvement activities inventory established by CMS through rulemaking.

**§414.1360 Data submission criteria for the improvement activities performance category.**

(a) MIPS eligible clinicians must submit data on MIPS improvement activities in one of the following manners:

(1) Via qualified registry, EHR submission mechanisms, QCDR, CMS Web Interface or Attestation. For activities that are performed for at least a continuous 90-days during the performance period, MIPS eligible clinicians must—

(i) Submit a yes response for activities within the improvement activities inventory.

(ii) [Reserved]

(2) [Reserved]

(b) [Reserved]

**§414.1365 Subcategories for the improvement activities performance category.**

(a) The following are the list of subcategories, of which, with the exception of Participation in an APM, include activities for selection by a MIPS eligible clinician or group:

(1) Expanded practice access, such as same day appointments for urgent needs and after-hours access to clinician advice.

(2) Population management, such as monitoring health conditions of individuals to provide timely health care interventions or participation in a QCDR.

(3) Care coordination, such as timely communication of test results, timely exchange of clinical information to patients or other clinicians, and use of remote monitoring or telehealth.

(4) Beneficiary engagement, such as the establishment of care plans for individuals with complex care needs, beneficiary self-management assessment and training, and using shared

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

decision-making mechanisms.

(5) Patient safety and practice assessment, such as through the use of clinical or surgical checklists and practice assessments related to maintaining certification.

(6) Participation in an APM.

(7) Achieving health equity, such as for MIPS eligible clinicians that achieve high quality for underserved populations, including persons with behavioral health conditions, racial and ethnic minorities, sexual and gender minorities, people with disabilities, people living in rural areas, and people in geographic HPSAs.

(8) Emergency preparedness and response, such as measuring MIPS eligible clinician participation in the Medical Reserve Corps, measuring registration in the Emergency System for Advance Registration of Volunteer Health Professionals, measuring relevant reserve and active duty uniformed services MIPS eligible clinician activities, and measuring MIPS eligible clinician volunteer participation in domestic or international humanitarian medical relief work.

(9) Integrated behavioral and mental health, such as measuring or evaluating such practices as: co-location of behavioral health and primary care services; shared/integrated behavioral health and primary care records; cross-training of MIPS eligible clinicians, and integrating behavioral health with primary care to address substance use disorders or other behavioral health conditions, as well as integrating mental health with primary care.

(b) [Reserved]

**§414.1370 APM scoring standard under MIPS.**

(a) General. The APM scoring standard is the MIPS scoring methodology applicable for MIPS eligible clinicians identified on the Participation List for the performance period of an APM Entity participating in a MIPS APM.

(b) Criteria for MIPS APMs. MIPS APMs are those in which:

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(1) APM Entities participate in the APM under an agreement with CMS or through a law or regulation;

(2) The APM is designed such that APM Entities participating in the APM include at least one MIPS eligible clinician on a Participation List;

(3) The APM bases payment on cost/utilization and quality measures; and

(4) The APM is not either of the following:

(i) New APMs. An APM for which the first performance year begins after the first day of the MIPS performance period for the year.

(ii) APM in final year of operation for which the APM scoring standard is impracticable. An APM in the final year of operation for which CMS determines, within 60 days after the beginning of the MIPS performance period for the year, that it is impracticable for APM Entity groups to report to MIPS using the APM scoring standard.

(c) APM scoring standard performance period. The MIPS performance period under §414.1320 applies for the APM scoring standard.

(d) APM participant identifier. The APM participant identifier for an eligible clinician is the combination of four identifiers:

(1) APM identifier (established for the APM by CMS);

(2) APM Entity identifier (established for the APM Entity by CMS);

(3) Medicare-enrolled billing TIN; and

(4) Eligible clinician NPI.

(e) APM Entity group determination. The APM Entity group is determined in the manner prescribed in §414.1425(b)(1).

(f) APM Entity group scoring under the APM scoring standard. The MIPS final score calculated for the APM Entity group is applied to each MIPS eligible clinician in the APM Entity

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

group. The MIPS payment adjustment is applied at the TIN/NPI level for each of the MIPS eligible clinicians in the APM Entity group. In the event that a Shared Savings Program ACO does not report quality measures as required by the Shared Savings Program, the ACO participant TINs will each be considered a unique APM Entity for purposes of the APM scoring standard.

(g) MIPS performance category scoring under the APM scoring standard.

(1) Quality.

(i) MIPS APMs that require APM Entities to submit quality data using the CMS Web Interface. The MIPS performance category score for quality for a performance period will be calculated for the APM Entity group using the data submitted for the APM Entity through the CMS Web Interface according to the terms of the APM. In the event that a Shared Savings Program ACO does not report on quality measures as required by the Shared Savings Program, the ACO participant TINs must report data for the MIPS quality performance category according to the MIPS submission and reporting requirements.

(ii) [Reserved]

(2) Cost. The cost performance category weight is zero percent for APM Entity groups in MIPS APMs.

(3) Improvement activities.

(i) CMS assigns an improvement activities score for each MIPS APM for a performance period based on the requirements of the MIPS APM. The assigned improvement activities score applies to each APM Entity group in the MIPS APM for the performance year. In the event that the assigned score does not represent the maximum improvement activities score, APM Entities may report additional activities.

(ii) [Reserved]

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

**(4) Advancing care information.**

**(i) For APM Entity groups in the Shared Savings Program, each ACO participant TIN submits data on the advancing care information performance category as specified in §414.1375(b) and performance on the advancing care information performance category is assessed for the APM Entity group by calculating the weighted mean of the TIN level scores, weighted based on the number of MIPS eligible clinicians in the TINs as compared to the total number of MIPS eligible clinicians in the APM Entity group.**

(ii) For APM Entity groups in MIPS APMs other than the Shared Savings Program, CMS uses one score for each MIPS eligible clinician in the APM Entity group to derive a single average APM Entity group score for advancing care information. The score for each MIPS eligible clinician is the higher of either:

(A) A group score based on the measure data for the advancing care information performance category reported by a TIN for the MIPS eligible clinician according to the MIPS submission and reporting requirements for groups; or

(B) An individual score based on the measure data for the advancing care information performance category reported by the MIPS eligible clinician according to the MIPS submission and reporting requirements for individuals.

**(h) APM scoring standard performance category weights. The performance category weights used to calculate the final score for an APM Entity group are:**

**(1) Quality.**

**(i) For the Shared Savings Program and other MIPS APMs that require APM Entities to submit quality data through the CMS Web Interface: 50 percent.**

**(ii) For 2017, for MIPS APMs that do not require APM Entities to submit quality data through the CMS Web Interface: 0 percent.**

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(2) Cost. 0 percent.

(3) Improvement activities.

(i) For the Shared Savings Program and other MIPS APMs that require APM Entities to submit quality data through the CMS Web Interface: 20 percent.

(ii) For 2017, for MIPS APMs that do not require APM Entities to submit quality data through the CMS Web Interface: 25 percent.

(4) Advancing care information.

(i) For the Shared Savings Program and other MIPS APMs that require APM Entities to submit quality data through the CMS Web Interface: 30 percent.

(ii) For 2017, for MIPS APMs that do not require APM Entities to submit quality data through the CMS Web Interface: 75 percent.

#### **§414.1375 Advancing care information performance category.**

(a) Final score. Subject to CMS's authority to reweight performance category weights under section 1848(q)(5)(E)(ii) and (q)(5)(F) of the Act, performance in the advancing care information performance category will comprise 25 percent of a MIPS eligible clinician's final score for MIPS payment year 2019 and each MIPS payment year thereafter.

(b) Reporting for the advancing care information performance category: To earn a performance category score for the advancing care information performance category for inclusion in the final score, a MIPS eligible clinician must:

(1) CEHRT. Use CEHRT as defined at §414.1305 for the performance period;

(2) Report MIPS – advancing care information objectives and measures: Report on the objectives and associated measures as specified by CMS for the advancing care information performance category for the performance period as follows:

(i) Report the numerator (of at least one) and denominator, or yes/no statement as

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

applicable, for each required measure; or

(ii) Report a null value for each required measure that includes a null value as an acceptable result in the measure specification.

(3) Support information exchange and the prevention of health information blocking, and engage in activities related to supporting providers with the performance of CEHRT.

(i) Supporting providers with the performance of CEHRT (SPPC). To engage in activities related to supporting providers with the performance of CEHRT, the MIPS eligible clinician-

(A) Must attest that he or she:

(1) Acknowledges the requirement to cooperate in good faith with ONC direct review of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC direct review is received; and

(2) If requested, cooperated in good faith with ONC direct review of his or her health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meets (or can be used to meet) the definition of CEHRT, including by permitting timely access to such technology and demonstrating its capabilities as implemented and used by the MIPS eligible clinician in the field.

(B) Optionally, may also attest that he or she:

(1) Acknowledges the option to cooperate in good faith with ONC-ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC-ACB surveillance is received; and

(2) If requested, cooperated in good faith with ONC-ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meets (or can be

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

used to meet) the definition of CEHRT, including by permitting timely access to such technology and demonstrating its capabilities as implemented and used by the MIPS eligible clinician in the field.

(ii) Support for health information exchange and the prevention of information blocking.

The MIPS eligible clinician must attest to CMS that he or she—

(A) Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.

(B) Implemented technologies, standards, policies, practices, and agreements reasonably calculated to ensure, to the greatest extent practicable and permitted by law, that the certified EHR technology was, at all relevant times—

(1) Connected in accordance with applicable law;

(2) Compliant with all standards applicable to the exchange of information, including the standards, implementation specifications, and certification criteria adopted at 45 CFR part 170;

(3) Implemented in a manner that allowed for timely access by patients to their electronic health information; and

(4) Implemented in a manner that allowed for the timely, secure, and trusted bi-directional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj(3)), including unaffiliated providers, and with disparate certified EHR technology and health IT vendors.

(C) Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj(3)), and other persons, regardless of the requestor's affiliation or technology vendor.

**§414.1380 Scoring.**

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(a) General. MIPS eligible clinicians are scored under MIPS based on their performance on measures and activities in four performance categories. MIPS eligible clinicians are scored against performance standards for each performance category and receive a final score, composed of their scores on individual measures and activities, and calculated according to the final score methodology.

(1) Measures and activities in the four performance categories are scored against performance standards.

(i) For the quality performance category, measures are scored between zero and 10 points. Performance is measured against benchmarks. Bonus points are available for both submitting specific types of measures and submitting measures using end-to-end electronic reporting.

(ii) For the cost performance category, measures are scored between one and 10 points. Performance is measured against a benchmark.

(iii) For the improvement activities performance category, each improvement activity is worth a certain number of points. The points for each reported activity are summed and scored against a total potential performance category score of 40 points.

(iv) For the advancing care information performance category, the performance category score is the sum of a base score, performance score, and bonus score.

(2) [Reserved]

(b) Performance categories. MIPS eligible clinicians are scored under MIPS in four performance categories.

(1) Quality performance category. For the 2017 performance period. MIPS eligible clinicians receive three to ten achievement points for each scored quality measure in the quality performance category based on the MIPS eligible clinician's performance compared to measure

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

benchmarks. A MIPS quality measure must have a measure benchmark to be scored based on performance. MIPS quality measures that do not have a benchmark will not be scored based on performance. Instead, these measures will receive 3 points for the 2017 performance period.

(i) Measure benchmarks are based on historical performance for the measure based on a baseline period. Each benchmark must have a minimum of 20 individual clinicians or groups who reported the measure meeting the data completeness requirement and minimum case size criteria and performance greater than zero. We will restrict the benchmarks to data from MIPS eligible clinicians and comparable APM data, including data from QPs and Partial QPs.

(ii) Exception. If there is no comparable data from the baseline period, CMS would use information from the performance period to create measure benchmarks, which would not be published until after the performance period. For the 2017 performance period, CMS would use information from CY 2017 during which MIPS eligible clinicians may report for a minimum of any continuous 90-day period.

(A) CMS Web Interface submission uses benchmarks from the corresponding reporting year of the Shared Savings Program.

(B) [Reserved]

(iii) Separate benchmarks are used for the following submission mechanisms:

(A) EHR submission options;

(B) QCDR and qualified registry submission options;

(C) Claims submission options;

(D) CMS Web Interface submission options;

(E) CMS -approved survey vendor for CAHPS for MIPS submission options; and

(F) Administrative claims submission options.

(iv) Minimum case requirements for quality measures are 20 cases, unless a measure is

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

subject to an exception.

(v) Exception. The minimum case requirements for the all-cause hospital readmission measure is 200 cases.

(vi) MIPS eligible clinicians failing to report a measure required under this category receive zero points for that measure.

(vii) MIPS eligible clinicians do not receive zero points if the expected measure is submitted but is unable to be scored because it does not meet the required case minimum or if the measure does not have a measure benchmark for MIPS payment year 2019. Instead, these measures as well as measures that are below the data completeness requirement receive a score of 3 points in MIPS payment year 2019.

(viii) Exception: the administrative claims-based measures and CMS Web Interface measures will not be scored if these measures do not meet the required case minimum. For CMS Web Interface measures, we will recognize the measure was submitted but exclude the measure from being scored. For CMS Web Interface measures: measures that do not have a measure benchmark will also not be scored, although we will recognize that the measure was submitted, and measures that are below the data completeness requirement receive 0 points.

(ix) Measures submitted by MIPS eligible clinicians are scored using a percentile distribution, separated by decile categories.

(x) For each set of benchmarks, CMS calculates the decile breaks for measure performance and assigns points based on which benchmark decile range the MIPS eligible clinician's measure rate is between.

(xi) CMS assigns partial points based on the percentile distribution.

(xii) MIPS eligible clinicians are required to submit measures consistent with §414.1335.

(xiii) Bonus points are available for measures determined to be high priority measures

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

when two or more high priority measures are reported.

(A) Bonus points are not available for the first reported high priority measure which is required to be reported. To qualify for bonus points, each measure must be reported with sufficient case volume to meet the required case minimum and the required data completeness criteria and does not have a zero percent performance rate, regardless of whether it is included in the calculation of the quality performance category score.

(B) Outcome and patient experience measures receive two bonus points.

(C) Other high priority measures receive one bonus point.

(D) Bonus points for high priority measures cannot exceed 10 percent of the total possible points for MIPS payment year 2019 and 2020.

(xiv) One bonus point is also available for each measure submitted with end-to-end electronic reporting for a quality measure under certain criteria determined by the Secretary. Bonus points cannot exceed 10 percent of the total possible points for MIPS payment year 2019 and 2020.

(xv) A MIPS eligible clinician's quality performance category score is the sum of all the points assigned for the measures required for the quality performance category criteria plus the bonus points in paragraph (b)(1)(xiii) and bonus points in paragraph (b)(1)(xiv) of this section. The sum is divided by the sum of total possible points. The quality performance category score cannot exceed the total possible points for the quality performance category.

(2) Cost performance category. A MIPS eligible clinician receives one to ten achievement points for each cost measure attributed to the MIPS eligible clinician based on the MIPS eligible clinician's performance compared to the measure benchmark.

(i) Cost measure benchmarks are based on the performance period. Cost measures must have a benchmark to be scored.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(ii) A MIPS eligible clinician must meet the minimum case volume specified by CMS to be scored on a cost measure.

(iii) A MIPS eligible clinician's cost performance category score is the equally-weighted average of all scored cost measures.

(3) Improvement activities performance category. MIPS eligible clinicians and groups receive points for improvement activities based on patient-centered medical home or comparable specialty practice participation, APM participation, and improvement activities reported by the MIPS eligible clinician in comparison to the highest potential score (40 points) for a given MIPS year.

(i) CMS assigns credit for the total possible category score for each reported improvement activity based on two weights: medium-weighted; and high-weighted activities.

(ii) Improvement activities with a high weighting receive credit for 20 points, toward the total possible category score.

(iii) Improvement activities with a medium weighting receive credit for 10 points toward the total possible category score.

(iv) A MIPS eligible clinician or group in a practice that is certified as a patient-centered medical home or comparable specialty practice, as determined by the Secretary, receives full credit for performance on the improvement activities performance category. For purposes of this paragraph (b)(3)(iv), "full credit" means that the MIPS eligible clinician or group has met the highest potential score of 40 points. A practice is certified as a patient-centered medical home if it meets any of the following criteria:

(A) The practice has received accreditation from one of four accreditation organizations that are nationally recognized;

(1) The Accreditation Association for Ambulatory Health Care;

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(2) The National Committee for Quality Assurance (NCQA);

(3) The Joint Commission; or

(4) The Utilization Review Accreditation Commission (URAC).

(B) The practice is participating in a Medicaid Medical Home Model or Medical Home Model.

(C) The practice is a comparable specialty practice that has received the NCQA Patient-Centered Specialty Recognition.

(D) The practice has received accreditation from other certifying bodies that have certified a large number of medical organizations and meet national guidelines, as determined by the Secretary. The Secretary must determine that these certifying bodies must have 500 or more certified member practices, and require practices to include the following:

(1) Have a personal physician/clinician in a team-based practice.

(2) Have a whole-person orientation.

(3) Provide coordination or integrated care.

(4) Focus on quality and safety.

(5) Provide enhanced access.

(v) CMS compares the points associated with the reported activities against the highest potential category score of 40 points.

(vi) A MIPS eligible clinician or group's improvement activities category score is the sum of points for all of their reported activities, which is capped at 40 points, divided by the highest potential category score of 40 points.

(vii) Non-patient facing MIPS eligible clinicians and groups, small practices, and practices located in rural areas and geographic HPSAs receive full credit for improvement activities by selecting one high-weighted improvement activity or two medium-weighted

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

improvement activities. Non-patient facing MIPS eligible clinicians and groups, small practices, and practices located in rural areas and geographic HPSAs receive half credit for improvement activities by selecting one medium-weighted improvement activity.

(viii) To receive full credit as a certified patient-centered medical home or comparable specialty practice requires that a TIN that is reporting includes at least one practice which is a certified patient-centered medical home or comparable specialty practice.

(ix) MIPS eligible clinicians participating in APMs that are not patient-centered medical homes for a performance period shall earn a minimum score of one-half of the highest potential score for the improvement activities performance category.

(4) Advancing care information performance category. (i) A MIPS eligible clinician's advancing care information performance category score equals the sum of the base score, performance score, Public Health and Clinical Data Registry bonus score and completing improvement activities using CEHRT bonus score. The advancing care information performance category score will not exceed 100 percentage points.

(A) A MIPS eligible clinician earns a base score by reporting the numerator (of at least one) and denominator or yes/no statement or null value as applicable, for each required measure

(B) A MIPS eligible clinician earns a performance score by reporting on certain measures specified by CMS. MIPS eligible clinicians may earn up to 10 or 20 percentage points as specified by CMS for each measure reported for the performance score.

(C) A MIPS eligible clinician earn a bonus of five percentage points for reporting any measures beyond than the Immunization Registry Reporting measure for the Public Health and Clinical Data Registry objective.

(D) A MIPS eligible clinician earns a bonus of 10 percentage points for attesting to completing one or more improvement activities specified by CMS using CEHRT.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(ii) [Reserved]

(c) Final score calculation. Each MIPS eligible clinician receives a final score of 0 to 100 points equal to the sum of each of the products of each performance category score and each performance category's assigned weight, multiplied by 100.

(1) Performance category weights. Subject to CMS's authority to reweight, performance category weights under section 1848(q)(5)(F) of the Act:

(i) Quality performance category weight is defined under §414.1330(b).

(ii) Cost performance category weight is defined under §414.1350(b).

(iii) Improvement activities performance category weight is defined under §414.1355(b).

(iv) Advancing care information performance category weight is defined under §414.1375(a).

(2) Reweight the performance categories. If CMS determines there are not sufficient measures and activities applicable and available to MIPS eligible clinicians, CMS will assign weights to the performance categories that are different from the weights specified in §414.1380(c)(1).

(d) Scoring for APM entities. MIPS eligible clinicians in APM Entities that are subject to the APM scoring standard are scored using the methodology under §414.1370.

**§414.1385 Targeted review and review limitations.**

(a) Targeted review. MIPS eligible clinicians or groups may request a targeted review of the calculation of the MIPS payment adjustment factor under section 1848(q)(6)(A) of the Act and, as applicable, the calculation of the additional MIPS payment adjustment factor under section 1848(q)(6)(C) of the Act applicable to such MIPS eligible clinician or group for a year.

The process for targeted reviews is:

(1) MIPS eligible clinicians and groups have a 60-day period to submit a request for

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

targeted review, which begins on the day CMS makes available the MIPS payment adjustment factor, and if applicable the additional MIPS payment adjustment factor, for the MIPS payment year and ends on September 30 of the year prior to the MIPS payment year or a later date specified by CMS.

(2) CMS will respond to each request for targeted review timely submitted and determine whether a targeted review is warranted.

(3) The MIPS eligible clinician or group may include additional information in support of their request for targeted review at the time the request is submitted. If CMS requests additional information from the MIPS eligible clinician or group, it must be provided and received by CMS within 30 days of the request. Non-responsiveness to the request for additional information may result in the closure of the targeted review request, although the MIPS eligible clinician or group may submit another request for targeted review before the deadline.

(4) Decisions based on the targeted review are final, and there is no further review or appeal.

(b) Limitations on review. Except as specified in paragraph (a)(4) of this section, there is no administrative or judicial review under section 1869 or 1879 of the Act, or otherwise of—

(1) The methodology used to determine the amount of the MIPS payment adjustment factor and the amount of the additional MIPS payment adjustment factor and the determination of such amounts;

(2) The establishment of the performance standards and the performance period;

(3) The identification of measures and activities specified for a MIPS performance category and information made public or posted on the Physician Compare Internet Web site of the CMS; and

(4) The methodology developed that is used to calculate performance scores and the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

calculation of such scores, including the weighting of measures and activities under such methodology.

**§414.1390 Data validation and auditing.**

(a) General. CMS will selectively audit MIPS eligible clinicians and groups on a yearly basis. If a MIPS eligible clinician or group is selected for audit, the MIPS eligible clinician or group will be required to do the following in accordance with applicable law and timelines CMS establishes:

(1) Comply with data sharing requests, providing all data as requested by CMS or our designated entity. All data must be shared with CMS or our designated entity within 45 days of the data sharing request, or an alternate timeframe that is agreed to by CMS and the MIPS eligible clinician or group. Data will be submitted via email, facsimile, or an electronic method via a secure Web site maintained by CMS.

(2) Provide substantive, primary source documents as requested. These documents may include: copies of claims, medical records for applicable patients, or other resources used in the data calculations for MIPS measures, objectives, and activities. Primary source documentation also may include verification of records for Medicare and non-Medicare beneficiaries where applicable.

(b) [Reserved]

**§414.1395 Public reporting.**

(a) Public reporting of a MIPS eligible clinician's MIPS data. For each program year, CMS will post on a public website, in an easily understandable format, information regarding the performance of MIPS eligible clinicians or groups under the MIPS.

(b) [Reserved]

**§414.1400 Third party data submission.**

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(a) General. (1) MIPS data may be submitted by third party intermediaries on behalf of a MIPS eligible clinician or group by:

(i) A qualified registry;

(ii) A QCDR;

(iii) A health IT vendor or other authorized third party that obtains data from a MIPS eligible clinician's CEHRT; or

(iv) A CMS-approved survey vendor.

(2) Qualified registries, QCDRs, and health IT vendors or other authorized third parties may submit data on measures, activities, or objectives for any of the following MIPS performance categories:

(i) Quality;

(ii) Improvement activities; or

(iii) Advancing care information, if the MIPS eligible clinician or group is using CEHRT.

(3) CMS-approved survey vendors may submit data for the CAHPS for MIPS survey under the MIPS quality performance category.

(4) Third party intermediaries must meet all the criteria specified by CMS to qualify and be approved as a third party intermediary for purposes of MIPS, including, but not limited to, the following criteria:

(i) For measures, activities, and objectives under the quality, advancing care information, and improvement activities performance categories, if the data is derived from CEHRT, the QCDR, qualified registry, or health IT vendor must be able to indicate its data source.

(ii) All submitted data must be submitted in the form and manner specified by CMS.

(b) QCDR self-nomination criteria. QCDRs must self-nominate, for the 2017 performance period, from November 15, 2016 until January 15, 2017. For future years of the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

program, starting with the 2018 performance period, QCDRs must self-nominate from September 1 of the prior year until November 1 of the prior year. Entities that desire to qualify as a QCDR for the purposes of MIPS for a given performance period will need to self-nominate for that performance period and provide all information requested by CMS at the time of self-nomination. Having qualified as a QCDR does not automatically qualify the entity to participate in subsequent MIPS performance periods.

(c) Establishment of a QCDR entity. For an entity to become qualified for a given performance period as a QCDR, the entity must:

(1) Be in existence as of January 1 of the performance period for which the entity seeks to become a QCDR.

(2) Have at least 25 participants by January 1 of the performance period.

(d) Collaboration of entities to become a QCDR. In situations where an entity may not meet the criteria of a QCDR solely on its own but can do so in conjunction with another entity, the entity must also comply with the following:

(1) An entity that uses an external organization for purposes of data collection, calculation, or transmission may meet the definition of a QCDR as long as the entity has a signed, written agreement that specifically details the relationship and responsibilities of the entity with the external organization effective as of September 1 the year prior to the year for which the entity seeks to become a QCDR.

(2) [Reserved]

(e) Identifying non-MIPS quality measures. For purposes of QCDRs submitting data for the MIPS quality performance category, CMS considers the following types of quality measures to be non-MIPS quality measures:

(1) A measure that is not contained in the annual list of MIPS quality measures for the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

applicable performance period.

(2) A measure that may be in the annual list of MIPS quality measures but has substantive differences, as determined by the Secretary, in the manner it is reported by the QCDR.

(3) CAHPS for MIPS survey. Although the CAHPS for MIPS survey included in the MIPS measure set, we consider the changes that need to be made for reporting by individual MIPS eligible clinicians (and not as a part of a group) significant enough as to treat the CAHPS for MIPS survey as a non-MIPS quality measure for purposes of individual MIPS eligible clinicians reporting the CAHPS for MIPS survey via a QCDR.

(f) QCDR measure specifications criteria. A QCDR must provide specifications for each measure, activity, or objective the QCDR intends to submit to CMS. The QCDR must provide CMS descriptions and narrative specifications for each measure, activity, or objective no later than January 15 of the applicable performance period for which the QCDR wishes to submit quality measures or other performance category (improvement activities and advancing care information) data. In future years, starting with the 2018 performance period, those specifications must be provided to CMS by no later than November 1 prior to the applicable performance period for which the QCDR wishes to submit quality measures or other performance category (improvement activities and advancing care information) data.

(1) For non-MIPS quality measures, the quality measure specifications must include the following for each measure: name/title of measures, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. The narrative specifications provided must be similar to the narrative specifications we provide in our measures list. CMS will consider all non-MIPS quality measures submitted by the QCDR but

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

the measures must address a gap in care and outcome or other high priority measures are preferred. Documentation or “check box” measures are discouraged. Measures that have very high performance rates already or address extremely rare gaps in care (thereby allowing for little or no quality distinction between eligible clinicians) are also unlikely to be approved for inclusion.

(2) For MIPS quality measures, the QCDR only needs to submit the MIPS measure numbers or specialty-specific measure sets (if applicable).

(3) The QCDR must publicly post the measure specifications (no later than 15 days following CMS approval of the measure specifications) for each non-MIPS quality measure it intends to submit for MIPS. The QCDR may use any public format it prefers. Immediately following posting of the measures specification, the QCDR must provide CMS with the link to where this information is posted.

(g) Qualified registry self-nomination criteria. Qualified registries must self-nominate, for the 2017 performance period from November 15, 2016 until January 15, 2017. For future years of the program, starting with the 2018 performance period, the qualified registry must self-nominate from September 1 of the prior year until November 1 of the prior year. Entities that desire to qualify as a qualified registry for a given performance period must self-nominate and provide all information requested by CMS at the time of self-nomination. Having qualified as a qualified registry does not automatically qualify the entity to participate in subsequent MIPS performance periods.

(h) Establishment of a qualified registry entity. For an entity to become qualified for a given performance period as a qualified registry, the entity must:

(1) Be in existence as of January 1 of the performance period for which the entity seeks to become a qualified registry.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(2) Have at least 25 participants by January 1 of the performance period.

(i) CMS-approved survey vendor application criteria. Vendors are required to undergo the CMS approval process for each year in which the survey vendor seeks to transmit survey measures data to CMS. All CMS-approved survey vendor applications and materials will be due by April 30 of the performance period.

(j) Auditing of entities submitting MIPS data. Any third party intermediary (that is, a QCDR, health IT vendor, qualified registry, or CMS-approved survey vendor) must comply with the following procedures as a condition of their qualification and approval to participate in MIPS as a third party intermediary.

(1) The entity must make available to CMS the contact information of each MIPS eligible clinician or group on behalf of whom it submits data. The contact information will include, at a minimum, the MIPS eligible clinician or group's practice phone number, address, and, if available, email.

(2) The entity must retain all data submitted to CMS for MIPS for a minimum of 10 years.

(3) For the purposes of auditing, CMS may request any records or data retained for the purposes of MIPS for up to 6 years and 3 months.

(k) Probation and disqualification of a third party intermediary. (1) If at any time we determine that a third party intermediary (that is, a QCDR, health IT vendor, qualified registry, or CMS-approved survey vendor) has not met all of the applicable criteria for qualification and approval, CMS may place the third party intermediary on probation for the current performance period or the following performance period, as applicable.

(2) For purposes of this section, probation means that, for the applicable performance period, the third party intermediary must meet all applicable criteria for qualification and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

approval and must submit a corrective action plan for remediation or correction of any deficiencies identified by CMS that resulted in the probation.

(3) CMS requires a corrective action plan from the third party intermediary to address any deficiencies or issues and prevent them from recurring. The corrective action plan must be received and accepted by CMS within 14 days of the CMS notification to the third party intermediary of the deficiency or probation. If the corrective action plan is not received and accepted by CMS within the specified time, CMS may disqualify the third party intermediary from the MIPS program for the subsequent performance period.

(4) If the third party intermediary has data inaccuracies including (but not limited to) TIN/NPI mismatches, formatting issues, calculation errors, data audit discrepancies affecting in excess of 3 percent (but less than 5 percent) of the total number of MIPS eligible clinicians or groups submitted by the third party intermediary, such inaccuracies will trigger paragraph (k)(3) of this section and may result in this information being posted on the CMS website.

(5) If the third party intermediary does not reduce their data error rate below 3 percent for the subsequent performance period, the third party intermediary will continue to be on probation and have their listing on the CMS website continue to note the poor quality of the data they are submitting for MIPS for one additional year. After 2 years on probation, the third party intermediary will be disqualified for the subsequent performance period.

(6) Before placing the third party intermediary on probation; CMS would notify the third party intermediary of the identified issues, at the time of discovery of such issues.

(7) If the third party intermediary does not submit an acceptable corrective action plan within 14 days of notification of deficiencies, and correct the deficiencies within 30 days or before the submission deadline—whichever is sooner, CMS may disqualify the third party intermediary from participating in MIPS for the current performance period or the following

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

performance period, as applicable.

#### **§414.1405 Payment.**

(a) General. Each MIPS eligible clinician receives a MIPS payment adjustment factor, and if applicable an additional MIPS payment adjustment factor for exceptional performance, for a MIPS payment year determined by comparing their final score to the performance threshold and additional performance threshold for the year.

(b) Performance threshold. A performance threshold will be specified for each MIPS payment year.

(1) MIPS eligible clinicians with a final score at or above the performance threshold receive a zero or positive MIPS payment adjustment factor on a linear sliding scale such that an adjustment factor of 0 percent is assigned for a final score at the performance threshold and an adjustment factor of the applicable percent is assigned for a final score of 100.

(2) MIPS eligible clinicians with a final score below the performance threshold receive a negative MIPS payment adjustment factor on a linear sliding scale such that an adjustment factor of 0 percent is assigned for a final score at the performance threshold and an adjustment factor of the negative of the applicable percent is assigned for a final score of 0; further, MIPS eligible clinicians with final scores that are equal to or greater than zero, but not greater than one-fourth of the performance threshold, receive a negative MIPS payment adjustment factor that is equal to the negative of the applicable percent.

(3) A scaling factor not to exceed 3.0 may be applied to positive MIPS payment adjustment factors to ensure budget neutrality such that the estimated increase in aggregate allowed charges resulting from the application of the positive MIPS payment adjustment factors for the MIPS payment year equals the estimated decrease in aggregate allowed charges resulting from the application of negative MIPS payment adjustment factors for the MIPS payment year.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(c) Applicable percent. For MIPS payment year 2019, 4 percent. For MIPS payment year 2020, 5 percent. For MIPS payment year 2021, 7 percent. For MIPS payment year 2022 and each subsequent MIPS payment year, 9 percent.

(d) Additional performance threshold. An additional performance threshold will be specified for each of the MIPS payment years 2019 through 2024.

(1) In addition to the MIPS payment adjustment factor, MIPS eligible clinicians with a final score at or above the additional performance threshold receive an additional MIPS payment adjustment factor for exceptional performance on a linear sliding scale such that an additional adjustment factor of 0.5 percent is assigned for a final score at the additional performance threshold and an additional adjustment factor of 10 percent is assigned for a final score of 100, subject to the application of a scaling factor as determined by CMS, such that the estimated aggregate increase in payments resulting from the application of the additional MIPS payment adjustment factors for the MIPS payment year shall not exceed \$500,000,000 for each of the MIPS payment years 2019 through 2024.

(2) [Reserved]

(e) Application of adjustments to payments. For each MIPS payment year, the MIPS payment adjustment factor, and if applicable the additional MIPS payment adjustment factor, are applied to Medicare Part B payments for items and services furnished by the MIPS eligible clinician during the year.

#### **§414.1410 Advanced APM determination.**

(a) General. An APM is an Advanced APM for a payment year if CMS determines that it meets the criteria in §414.1415 during the QP Performance Period.

(b) Advanced APM and Other Payer Advanced APM determination process. CMS identifies Advanced APMs and Other Payer Advanced APMs in the following manner:

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(1) Advanced APM determination.

(i) No later than January 1, 2017, CMS will post on its website a list of all Advanced APMs for the first QP Performance Period.

(ii) CMS updates the Advanced APM list on its website at intervals no less than annually.

(iii) CMS will include notice of whether a new APM is an Advanced APM in the first public notice of the new APM.

(2) Other Payer Advanced APM determination.

(i) CMS identifies Other Payer Advanced APMs following conclusion of the QP Performance Period using information submitted to CMS according to §414.1445. CMS will not make determinations for other payer arrangements for which insufficient information is submitted.

(ii) CMS makes Other Payer Advanced APM determinations prior to QP determinations under §414.1440.

(iii) CMS makes final Other Payer Advanced APM determinations and notifies Advanced APM Entities and eligible clinicians of such determinations as soon as practicable.

**§414.1415 Advanced APM criteria.**

(a) Use of certified electronic health record technology (CEHRT).

(1) Required use of CEHRT. To be an Advanced APM, an APM must:

(i) Require at least 50 percent of eligible clinicians in each participating APM Entity group, or, for APMs in which hospitals are the APM Entities, each hospital, to use CEHRT to document and communicate clinical care to their patients or other health care providers; or

(ii) For the Shared Savings Program, apply a penalty or reward to an APM Entity based on the degree of the use of CEHRT of the eligible clinicians in the APM Entity.

(b) Payment based on quality measures.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(1) To be an Advanced APM, an APM must include quality measure results as a factor when determining payment to participants under the terms of the APM.

(2) At least one of the quality measures upon which an Advanced APM bases the payment in paragraph (b)(1) of this section must have an evidence-based focus, be reliable and valid, and meet at least one of the following criteria:

- (i) Used in the MIPS quality performance category as described in §414.1330;
- (ii) Endorsed by a consensus-based entity;
- (iii) Developed under section 1848(s) of the Act;
- (iv) Submitted in response to the MIPS Call for Quality Measures under section 1848(q)(2)(D)(ii) of the Act; or
- (v) Any other quality measures that CMS determines to have an evidence-based focus and to be reliable and valid.

(3) In addition to the quality measure requirements under paragraph (b)(2) of this section, the quality measures upon which an Advanced APM bases the payment in paragraph (b)(1) of this section must include at least one outcome measure. This requirement does not apply if CMS determines that there are no available or applicable outcome measures included in the MIPS quality measures list for the Advanced APM's first QP Performance Period.

(c) Financial risk. To be an Advanced APM, an APM must either meet the financial risk standard under paragraphs (d)(1) or (d)(2) of this section and the nominal amount standard under paragraphs (d)(3) or (d)(4) of this section or be an expanded Medical Home Model under section 1115A(c) of the Act.

(1) Generally applicable financial risk standard. Except for paragraph (c)(2) of this section, to be an Advanced APM, an APM must, based on whether an APM Entity's actual expenditures for which the APM Entity is responsible under the APM exceed expected

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

expenditures during a specified QP Performance Period, do one or more of the following:

(i) Withhold payment for services to the APM Entity or the APM Entity's eligible clinicians;

(ii) Reduce payment rates to the APM Entity or the APM Entity's eligible clinicians; or

(iii) Require the APM Entity to owe payment(s) to CMS.

(2) Medical Home Model financial risk standard. The following standard applies only for APM Entities that are participating in Medical Home Models, and, starting in the 2018 QP Performance Period, such APM Entities must be owned and operated by an organization with fewer than 50 eligible clinicians whose Medicare billing rights have been reassigned to the TIN(s) of the organization(s) or any of the organization's subsidiary entities. The APM Entity participates in a Medical Home Model that, based on the APM Entity's failure to meet or exceed one or more specified performance standards, which may include expected expenditures, does one or more of the following:

(i) Withholds payment for services to the APM Entity or the APM Entity's eligible clinicians;

(ii) Reduces payment rates to the APM Entity or the APM Entity's eligible clinicians;

(iii) Requires the APM Entity to owe payment(s) to CMS; or

(iv) Causes the APM Entity to lose the right to all or part of an otherwise guaranteed payment or payments.

(3) Generally applicable nominal amount standard.

(i) Except as provided in paragraph (c)(4) of this section, the total amount an APM Entity potentially owes CMS or foregoes under an APM must be at least equal to either:

(A) For QP Performance Periods 2017 and 2018, 8 percent of the estimated average total Medicare Parts A and B revenues of participating APM Entities; or

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(B) 3 percent of the expected expenditures for which an APM Entity is responsible under the APM.

(ii) [Reserved]

(4) Medical Home Model nominal amount standard.

(i) For a Medical Home Model to be an Advanced APM, the total annual amount that an Advanced APM Entity potentially owes CMS or foregoes must be at least the following amounts:

(A) For QP Performance Period 2017, 2.5 percent of the estimated average total Medicare Parts A and B revenues of participating APM Entities.

(B) For QP Performance Period 2018, 3 percent of the estimated average total Medicare Parts A and B revenues of participating APM Entities;

(C) For QP Performance Period 2019, 4 percent of the estimated average total Medicare Parts A and B revenues of participating APM Entities.

(D) For QP Performance Period 2020 and later, 5 percent of the estimated average total Medicare Parts A and B revenues of participating APM Entities.

(5) Expected expenditures. For the purposes of this section, expected expenditures is defined as the beneficiary expenditures for which an APM Entity is responsible under an APM. For episode payment models, expected expenditures mean the episode target price.

(6) Capitation. A full capitation arrangement meets this Advanced APM criterion. For purposes of this part, a capitation arrangement means a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services for which payment is made through the APM furnished to a population of beneficiaries, and no settlement is performed to reconcile or share losses incurred or savings earned by the APM Entity. Arrangements between CMS and Medicare Advantage Organizations under the Medicare

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Advantage program (42 U.S.C. 422) are not considered capitation arrangements for purposes of this paragraph.

**§414.1420 Other payer advanced APMs.**

(a) Other Payer Advanced APM criteria. A payment arrangement with a payer other than Medicare is an Other Payer Advanced APM for a QP Performance Period if CMS determines that the arrangement meets the following criteria during the QP Performance Period:

(1) Use of CEHRT, as described in paragraph (b) of this section;

(2) Quality measures comparable to measures under the MIPS quality performance category apply, as described in paragraph (c) of this section; and

(3) Either:

(i) Requires APM Entities to bears more than nominal financial risk if actual aggregate expenditures exceed expected aggregate expenditures, as described in paragraph (d) of this section; or

(ii) Is a Medicaid Medical Home Model that meets criteria comparable to Medical Home Models expanded under section 1115A(c) of the Act, as described in paragraph (d)(3) of this section.

(b) Use of CEHRT. To be an Other Payer Advanced APM, an other payer arrangement must require participants to use CEHRT as defined in §414.1305. The other payer arrangement must require at least 50 percent of eligible clinicians in each participating APM Entity group, or each hospital if hospitals are the APM Entities, to use CEHRT to document and communicate clinical care.

(c) Quality measure use.

(1) To be an Other Payer Advanced APM, a payment arrangement must apply quality measures comparable to measures under the MIPS quality performance category, as described in

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

paragraph (c)(2) of this section.

(2) At least one of the quality measures used in the payment arrangement with an APM Entity must have an evidence-based focus, be reliable and valid, and meet at least one of the following criteria:

- (i) Used in the MIPS quality performance category, as described in §414.1330;
- (ii) Endorsed by a consensus-based entity;
- (iii) Developed under section 1848(s) of the Act;
- (iv) Submitted in response to the MIPS Call for Quality Measures under section 1848(q)(2)(D)(ii) of the Act; or
- (v) Any other quality measures that CMS determines to have an evidence-based focus and to be reliable and valid.

(3) To meet the quality measure use criterion, an other payment arrangement must use an outcome measure if there is an applicable outcome measure on the MIPS quality measure list. If an Other Payer Advanced APM has no outcome measure, the Advanced APM Entity must attest that there is no applicable outcome measure on the MIPS list.

(d) Other Payer Advanced APM financial risk. To be an Other Payer Advanced APM, an other payer arrangement must meet either the financial risk standard under paragraphs (d)(1) or (d)(2) of this section and the nominal risk standard under paragraphs (d)(3) or (d)(4) of this section, make payment using a full capitation arrangement under paragraph (d)(6) of this section, or be a Medicaid Medical Home Model that meets criteria comparable to an expanded Medical Home Model under section 1115A(c) of the Act.

(1) Other Payer Advanced APM financial risk standard. Except for APM Entities to which paragraph (d)(2) of this section applies, to be an Other Payer Advanced APM, an APM Entity must, based on whether an APM Entity's actual expenditures for which the APM Entity is

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

responsible under the APM exceed expected expenditures during a specified performance period

do one or more of the following:

(i) Withhold payment for services to the APM Entity or the APM Entity's eligible clinicians;

(ii) Reduce payment rates to the APM Entity or the APM Entity's eligible clinicians; or

(iii) Require direct payment by the APM Entity to the payer.

(2) Medicaid Medical Home Model financial risk standard. For an APM Entity owned and operated by an organization with fewer than 50 eligible clinicians whose Medicare billing rights have been reassigned to the TIN(s) of the organization(s) or any of the organization's subsidiary entities, the following standard applies. The APM Entity participates in a Medicaid Medical Home Model that, based on the APM Entity's failure to meet or exceed one or more specified performance standards, does one or more of the following:

(i) Withhold payment for services to the APM Entity or the APM Entity's eligible clinicians;

(ii) Require direct payment by the APM Entity to the Medicaid program;

(iii) Reduce payment rates to the APM Entity or the APM Entity's eligible clinicians, or

(iv) Require the APM Entity to lose the right to all or part of an otherwise guaranteed payment or payments.

(3) Other Payer Advanced APM nominal amount standard.

(i) Except for risk arrangements described under paragraph (d)(2) of this section, the total amount an APM Entity potentially owes us or foregoes under an Other Payer Advanced APM is at least be equal to 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement.

(ii) Except for risk arrangements described under paragraph (d)(2) of this section, the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

risk arrangement must have:

(A) A marginal risk rate of at least 30 percent; and

(B) Total potential risk of at least 4 percent of expected expenditures.

(4) Medicaid Medical Home Model nominal amount standard. For an APM Entity owned and operated by an organization with fewer than 50 eligible clinicians whose Medicare billing rights have been reassigned to the TIN(s) of the organization(s) or any of the organization's subsidiary entities, the following standard applies. For a Medicaid Medical Home Model to be an Other Payer Advanced APM, the total annual amount that an Advanced APM Entity potentially owes CMS or foregoes must be at least the following amounts:

(i) For QP Performance Period 2019, 4 percent of the estimated average total revenue of participating APM Entities from the payer.

(ii) For QP Performance Period 2020 and later, 5 percent of the estimated average total revenue of participating APM Entities for the payer.

(5) Marginal risk rate. For purposes of this section, the marginal risk rate is defined as the percentage of actual expenditures that exceed expected expenditures for which an APM Entity is responsible under an APM.

(i) In the event that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, the lowest marginal risk rate across all possible levels of actual expenditures would be used for comparison to the marginal risk rate specified in paragraph (d)(3)(ii)(A) of this section, with exceptions for large losses as described in paragraph (d)(5)(ii) of this section and small losses as described in paragraph (d)(5)(iii) of this section.

(ii) Allowance for large losses. The determination in paragraph (d)(3)(ii)(A) of this section may disregard the marginal risk rates that apply in cases when actual expenditures exceed

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

expected expenditures by an amount sufficient to require the APM Entity to make financial risk payments under the Other Payer Advanced APM greater than or equal to the total risk requirement under paragraph (d)(3)(i) of this section.

(iii) Allowance for minimum loss rate. The determination in paragraph (d)(3)(ii)(A) of this section may disregard the marginal risk rates that apply in cases when actual expenditures exceed expected expenditures by less than 4 percent of expected expenditures.

(6) Expected expenditures. For the purposes of this section, expected expenditures is defined as the Other Payer Advanced APM benchmark, except for episode payment models, for which it is defined as the episode target price.

(7) Capitation. A capitation arrangement meets this Other Payer Advanced APM criterion. For purposes of paragraph (d)(3) of this section, a capitation arrangement means a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services for which payment is made through the APM furnished to a population of beneficiaries, and no settlement is performed for the purpose of reconciling or sharing losses incurred or savings earned by the APM Entity. Arrangements made directly between CMS and Medicare Advantage Organizations under the Medicare Advantage program (42 U.S.C. 422) are not considered capitation arrangements for purposes of this paragraph.

**§414.1425 Qualifying APM participant determination: In general.**

(a) List used for QP determination. (1) For Advanced APMs with Advanced APM Entities that include eligible clinicians on a Participation List, the Participation List defines the APM Entity group, regardless of whether the Advanced APM Entity also has eligible clinicians on an Affiliated Practitioner List.

(2) For Advanced APMs with Advanced APM Entities that do not include eligible clinicians on a Participation List but do include eligible clinicians on an Affiliated Practitioner

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

List, the Affiliated Practitioner List defines the eligible clinicians who will be assessed to become QPs.

(3) For Advanced APMs with some Advanced APM Entities that include eligible clinicians on a Participation List and other Advanced APM Entities that only include eligible clinicians on an Affiliated Practitioner List, paragraph (a)(1) applies to APM Entities that include eligible clinicians on a Participation List, and paragraph (a)(2) applies to APM Entities that only include eligible clinicians on an Affiliated Practitioner List.

(b) Group or individual determination.

(1) APM Entity group determination. Except for §414.1445 and paragraph (b)(2) of this section, for purposes of the QP determinations for a year, eligible clinicians are grouped and assessed through their collective participation in an APM Entity group that is in an Advanced APM. To be included in the APM Entity group for purposes of the QP determination, an eligible clinician's APM participant identifier must be present on a Participation List of an APM Entity group on one of the dates: March 31, June 30, or August 31 of the QP Performance Period. An eligible clinician included on a Participation List on any one of these dates is included the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior or later listed dates. CMS performs QP determinations for the eligible clinicians in APM Entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination dates: March 31, June 30, and August 31. An eligible clinician can only be determined to be a QP if the eligible clinician appears on the Participation List on a date (March 31, June 30, or August 31) CMS uses to determine the APM Entity group and to make QP determinations collectively for the APM Entity group based on participation in the Advanced APM.

(2) Affiliated practitioner individual determination. When the Affiliated Practitioner List

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

defines the eligible clinicians to be assessed, for purposes of the QP determinations for a year, those eligible clinicians are assessed individually. To be assessed as an Affiliated Practitioner, an eligible clinician must be identified on an Affiliated Practitioner List on one of the dates: March 31, June 30, or August 31 of the QP Performance Period. An eligible clinician included on an Affiliated Practitioner List on any one of these dates is assessed as an Affiliated Practitioner even if that eligible clinician is not included on that Affiliated Practitioner List at one of the prior or later listed dates. For such eligible clinicians, CMS performs QP determinations during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination dates that the eligible clinician is on the Affiliated Practitioner List: March 31, June 30, and August 31.

(c) QP determination.

(1) CMS makes QP determinations as set forth in §§414.1435 and 414.1440.

(2) An eligible clinician cannot be both a QP and a Partial QP for a year. A determination that an eligible clinician is a QP means that the eligible clinician is not a Partial QP.

(3) An eligible clinician is a QP for a year if the eligible clinician is in an APM Entity group that achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period, as described in §414.1430(a)(1), (a)(3), (b)(1) and (b)(3).

(4) Notwithstanding paragraph (c)(3) of this section, an eligible clinician is a QP for a year if:

(i) The eligible clinician is included in more than one Advanced APM Entity group and none of the Advanced APM Entity groups in which the eligible clinician is included meets the QP payment amount threshold or the QP patient count threshold, or the eligible clinician is an Affiliated Practitioner; and

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(ii) CMS determines that the eligible clinician individually achieves a Threshold Score that meets or exceeds the QP payment amount threshold or the QP patient count threshold.

(5) Notwithstanding paragraph (c)(3) of this section, an eligible clinician is not a QP for a year if the APM Entity group voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period.

(6) Notwithstanding paragraph (c)(4) of this section, an eligible clinician is not a QP for a year if any of the Advanced APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period.

(d) Partial QP determination.

(1) An eligible clinician is a Partial QP for a year if the APM Entity group collectively achieves a Threshold Score that meets or exceeds the corresponding Partial QP threshold for that year, as described in §414.1430(a)(2), (a)(4), (b)(2), and (b)(4).

(2) Notwithstanding paragraph (d)(1) of this section, an eligible clinician is a Partial QP for a year if:

(i) The eligible clinician is included in more than one APM Entity group and none of the APM Entity groups in which the eligible clinician is included meets the corresponding QP or Partial QP threshold, or the eligible clinician is an Affiliated Practitioner; and

(ii) CMS determines that the eligible clinician individually achieves a Threshold Score that meets or exceeds the corresponding Partial QP Threshold.

(3) Notwithstanding paragraph (d)(1) of this section, an eligible clinician is not a Partial QP for a year if the APM Entity group voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period.

(4) Notwithstanding paragraph (d)(2) of this section, an eligible clinician is not a Partial

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

QP for a year if any of the Advanced APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period.

(e) Notification of QP determination. CMS notifies eligible clinicians determined to be QPs or Partial QPs for a year as soon as practicable following each QP determination date in the QP Performance Period.

(f) Order of threshold options.

(1) For payment years 2019 and 2020, CMS performs QP determinations for an eligible clinicians only under the Medicare Option described in §414.1435.

(2) For payment years 2021 and later, CMS performs QP determinations for eligible clinicians under the Medicare Option, as described in §414.1435 and, except as specified in (d)(2)(i) and (ii) of this section, the All-Payer Combination Option, described in §414.1440.

(i) If CMS determines the eligible clinician to be a QP under the Medicare Option, then CMS does not calculate a Threshold Score for such eligible clinician under the All-Payer Combination Option.

(ii) If the Threshold Score for an eligible clinician under the Medicare Option is less than the amount specified in §414.1430(b)(2)(ii) and (b)(3)(iii), then CMS does not perform a QP determination for such eligible clinician(s) under the All-Payer Combination Option.

**§414.1430 Qualifying APM participant determination: QP and partial QP thresholds.**

(a) Medicare Option.

(1) QP payment amount threshold. The QP payment amount thresholds are the following values for the indicated payment years:

(i) 2019 and 2020: 25 percent.

(ii) 2021 and 2022: 50 percent.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(iii) 2023 and later: 75 percent.

(2) Partial QP payment amount threshold. The Partial QP payment amount thresholds are the following values for the indicated payment years:

(i) 2019 and 2020: 20 percent.

(ii) 2021 and 2022: 40 percent.

(ii) 2023 and later: 50 percent.

(3) QP patient count threshold. The QP patient count thresholds are the following values for the indicated payment years:

(i) 2019 and 2020: 20 percent

(ii) 2021 and 2022: 35 percent

(ii) 2023 and later: 50 percent

(4) Partial QP patient count threshold. The Partial QP patient count thresholds are the following values for the indicated payment years:

(i) 2019 and 2020: 10 percent

(ii) 2021 and 2022: 25 percent

(iii) 2023 and later: 35 percent

(b) All-Payer Combination Option.

(1) QP payment amount threshold.

(i) The QP payment amount thresholds are the following values for the indicated payment years:

(A) 2021 and 2022: 50 percent.

(B) 2023 and later: 75 percent.

(ii) To meet the QP payment amount threshold under this option, the eligible clinician must also meet a 25 percent QP payment amount threshold under the Medicare Option.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(2) Partial QP payment amount threshold.

(i) The Partial QP payment amount thresholds are the following values for the indicated payment years:

(A) 2021 and 2022: 40 percent.

(B) 2023 and later: 50 percent.

(ii) To meet the QP payment amount threshold under this option, the eligible clinician must also meet a 20 percent Partial QP payment amount threshold under the Medicare Option.

(3) QP patient count threshold.

(i) The QP patient count thresholds are the following values for the indicated payment years:

(A) 2021 and 2022: 35 percent.

(B) 2023 and later: 50 percent.

(ii) To meet the QP patient count threshold under this option, the eligible clinician must also meet a 20 percent QP patient count threshold under the Medicare Option.

(4) Partial QP patient count threshold.

(i) The Partial QP patient count thresholds are the following values for the indicated payment years:

(A) 2021 and 2022: 25 percent.

(B) 2023 and later: 35 percent.

(ii) To meet the Partial QP patient count threshold under this option, the eligible clinician group or eligible clinician must also meet a 10 percent QP patient count threshold under the Medicare Option.

**§414.1435 Qualifying APM participant determination: Medicare option.**

(a) Payment amount method. The Threshold Score for an Advanced APM Entity group

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

or eligible clinician is calculated as a percent by dividing the value described under paragraph (a)(1) of this section by the value described under paragraph (a)(2) of this section.

(1) Numerator. The aggregate of payments for Medicare Part B covered professional services furnished by the Advanced APM Entity group to attributed beneficiaries during the QP Performance Period.

(2) Denominator. The aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to all attribution-eligible beneficiaries during the QP Performance Period.

(3) Claims and adjustments. In the calculations under paragraphs (1) and (2), CMS compiles claims and treats claims adjustments, supplemental service payments, and alternative payment methods in the same manner as described in §414.1450.

(b) Patient count method. The Threshold Score for each eligible clinician in an APM Entity group is calculated as a percent under the patient count method by dividing the value described under paragraph (b)(1) of this section by the value described under paragraph (b)(2) of this section.

(1) Numerator. The number of attributed beneficiaries to whom the Advanced APM Entity group furnishes Medicare Part B covered professional services or services by a Rural Health Clinic (RHC) or Federally-Qualified Health Center (FQHC) during the QP Performance Period.

(2) Denominator. The number of attribution-eligible beneficiaries to whom the APM Entity group or eligible clinician furnish Medicare Part B covered professional services or services by a Rural Health Clinic (RHC) or Federally-Qualified Health Center (FQHC) during the QP Performance Period.

(3) Unique beneficiaries. For each Advanced APM Entity group, a unique Medicare

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

beneficiary is counted no more than one time for the numerator and no more than one time for the denominator.

(4) Beneficiaries count multiple times. Based on attribution under the terms of an Advanced APM, a single Medicare beneficiary may be counted in the numerator or denominator for multiple different Advanced APM Entity groups.

(c) Attribution.

(1) Attributed beneficiaries are determined from Advanced APM attributed beneficiary lists generated by each Advanced APM's specific attribution methodology.

(2) When operationally feasible, this attributed beneficiary list will be the final beneficiary list used for reconciliation purposes in the Advanced APM.

(3) When it is not operationally feasible to use the final attributed beneficiary list, the attributed beneficiary list will be taken from the Advanced APM's most recently available attributed beneficiary list at the end of the QP Performance Period.

(d) Use of methods. CMS calculates Threshold Scores for an Advanced APM Entity under both the payment amount and patient count methods for each QP Performance Period. CMS then assigns the score to the eligible clinicians included in the Advanced APM Entity that results in the greater QP status. QP status is greater than a Partial QP status, which is greater than no QP status.

**§414.1440 Qualifying APM participant determination: All-payer combination option.**

(a) Payments excluded from calculations.

(1) These calculations include a combination of both Medicare payments for Part B covered professional services and all other payments for all other payers, except for payments made by:

(i) The Secretary of Defense for the costs of Department of Defense health care

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

programs;

(ii) The Secretary of Veterans Affairs for the cost of Department of Veterans Affairs

health care programs; and

(iii) Under Title XIX in a State in which no Medicaid Medical Home Model or APM is available.

(2) Title XIX payments will only be included in the numerator and denominator as specified in paragraphs (b)(2) and (3) of this section for an Advanced APM Entity if:

(i) A State has at least one Medicaid Medical Home Model or Medicaid APM in operation that is determined to be an Other Payer Advanced APM; and

(ii) The Advanced APM Entity is eligible to participate in at least one of such Other Payer Advanced APMs during the QP Performance Period, regardless of whether the Advanced APM Entity actually participates in such Other Payer Advanced APMs. This will apply to both the payment amount and patient count methods.

(b) Payment amount method.

(1) In general. The Threshold Score for an Advanced APM Entity group or eligible clinician will be calculated by dividing the value described under the numerator by the value described under the denominator as specified in paragraphs (b)(2) and (3) of this section.

(2) Numerator. The aggregate amount of all payments from all payers, except those excluded under paragraph (a) of this section, to the Advanced APM Entity group or eligible clinician under the terms of Other Payer Advanced APMs during the QP Performance Period. CMS calculates Medicare Part B covered professional services under the All-Payer Combination Option in the same manner as it is calculated under the Medicare Option.

(3) Denominator. The aggregate amount of all payments from all payers, except those excluded under §414.1440(a), to the Advanced APM Entity group during the QP Performance

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Period. The portion of this amount that relates to Medicare Part B covered professional services is calculated under the All-Payer Combination Option in the same manner as it is calculated under the Medicare Option.

(c) Patient count method.

(1) In general. The Threshold Score for an Advanced APM Entity group or eligible clinician is calculated by dividing the value described under the numerator by the value described under the denominator as specified in paragraphs (c)(2) and (c)(3) of this section).

(2) Numerator. The number of unique patients to whom the Advanced APM Entity group or eligible clinician furnishes services that are included in the measures of aggregate expenditures used under the terms of all of their Other Payer Advanced APMs during the QP Performance Period, plus the patient count numerator specified in paragraph (a)(1) of this section.

(3) Denominator. The number of unique patients to whom eligible clinicians in the Advanced APM Entity group furnish services under all non-excluded payers during the QP Performance Period.

(d) Participation in multiple Other Payer Advanced APMs.

(1) For each APM Entity group or eligible clinician, a unique patient is counted no more than one time for the numerator and no more than one time for the denominator for each payer.

(2) CMS may count a single patient in the numerator and/or denominator for multiple different Advanced APM Entities or eligible clinicians.

(3) For purposes of this section, Advanced APM Entities are considered the same entity across Other Payer Advanced APMs if CMS determines that the Participation Lists are substantially similar or if one entity is a subset of the other.

**§414.1445 Identification of other payer advanced APMs.**

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(a) Identification of Medicaid APMs. CMS will make an annual determination prior to the QP Performance Period to identify Medicaid Medical Home Models and Medicaid APMs.

(b) Data used to calculate the Threshold Score under the All-Payer Combination Option.

To be assessed under the All-Payer Combination Option, APM Entities or eligible clinicians must submit the following information for each other payment arrangement in a manner and by a date specified by CMS:

(1) Payment arrangement information necessary to assess the other payer arrangement on all Other Payer Advanced APM criteria under §414.1420;

(2) For each other payment arrangement, the amount of revenues for services furnished through the arrangement, the total revenues from the payer, the numbers of patients furnished any service through the arrangement, and the total numbers of patients furnished any service through the payer.

(3) An attestation from the payer that the submitted information is accurate.

(c) Requirement to submit adequate information.

(1) CMS makes a QP determination with respect to the individual eligible clinician under the All-Payer Combination Option if:

(i) The eligible clinician's Advanced APM Entity submits the information required under this section for CMS to assess the APM Entity group under the All-Payer Combination Option;

or

(ii) The eligible clinician submits adequate information under this section.

(2) If neither the Advanced APM Entity nor the eligible clinician submits all of the information required under this section, then CMS does not make a QP assessment for such eligible clinician under the All-Payer Combination Option.

(d) Outcome measure. An Other Payer Advanced APM must base payment on at least

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

one outcome measure.

(1) Exception. If an Other Payer Advanced APM has no outcome measure, the Advanced APM Entity must submit an attestation in a manner and by a date determined by CMS that there is no available or applicable outcome measure on the MIPS list of quality measures.

(2) [Reserved]

#### **§414.1450 APM incentive payment.**

(a) In general.

(1) CMS makes a lump sum payment to QPs in the amount described in paragraph (b) of this section in the manner described in paragraphs (d) and (e) of this section.

(2) CMS provides notice of the amount of the APM Incentive Payment to QPs as soon as practicable following the calculation and validation of the APM Incentive Payment amount, but in any event no later than 1 year after the incentive payment base period.

(b) APM Incentive Payment amount.

(1) The amount of the APM Incentive Payment is equal to 5 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year.

(2) The estimated aggregate payment amount for covered professional services includes all such payments to any and all of the TIN/NPI combinations associated with the NPI of the QP.

(3) In calculating the estimated aggregate payment amount for a QP, CMS uses claims submitted with dates of service from January 1 through December 31 of the incentive payment base period, and processing dates of January 1 of the base period through March 31 of the subsequent payment year.

(4) The payment adjustment amounts, negative or positive, as described in sections 1848(m), (o), (p), and (q) of the Act are not included in calculating the APM Incentive Payment

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

amount.

(5) Incentive payments made to eligible clinicians under sections 1833 (m), (x), and (y) of the Act are not included in calculating the APM Incentive Payment amount.

(6) Financial risk payments such as shared savings payments or net reconciliation payments are excluded from the amount of covered professional services in calculating the APM Incentive Payment amount.

(7) Supplemental service payments in the amount of covered professional services are included in calculating the APM Incentive Payment amount according to this paragraph (b). Supplemental service payments are included in the amount of covered professional services when calculating the APM Incentive Payment amount when the supplemental service payment meets the following four criteria:

(i) Is payment for services that constitute physicians services authorized under section 1832(a) and defined under section 1861(s) of the Act.

(ii) Is made for only Part B services under the criterion in paragraph (b)(9)(i) of this section.

(iii) Is directly attributable to services furnished to an individual beneficiary.

(iv) Is directly attributable to an eligible clinician, including an eligible clinician that is a group of individual eligible clinicians.

(8) For payment amounts that are affected by a cash flow mechanism, the payment amounts that would have occurred if the cash flow mechanism were not in place are used in calculating the APM Incentive Payment amount.

(c) APM Incentive Payment recipient.

(1) CMS pays the entire APM Incentive Payment amount to the TIN associated with the QP's participation in the Advanced APM entity that met the applicable QP threshold during the

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

#### QP Performance Period.

(2) In the event that an eligible clinician is no longer affiliated with the TIN associated with the QP's participation in the Advanced APM Entity that met the applicable QP threshold during the QP Performance Period at the time of the APM Incentive Payment distribution, CMS makes the APM Incentive Payment to the TIN listed on the eligible clinician's CMS-588 EFT Application form on the date that the APM Incentive Payment is distributed.

(3) In the event that an eligible clinician becomes a QP through participation in multiple Advanced APMs, CMS divides the APM Incentive Payment amount between the TINs associated with the QP's participation in each Advanced APM during the QP Performance Period. Such payments will be divided in proportion to the amount of payments associated with each TIN that the eligible clinician received for covered professional services during the QP Performance Period.

(d) Timing of the APM Incentive Payment. APM Incentive Payments made under this section are made as soon as practicable following the calculation and validation of the APM Incentive Payment amount, but in any event no later than 1 year after the incentive payment base period.

(e) Treatment of APM Incentive Payment amount in APMs.

(1) APM Incentive Payments made under this section are not included in determining actual expenditures under an APM.

(2) APM Incentive Payments made under this section are not included in calculations for the purposes of rebasing benchmarks in an APM.

(f) Treatment of APM Incentive Payment for other Medicare incentive payments and payment adjustments. APM Incentive Payments made under this section will not be included in determining the amount of incentive payment made to eligible clinicians under section 1833 (m),

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(x), and (y) of the Act.

#### **§414.1455 Limitation on review.**

There is no administrative or judicial review under sections 1869, 1878, or otherwise, of the Act of the following:

(a) The determination that an eligible clinician is a QP or Partial QP under §414.1425 and the determination that an APM Entity is an Advanced APM Entity under §414.1410.

(b) The determination of the amount of the APM Incentive Payment under §414.1450, including any estimation as part of such determination.

#### **§414.1460 Monitoring and program integrity.**

(a) Vetting eligible clinicians prior to payment of the APM Incentive Payment. Prior to payment of the APM Incentive Payment, CMS determines if eligible clinicians were in compliance with all Medicare conditions of participation and the terms of the relevant Advanced APMs in which they participate during the QP Performance Period. For QPs not meeting these standards there may be a reduction or denial of the APM Incentive Payment. A determination under this provision is not binding for other purposes.

(b) Termination by Advanced APMs. CMS may reduce or deny an APM Incentive Payment to eligible clinicians who are terminated by APMs or whose Advanced APM Entities are terminated by APMs for non-compliance with all Medicare conditions of participation or the terms of the relevant Advanced APMS in which they participate during the QP Performance Periods.

(c) Information submitted for All-Payer Combination Option. Information submitted by eligible clinicians or Advanced APM Entities to meet the requirements of the All-Payer Combination Option may be subject to audit by CMS. Eligible clinicians and Advanced APM Entities must maintain copies of any supporting documentation related to All-Payer Combination

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

Option for at least 10 years and must attest to the accuracy and completeness of the data submitted.

(d) Recoupment of APM Incentive Payment. For any QPs who are terminated from an Advanced APM or found to be in violation of any Federal, State, or tribal statute, regulation, or other binding guidance during the QP Performance Period or Incentive Payment Base Period or terminated after these periods as a result of a violation occurring during either period, CMS may rescind such eligible clinicians' QP determinations and, if necessary, recoup part or all of any such eligible clinicians' APM Incentive Payment or deduct such amount from future payments to such individuals. CMS may reopen and recoup any payments that were made in error in accordance with procedures similar to those set forth at 42 CFR 405.980 and 42 CFR 405.370 through 405.379 or established under the relevant APM. The APM Incentive Payment will be recouped if an audit reveals a lack of support for attested statements provided by eligible clinicians and Advanced APM Entities.

(e) Maintenance of records. An Advanced APM Entity or eligible clinician that submits information to CMS under §414.1445 for assessment under the All-Payer Combination Option must maintain such books contracts, records, documents, and other evidence for a period of 10 years from the final date of the QP Performance Period or from the date of completion of any audit, evaluation, or inspection, whichever is later, unless:

(1) CMS determines there is a special need to retain a particular record or group of records for a longer period and notifies the Advanced APM Entity of eligible clinician at least 30 days before the formal disposition date; or

(2) There has been a termination, dispute, or allegation of fraud or similar fault against the Advanced APM Entity or eligible clinician, in which case the Advanced APM Entity or eligible clinician must retain records for an additional 6 years from the date of any resulting final

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

resolution of the termination, dispute, or allegation of fraud or similar fault.

(f) OIG authority. None of the provisions of this part limit or restrict OIG's authority to audit, evaluate, investigate, or inspect the Advanced APM Entity, its eligible clinicians, and other individuals or entities performing functions or services related to its APM activities.

#### **§414.1465 Physician-focused payment models.**

(a) Definition. A physician-focused payment model (PFPM) is an Alternative Payment Model: (1) In which Medicare is a payer;

(2) In which eligible clinicians that are eligible professionals as defined in section 1848(k)(3)(B) of the Act are participants and play a core role in implementing the APM's payment methodology, and

(3) Which targets the quality and costs of services that eligible professionals participating in the Alternative Payment Model provide, order, or can significantly influence.

(b) Criteria. In carrying out its review of physician-focused payment model proposals, the PTAC must assess whether the physician-focused payment model meets the following criteria for PFPMs sought by the Secretary. The Secretary seeks PFPMs that:

(1) Incentives: Pay for higher-value care.

(i) Value over volume: provide incentives to practitioners to deliver high-quality health care.

(ii) Flexibility: provide the flexibility needed for practitioners to deliver high-quality health care.

(iii) Quality and Cost: are anticipated to improve health care quality at no additional cost, maintain health care quality while decreasing cost, or both improve health care quality and decrease cost.

(iv) Payment methodology: pay APM Entities with a payment methodology designed to

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

achieve the goals of the PFPM Criteria. Addresses in detail through this methodology how Medicare, and other payers if applicable, pay APM Entities, how the payment methodology differs from current payment methodologies, and why the PFPM cannot be tested under current payment methodologies.

(v) Scope: aim to broaden or expand the CMS APM portfolio by addressing an issue in payment policy in a new way or including APM Entities whose opportunities to participate in APMs have been limited.

(vi) Ability to be evaluated: have evaluable goals for quality of care, cost, and any other goals of the PFPM.

(2) Care delivery improvements: Promote better care coordination, protect patient safety, and encourage patient engagement.

(i) Integration and Care Coordination: encourage greater integration and care coordination among practitioners and across settings where multiple practitioners or settings are relevant to delivering care to the population treated under the PFPM.

(ii) Patient Choice: encourage greater attention to the health of the population served while also supporting the unique needs and preferences of individual patients.

(iii) Patient Safety: aim to maintain or improve standards of patient safety.

(3) Information Enhancements: Improving the availability of information to guide decision-making.

(i) Health Information Technology: encourage use of health information technology to inform care.

(ii) [Reserved]

**PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD  
TECHNOLOGY INCENTIVE PROGRAM**

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

4. The authority citation for part 495 continues to read as follows:

**Authority:** Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

5. Section 495.4 is amended by revising the definition of “Meaningful EHR user” to read as follows:

**§495.4 Definitions.**

\* \* \* \* \*

Meaningful EHR user means --

(1) Subject to paragraph (3) of this definition, an EP, eligible hospital or CAH that, for an EHR reporting period for a payment year or payment adjustment year, demonstrates in accordance with §495.40 meaningful use of certified EHR technology by meeting the applicable objectives and associated measures under §§495.20, 495.22, and 495.24, supporting information exchange and the prevention of health information blocking and engaging in activities related to supporting providers with the performance of CEHRT, and successfully reporting the clinical quality measures selected by CMS to CMS or the States, as applicable, in the form and manner specified by CMS or the States, as applicable; and

(2)(i) Except as specified in paragraph (2)(ii) of this definition, a Medicaid EP or Medicaid eligible hospital, that meets the requirements of paragraph (1) of this definition and any additional criteria for meaningful use imposed by the State and approved by CMS under §§495.316 and 495.332.

(ii) An eligible hospital or CAH is deemed to be a meaningful EHR user for purposes of receiving an incentive payment under subpart D of this part, if the hospital participates in both the Medicare and Medicaid EHR incentive programs, and the hospital meets the requirements of paragraph (1) of this definition.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(3) To be considered a meaningful EHR user, at least 50 percent of an EP's patient encounters during an EHR reporting period for a payment year (or, in the case of a payment adjustment year, during an applicable EHR reporting period for such payment adjustment year) must occur at a practice/location or practices/locations equipped with certified EHR technology.

\* \* \* \* \*

6. Section 495.40 is amended by—

- a. Revising paragraph (a) introductory text;
- b. Revising paragraphs (a)(2)(i)(E) and (F);
- c. Adding paragraphs (a)(2)(i)(G), (H) and (I);
- d. Revising paragraph (b) introductory text; and
- e. Adding paragraphs (b)(2)(i)(H) and (I).

The revision and additions read as follows:

**§495.40 Demonstration of meaningful use criteria.**

(a) Demonstration by EPs. An EP must demonstrate that he or she satisfies each of the applicable objectives and associated measures under §495.20 or §495.24, supports information exchange and the prevention of health information blocking, and engages in activities related to supporting providers with the performance of CEHRT:

\* \* \* \* \*

(2) \* \* \*

(i) \* \* \*

(E) For CY 2015 and 2016, satisfied the required objectives and associated measures under §495.22(e) for meaningful use.

(F) For CY 2017, the EP may satisfy either the objectives and measures specified in §495.22(e), or the objectives and measures specified in §495.24(d).

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

(G) For CY 2018 and subsequent years, satisfied the required objectives and associated measures under §495.24(d) for meaningful use.

(H) Supporting providers with the performance of CEHRT (SPPC). To engage in activities related to supporting providers with the performance of CEHRT, the EP—

(1) Must attest that he or she:

(i) Acknowledges the requirement to cooperate in good faith with ONC direct review of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC direct review is received; and

(ii) If requested, cooperated in good faith with ONC direct review of his or her health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meets (or can be used to meet) the definition of CEHRT, including by permitting timely access to such technology and demonstrating its capabilities as implemented and used by the EP in the field.

(2) Optionally, may also attest that he or she:

(i) Acknowledges the option to cooperate in good faith with ONC-ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC-ACB surveillance is received; and

(ii) If requested, cooperated in good faith with ONC-ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meets (or can be used to meet) the definition of CEHRT, including by permitting timely access to such technology and demonstrating capabilities as implemented and used by the EP in the field.

(I) Support for health information exchange and the prevention of information blocking. For an EHR reporting period in CY 2017 and subsequent years, the EP must attest that he or

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

she—

(1) Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.

(2) Implemented technologies, standards, policies, practices, and agreements reasonably calculated to ensure, to the greatest extent practicable and permitted by law, that the certified EHR technology was, at all relevant times—

(i) Connected in accordance with applicable law;

(ii) Compliant with all standards applicable to the exchange of information, including the standards, implementation specifications, and certification criteria adopted at 45 CFR part 170;

(iii) Implemented in a manner that allowed for timely access by patients to their electronic health information; and

(iv) Implemented in a manner that allowed for the timely, secure, and trusted bi-directional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj(3)), including unaffiliated providers, and with disparate certified EHR technology and vendors.

(3) Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj(3)), and other persons, regardless of the requestor's affiliation or technology vendor.

\* \* \* \* \*

(b) Demonstration by Eligible Hospitals and CAHs. An eligible hospital or CAH must demonstrate that it satisfies each of the applicable objectives and associated measures under §495.20 or §495.24, supports information exchange and the prevention of health information blocking, and engages in activities related to supporting providers with the performance of

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. \* \* \* \* \*

7. Section 495.102 is amended by revising paragraph (d)(1), (2)(iv) and (3) to read as follows:

**§495.102 Incentive payments to EPs.**

\* \* \* \* \*

(d) \*\*\*

(1) Subject to paragraphs (d)(3) and (4) of this section, for CY 2015 through the end of CY 2018, for covered professional services furnished by an EP who is not hospital-based, and who is not a qualifying EP by virtue of not being a meaningful EHR user (for the EHR reporting period applicable to the payment adjustment year), the payment amount for such services is equal to the product of the applicable percent specified in paragraph (d)(2) of this section and the Medicare physician fee schedule amount for such services.

(2) \* \* \*

(iv) For 2018, 97 percent, except as provided in paragraph (d)(3) of this section.

(3) Decrease in applicable percent in certain circumstances. In CY 2018, if the Secretary finds that the proportion of EPs who are meaningful EHR users is less than 75 percent, the applicable percent must be decreased by 1 percentage point for EPs from the applicable percent in the preceding year.

\* \* \* \* \*

8. Section 495.316 is amended by revising paragraph (g)(2) and adding paragraph (g)(3) to read as follows:

**§495.316 State monitoring and reporting regarding activities required to receive an incentive payment.**

Note: The following Appendix will not appear in the Code of Federal Regulations.

## APPENDIX

**TABLE A: Finalized Individual Quality Measures Available for MIPS Reporting in 2017**  
(Existing Measures Finalized in CMS-1631-FC).

The 2016 PQRS Measures Specifications Supporting Documents can be found at the following link: <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/pqrs/measurescodes.html>.

Note: Existing measures with finalized substantive changes are noted with an asterisk (\*), new finalized measures are noted with a plus symbol (+), core measures as agreed upon by Core Quality Measure Collaborative (CQMC) are noted with the symbol (§), high priority measures are noted with an exclamation point (!), and high priority measures that are appropriate use measures are noted with a double exclamation point (!!), in the column.

[Please note that the proposals contained in Tables D and G of the Appendix of the proposed rule have been incorporated into and are addressed in Table A below.]

Indicator	NQF/ Quality #	CMS E-Measure ID	National Quality Strategy Domain	Data submission Method	Measure Type	Measure Title and Description <sup>y</sup>	Primary Measure Steward
* § !	0059/001	122 V5	Effective Clinical Care	Claims, Web Interface, Registry, EHR	Intermediate Outcome	<p><b>Diabetes: Hemoglobin A1c (HbA1c) Poor Control (&gt;9%):</b> Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c &gt; 9.0% during the measurement period.</p> <p><b>Comments:</b> One commenter did not support the inclusion of this measure because they did not believe it would result in better patient care. Commenters also asked that CMS modify the measure.</p> <p><b>Response:</b> CMS believes this to be a significant measure because it monitors hemoglobin levels and identifies poor control. CMS believes that monitoring of hemoglobin levels will lead to better treatment and outcomes for patients. Additionally, this measure is not owned by CMS and, therefore, cannot be modified without coordinating with the measure owner. CMS will share measure modification requests with the measure owner prior to any modifications being made and, as necessary, propose in future rulemaking.</p> <p><b>Final Decision:</b> CMS is finalizing this measure for the CY 2017 performance period and its proposal in Table G of the Appendix of the proposed rule (81 FR 28531) to change the measure description that clarifies the definition of Hemoglobin A1c required for poor control. This change does not constitute a change in measure intent or logic coding. Hemoglobin A1c &gt;9.0% is consistent with clinical guidelines and practice. Additionally, in response to the finalized MIPS policy that no longer includes Measures Group as</p>	National Committee for Quality Assurance

						<p><b>Response:</b> CMS recognizes that this measure may not be ideal for providers whose patients are suffering from this specific condition. However, CMS ascertains that this measure is meant for providers whose patients may have weight or BMI issues associated with being outside of normal weight parameters. CMS relies on the provider to provide the appropriate follow-up for patients, recognizing the various associated issues a patient may or may not face. Because, there are a number of chronic illnesses that are linked to being outside of normal weight parameters and research shows that proper screening and follow-up is an appropriate way to address weight related issues, CMS believes this is a valid measure and should remain in the program.</p> <p><b>Final Decision:</b> CMS is finalizing Q.#128 for 2017 Performance Period. CMS is also finalizing its proposal in Table G of the Appendix of the proposed rule (81 FR 28536) to remove the upper parameter from the measure description to align with the recommendations of technical expert panel and clinical expertise. Additionally, in response to the finalized MIPS policy that no longer includes Measures Group as a data submission mechanism, Measures Group is being removed from this measure as a data submission mechanism.</p>

						Reconciliation Post-Discharge. Since these measures cover similar topic areas, CMS proposes to remove this measure from the Web Interface. Additionally, in response to the finalized MIPS policy that no longer includes Measures Group as a data submission mechanism, Measures Group is being removed from this measure as a data submission mechanism.	
!	0420/131	N/A	Communication and Care Coordination	Claims, Registry	Process	<p><b>Pain Assessment and Follow-Up:</b> Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.</p> <p><b>Comment:</b> One commenter did not support CMS's decision to include this measure in the MIPS quality measure set stating that it was not practical in every area of the country. Another commenter requested that CMS add this measure to the cross-cutting measures list.</p> <p><b>Response:</b> CMS has identified this measure as high priority because it addresses key issues that are valuable for quality healthcare. While we recognize there may be limited access to pain management specialists in certain areas, we fully support the inclusion of this measure in the program as it addresses the overarching need of appropriate referral for pain management. Additionally, CMS will not finalize the cross-cutting measure requirement but appreciates the commenters request to include the measure in the list. CMS may consider this request for future rulemaking</p> <p><b>Final Decision:</b> CMS is finalizing Q #131 for 2017 Performance Period. There will not be a cross-cutting measure requirement, therefore, this measure will not be included on the list of cross-cutting measures for the 2017 performance period.</p>	Centers for Medicare & Medicaid Services
*	0418/134	2v6	Community/Population Health	Claims, Web Interface, Registry, EHR	Process	<p><b>Preventive Care and Screening: Screening for Depression and Follow-Up Plan:</b> Percentage of patients aged 12 years and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.</p> <p><b>Comments:</b> CMS received several comments supporting our decision to include this measure in the MIPS quality measure set. One commenter applauds CMS for taking action on depression screening. Another commenter</p>	Centers for Medicare & Medicaid Services

						<p>comments supporting the inclusion of the measure and requesting that the measure be included in the behavioral and family medicine specialty measure sets.</p> <p><b>Response:</b> We will address all specialty set comments in Table E of the appendix.</p> <p><b>Final Decision:</b> CMS is finalizing Q #370 for the 2017 Performance Period. CMS is finalizing its proposal in Table G of the Appendix of the proposed rule (81 FR 28566) to revise the measure description to provide clarity for reporting. This does not change the intent of the measure but merely provides clarity to ensure consistent reporting for eligible clinicians. Additionally, CMS is finalizing its proposal to change this measure type designation from intermediate outcome measure to outcome measure. This measure was previously finalized in PQRS as an intermediate outcome measure. However, upon further review and analysis, CMS believes the classification of this measure to be an outcome measure in order to match the outcome of depression remission. Finally, we are adding the measure to the behavioral and family medicine specialty measure sets.</p>	
	0712/371	160 v5	Effective Clinical Care	EHR	Process	<p><b>Depression Utilization of the PHQ-9 Tool:</b> Patients age 18 and older with the diagnosis of major depression or dysthymia who have a Patient Health Questionnaire (PHQ-9) tool administered at least once during a 4-month period in which there was a qualifying visit.</p> <p><b>Comment:</b> CMS received a comment requesting the inclusion of this measure in the behavioral specialty measure set. Commenter also recommends this measure be removed because the commenter believes NQF # 0418 and #105 are more relevant metrics for depression.</p> <p><b>Response:</b> CMS disagrees with commenter that this measure is not relevant to depression assessment. PHQ-9 is a valuable tool in depression assessment and should be used as the preferable tool for depression. CMS believes this measure is relevant for the MIPS quality measure set and should not be removed for the 2017 performance period. CMS may consider removal of this measure in future rulemaking. Furthermore, NQF #105 will also be included in the MIPS quality measure set, therefore, CMS recommends providers report the more appropriate measure. We also note that we will address all specialty set comments in Table E of the appendix.</p>	Minnesota Community Measurement

						<p><b>Comments:</b> CMS received comments opposing the inclusion of this measure, specifically due to the measure not being aligned with clinical guidelines.</p> <p><b>Response:</b> This measure has been updated to align with JNC-8 recommendations as practicable. While CMS agrees that the measure does not address all aspects of the new recommendations, we believe the portions of the recommendation addressed are significant in improving healthcare quality. Additionally, the field does not fully agree on how patient preference and risk can be accurately identified and measured. Until then, CMS will implement sections of the recommendation that are feasible.</p> <p><b>Final Decision:</b> CMS is finalizing Q #441 for 2017 performance period. Specifically, CMS is finalizing its proposal in Table D of the Appendix of the proposed rule (81 FR 28450) to implement the All or None (Composite) measure because it provides benefits to both the patient and the practitioner. CMS believes this measure closely reflects the interests and likely desires of the patient which is a high priority of CMS. Secondly, this measure is an outcome measure that represents a systems perspective emphasizing the importance of optimal care through a patient's entire healthcare experience. During the Measures Application Partnership (MAP) review, the MAP conditionally supported this measure for implementation in 2017. However, the MAP would like to see a future measure that includes patient compliance as part of the composite.</p>

						<p>CMS did not receive specific comments regarding this measure.</p> <p><b>Final Decision:</b> CMS is finalizing Q # 450 for the 2017 performance period. CMS will finalize the measure because it aligns with the CQMC measures. Specifically, CMS, as part of the CQMC, is finalizing its proposal in Table D of the Appendix (81 FR 28456) to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address medical oncology and breast cancer. Furthermore, CMS is utilizing its authority to finalize measures that were not reviewed by the MAP.</p>	
+ §	1859/451		Effective Clinical Care	Registry	Process	<p><b>KRAS Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy:</b> Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom KRAS gene mutation testing was performed</p> <p>CMS did not receive specific comments regarding this measure.</p> <p><b>Final Decision:</b> CMS is finalizing Q #451 for the 2017 performance period. CMS will finalize the measure because it aligns with the CQMC measures. Specifically, CMS, as part of the CQMC, is finalizing its proposal in Table D of the Appendix of the proposed rule (81 FR 28456) to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address medical oncology and breast cancer. Furthermore, CMS is utilizing its authority to finalize measures that were not reviewed by the MAP.</p>	American Society of Clinical Oncology

**NOTE: “TABLE C: Individual Quality Cross-Cutting Measures for the MIPS to Be Available to Meet the Reporting Criteria Via Claims, Registry, and EHR Beginning in 2017” has been removed per policy change - See (add reference) for Rationale]**

**TABLE D: Finalized New Measures for MIPS Reporting in 2017**

<b>Title</b>	Basal Cell Carcinoma (BCC)/Squamous Cell Carcinoma: Biopsy Reporting Time - Pathologist
<b>NQF #:/Quality #</b>	N/A/440
<b>Description:</b>	Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC) (including in situ disease) in which the pathologist communicates results to the clinician within 7 days of biopsy date
<b>Measure Steward:</b>	American Academy of Dermatology
<b>Numerator:</b>	Number of final pathology reports diagnosing cutaneous basal cell carcinoma or squamous cell carcinoma (to include in situ disease) sent from the Pathologist/Dermatopathologist to the biopsying clinician for review within 5 business days from the time when the tissue specimen was received by the pathologist
<b>Denominator:</b>	All pathology reports generated by the Pathologist/Dermatopathologist consistent with cutaneous basal cell carcinoma or squamous cell carcinoma (to include in situ disease)
<b>Exclusions:</b>	Pathologists/Dermatopathologists providing a second opinion on a biopsy
<b>Measure Type:</b>	Process
<b>Measure Domain:</b>	Communication and Care Coordination
<b>Data Submission Method:</b>	Claims, Registry
<b>Rationale:</b>	CMS is finalizing its proposal to implement the NMSC measure to address a clinical performance

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

	gap of communication between pathologists and clinicians regarding final biopsy reports. CMS believes this measure is relevant for pathologists which is a specialty that does not have many relevant measures they can report. During the Measures Application Partnership (MAP) review, the MAP supports this measure and encourages further development.
<b>Title</b>	Ischemic Vascular Disease All or None Outcome Measure (Optimal Control)
<b>NQF#/Quality #:</b>	N/A/441
<b>Description:</b>	The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: Most recent blood pressure (BP) measurement is less than 140/90 mm Hg -- And Most recent tobacco status is Tobacco Free -- And Daily Aspirin or Other Antiplatelet Unless Contraindicated -- And Statin Use
<b>Measure Steward:</b>	Wisconsin Collaborative for Healthcare Quality (WCHQ)
<b>Numerator:</b>	Most recent BP is less than 140/90 mm Hg And Most recent tobacco status is Tobacco Free (NOTE: If there is No Documentation of Tobacco Status the patient is not compliant for this measure) And Daily Aspirin or Other Antiplatelet Unless Contraindicated And Statin Use
<b>Denominator:</b>	Patients with CAD or a CAD Risk-Equivalent Condition 18-75 years of age and alive as of the last day of the Measurement Period. A minimum of two CAD or CAD Risk-Equivalent Condition coded office visits OR one Acute Coronary Event (AMI, PCI, CABG) from a hospital visit and must be seen by a PCP / Cardiologist for two office visits in 24 months and one office visit in 12 months
<b>Exclusions:</b>	History of Gastrointestinal Bleed or Intra-cranial Bleed or documentation of active anticoagulant use during the MP for the Aspirin/Other Anticoagulant component (numerator) of the measure. Inpatient Stays, Emergency Room Visits, Urgent Care Visits, and Patient Self-Reported BP's (Home and Health Fair BP results) for the Blood Pressure Control component (numerator) of the composite measure
<b>Measure Type:</b>	Intermediate Outcome
<b>Measure Domain:</b>	Effective Clinical Care
<b>Data Submission Method:</b>	Registry
<b>Rationale:</b>	CMS is finalizing its proposal to implement the All or None (Composite) measure because it provides benefits to both the patient and the practitioner. CMS believes this measure closely reflects the interests and likely desires of the patient which is a high priority of CMS. Secondly, this measure is an outcome measure that represents a systems perspective emphasizing the importance of optimal care through a patient's entire healthcare experience. During the Measures Application Partnership (MAP) review, the MAP conditionally supports this measure for implementation in 2017. However, the MAP would like to see a future measure that includes patient compliance as part of the composite.
<b>Title</b>	Persistent Beta Blocker Treatment After a Heart Attack
<b>NQF#/Quality #:</b>	0071/442
<b>Description:</b>	The percentage of patients 18 years of age and older during the measurement year who were hospitalized and discharged from July 1 of the year prior to the measurement year to June 30 of the measurement year with a diagnosis of acute myocardial infarction (AMI) and who received were prescribed persistent beta-blocker treatment for six months after discharge
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>Numerator:</b>	Patients who had a 180-day course of treatment with beta-blockers post discharge
<b>Denominator:</b>	Patients 18 years of age and older by the end of the measurement year who were discharged alive from an acute inpatient setting with an AMI from 6 months prior to the beginning of the measurement year through the 6 months after the beginning of the measurement year
<b>Exclusions:</b>	Exclude patients who are identified as having an intolerance or allergy to beta-blocker therapy.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

	Look as far back as possible in the patient’s history for evidence of a contraindication to beta-blocker therapy  Exclude from the denominator hospitalizations in which the patient was transferred directly to a non-acute care facility for any diagnosis
<b>Measure Type:</b>	Process
<b>Measure Domain:</b>	Effective Clinical Care
<b>Data Submission Method:</b>	Registry
<b>Rationale:</b>	CMS, as part of the CQMC, is finalizing its proposal to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address cardiovascular care. Furthermore, CMS is utilizing its authority to finalize measures that were not reviewed by the Measures Application Partnership (MAP).
<b>Title</b>	Non-Recommended Cervical Cancer Screening in Adolescent Females
<b>NQF#/Quality #:</b>	N/A/443
<b>Description:</b>	The percentage of adolescent females 16–20 years of age screened unnecessarily for cervical cancer
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>Numerator:</b>	Cervical cytology (Cervical Cytology Value Set) or an HPV test (HPV Tests Value Set) performed during the measurement year
<b>Denominator:</b>	Adolescent females 16-20 years as of December 31 of the measurement year
<b>Exclusions:</b>	A history of cervical cancer (Cervical Cancer Value Set), HIV (HIV Value Set) or immunodeficiency (Disorders of the Immune System Value Set) any time during the member’s history through December 31 of the measurement year
<b>Measure Type:</b>	Process
<b>Measure Domain:</b>	Patient Safety
<b>Data Submission Method:</b>	Registry
<b>Rationale:</b>	CMS, as part of the CQMC, is finalizing its proposal to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address care coordination and patient safety within primary care. Furthermore, CMS is utilizing its authority to finalize measures that were not reviewed by the Measures Application Partnership (MAP).
<b>Title</b>	Medication Management for People with Asthma (MMA)
<b>NQF#/Quality #:</b>	1799/444
<b>Description:</b>	The percentage of patients 5-64 years of age during the measurement year who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>Numerator:</b>	Medication Compliance 50%: The number of patients who achieved a PDC* of at least 50% for their asthma controller medications during the measurement year  Medication Compliance 75%: The number of patients who achieved a PDC* of at least 75% for their asthma controller medications during the measurement year  *PDC is the proportion of days covered by at least one asthma controller medication prescription, divided by the number of days in the treatment period

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

<b>Denominator:</b>	Patients 5–64 years of age during the measurement year who were identified as having persistent asthma
<b>Exclusions:</b>	1) Exclude patients who had any diagnosis of Emphysema (Emphysema Value Set, Other Emphysema Value Set), COPD (COPD Value Set), Chronic Bronchitis (Obstructive Chronic Bronchitis Value Set, Chronic Respiratory Conditions Due To Fumes/Vapors Value Set), Cystic Fibrosis (Cystic Fibrosis Value Set) or Acute Respiratory Failure (Acute Respiratory Failure Value Set) any time during the patient’s history through the end of the measurement year (e.g., December 31)  2) Exclude any patients who have no asthma controller medications (Table ASM-D) dispensed during the measurement year
<b>Measure Type:</b>	Process
<b>Measure Domain:</b>	Efficiency and Cost Reduction
<b>Data Submission Method</b>	Registry
<b>Rationale:</b>	CMS, as part of the CQMC, is finalizing its proposal to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address pulmonary care within primary care. Furthermore, CMS is utilizing its authority to finalize measures that were not reviewed by the Measures Application Partnership (MAP).
<b>Title</b>	Risk-Adjusted Operative Mortality for Coronary Artery Bypass Graft (CABG)
<b>NQF#/Quality #:</b>	0119/445
<b>Description:</b>	Percent of patients aged 18 years and older undergoing isolated CABG who die, including both 1) all deaths occurring during the hospitalization in which the CABG was performed, even if after 30 days, and 2) those deaths occurring after discharge from the hospital, but within 30 days of the procedure
<b>Measure Steward:</b>	The Society of Thoracic Surgeons
<b>Numerator:</b>	Number of patients undergoing isolated CABG who die, including both 1) all deaths occurring during the hospitalization in which the operation was performed, even if after 30 days, and 2) those deaths occurring after discharge from the hospital, but within 30 days of the procedure
<b>Denominator:</b>	All patients undergoing isolated CABG
<b>Exclusions:</b>	N/A
<b>Measure Type:</b>	Outcome
<b>Measure Domain:</b>	Effective Clinical Care
<b>Data Submission Method:</b>	Registry
<b>Rationale:</b>	CMS, as part of the CQMC, is finalizing its proposal to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address chronic cardiovascular condition. Furthermore, CMS is utilizing its authority to finalize propose measures that were not reviewed by the Measures Application Partnership (MAP).
<b>Title</b>	Operative Mortality Stratified by the Five STS-EACTS Mortality Categories
<b>NQF#/Quality #:</b>	0733/446
<b>Description:</b>	Percent of patients undergoing index pediatric and/or congenital heart surgery who die, including both 1) all deaths occurring during the hospitalization in which the procedure was performed, even if after 30 days (including patients transferred to other acute care facilities), and 2) those deaths occurring after discharge from the hospital, but within 30 days of the procedure, stratified by the five STAT Mortality Levels, a multi-institutional validated complexity stratification tool

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

<b>Measure Steward:</b>	The Society of Thoracic Surgeons
<b>Numerator:</b>	Number of patients undergoing index pediatric and/or congenital heart surgery who die, including both 1) all deaths occurring during the hospitalization in which the procedure was performed, even if after 30 days (including patients transferred to other acute care facilities), and 2) those deaths occurring after discharge from the hospital, but within 30 days of the procedure, stratified by the five STAT Mortality Levels, a multi-institutional validated complexity stratification tool
<b>Denominator:</b>	All patients undergoing index pediatric and/or congenital heart surgery
<b>Exclusions:</b>	N/A
<b>Measure Type:</b>	Outcome
<b>Measure Domain:</b>	Patient Safety
<b>Data Submission Method:</b>	Registry
<b>Rationale:</b>	CMS, as part of the CQMC, is finalizing its proposal to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address pediatric heart surgery. Furthermore, CMS is utilizing its authority to finalize measures that were not reviewed by the Measures Application Partnership (MAP).
<b>Title</b>	Chlamydia Screening and Follow-up
<b>NQF#/Quality #:</b>	1395/447
<b>Description:</b>	The percentage of female adolescents 16 years of age who had a chlamydia screening test with proper follow-up during the measurement period
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>Numerator:</b>	Adolescents who had documentation of a chlamydia screening test with proper follow-up by the time they turn 18 years of age
<b>Denominator:</b>	Sexually active female adolescents with a visit who turned 18 years of age during the measurement year
<b>Exclusions:</b>	N/A
<b>Measure Type:</b>	Process
<b>Measure Domain:</b>	Community/Population Health
<b>Data Submission Method:</b>	Registry
<b>Rationale:</b>	CMS, as part of the CQMC, is finalizing its proposal to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address obstetrics and gynecology conditions. Furthermore, CMS is utilizing its authority to finalize measures that were not reviewed by the Measures Application Partnership (MAP).
<b>Title</b>	Appropriate Work Up Prior to Endometrial Ablation
<b>NQF#/Quality #:</b>	0567/448
<b>Description:</b>	Percentage of women, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results documented before undergoing an endometrial ablation
<b>Measure Steward:</b>	Health Benchmarks – IMS Health
<b>Numerator:</b>	Women who received endometrial sampling or hysteroscopy with biopsy during the year prior to the index date (inclusive of the index date)
<b>Denominator:</b>	Continuously enrolled women who had an endometrial ablation procedure during the measurement year
<b>Exclusions:</b>	Women who had an endometrial ablation procedure during the year prior to the index date

<b>Measure Type:</b>	Process
<b>Measure Domain:</b>	Patient Safety
<b>Data Submission Method:</b>	Registry
<b>Rationale:</b>	CMS, as part of the CQMC, is finalizing its proposal to implement this measure to fulfill a set of condition-specific core measures. CMS believes the CQMC fills measure gaps, condition-specific performance gaps and ensures the collaborative agreement between CMS and private health insurers. This measure is finalized as a core measure to specifically address obstetrics and gynecology conditions. Furthermore, CMS is utilizing its authority to finalize measures that were not reviewed by the Measures Application Partnership (MAP).
<b>Title</b>	HER2 Negative or Undocumented Breast Cancer Patients Spared Treatment with HER2-Targeted Therapies
<b>NQF#/Quality #:</b>	1857/449
<b>Description:</b>	Proportion of female patients (aged 18 years and older) with breast cancer who are human epidermal growth factor receptor 2 (HER2)/neu negative who are not administered HER2-targeted therapies
<b>Measure Steward:</b>	American Society of Clinical Oncology
<b>Numerator:</b>	Trastuzumab not administered during the initial course of treatment
<b>Denominator:</b>	Adult women with AJCC stage I (T1c) – III breast cancer that is HER-2 negative or HER-2 undocumented/unknown
<b>Exclusions:</b>	Patient transfer to practice after initiation of chemotherapy
<b>Measure Type:</b>	Process
<b>Measure Domain:</b>	Efficiency and Cost Reduction
<b>Data Submission Method:</b>	Registry

<b>1. Allergy/Immunology</b>							
+ § !	1799/ 444	NA	Registry	Process	Efficiency and Cost Reduction	Medication Management for People with Asthma (MMA):  The percentage of patients 5-64 years of age during the measurement year who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance
<p><b>Comment:</b> We received multiple comments requesting CMS separate Rheumatology into a different specialty measure set as these two specialties are not similar and the measures do not align across.</p> <p><b>Response:</b> Based on the comments and the references within each comment, CMS agrees that these specialties should not share a specialty measure set. Therefore, CMS is finalizing Allergy and Immunology as a separate set from Rheumatology. Additionally, CMS has revised the measure set from the proposed set per the following changes: 1) Addition of previously identified cross-cutting measures that are relevant for the specialty set (#128, #130, #226, #317, #374, #402) and 2) Removal of rheumatoid arthritis measures that are not appropriate for the revised measure set (#176, #177, #178, #179, #337). CMS believes the finalized specialty set reflects the relevant measures appropriate for Allergy and Immunology specialties.</p> <p><b>Final Decision:</b> CMS is finalizing the Allergy/Immunology Specialty measure set as indicated in the table above.</p>

§ !!	N/A/ 439	N/A	Registry	Efficiency	Efficiency and Cost Reduction	Age Appropriate Screening Colonoscopy  The percentage of patients greater than 85 years of age who received a screening colonoscopy from January 1 to December 31	American Gastroenterological Association/ American Society for Gastrointestinal Endoscopy/ American College of Gastroenterology
<p><b>Comment:</b> CMS received several specific comments regarding changes to the Gastroenterology specialty measure set. For instance, several commenters requested that Inflammatory Bowel Disease (IBD) measures (#271, #275) be added to the measure set because they are applicable to gastroenterology specialty. Another commenter recommended removal of #113 as these patients are usually screened by the primary care provider and referred to the specialist after screening.</p> <p><b>Response:</b> In response to the comments, CMS has revised the measure set from the proposed set with the following changes: 1) addition of previously identified cross-cutting measures that are relevant for the specialty set (#047, #128, #130, #226, #317, #374, #402, #431), , 2) removal of #113 per the commenter’s recommendation as we agree with their assessment, and 3) addition of IBD measures per the commenters’ recommendation as they are applicable to the Gastroenterology specialty (#271, #275). CMS believes the finalized specialty set reflects the relevant measures appropriate for the Gastroenterology specialty.</p> <p><b>Final Decision:</b> CMS is finalizing the Gastroenterology specialty measure set as indicated in the table above.</p>

N/A/ 416	N/A	Claims, Registry	Efficiency	Efficiency and Cost Reduction	Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 through 17 Years  Percentage of emergency department visits for patients aged 2 through 17 years who presented within 24 hours of a minor blunt head trauma with a Glasgow Coma Scale (GCS) score of 15 and who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network prediction rules for traumatic brain injury	American College of Emergency Physicians
	2152/ 431	NA	Registry	Process	Community/ Population Health	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling  Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 24 months AND who received brief counseling if identified as an unhealthy alcohol user.	Physician Consortium for Performance Improvement Foundation (PCPI®)
<p><b>Comment:</b> CMS received a comment to remove #254 and #255 from the measure set because the commenter believed reporting the measures would be burdensome for clinicians.</p> <p><b>Response:</b> CMS believes these measures should remain in the specialty measure set because we believe the measure is applicable to some emergency medicine clinicians. We want to keep these measures available, but as discussed in section II.E.5.b of this final rule with comment period, clinicians are not required to report on every measure in this set, only 6 of them. Additionally, CMS has revised the measure set from the proposed set by adding previously identified cross-cutting measures that are relevant for the specialty set (#047, #130, #226, #317, #374, #402, and #431). Finally, CMS also removed measure #414 from the measure set as this measure is not reflective of emergency medicine routine service and the measure does not include ED codes within the denominator. CMS believes the finalized specialty set reflects the relevant measures appropriate for the emergency medicine specialty.</p> <p><b>Final Decision:</b> CMS is finalizing the Emergency specialty measure set as indicated in the table above.</p>

<b>7. General Practice/Family Medicine</b>							
<p><b>Comment:</b> CMS received specific comments to add several individual measures and cross-cutting measures to the measure set because the commenters believed the additional measures were appropriate for providers within the general practice and family medicine specialties. Commenters specifically asked that measures #007, #008, #046, #047, #110, #119, #163, #204, #226, #236, #309, #321, #370, #442, #443 and #444 be added to the measure set.</p> <p><b>Response:</b> Upon further review of the recommendations provided by commenters, CMS has revised the measure set from the proposed set by adding these relevant measures to the measures set (#007, #008, #047, #110, #119, #163, #204, #226, #309, #321, #370, #442, #443, and #444). CMS did not include measure #46 in the General Practice measure set because we are including measure #130, a cross-cutting measure, which is closely related to this measure, to the set. In addition, CMS has added previously identified cross-cutting measures that are relevant for the specialty set (#047, #128, #130, #226, #317, #402, and #431). CMS believes the finalized specialty set reflects the relevant measures appropriate for the family medicine/general practice specialty.</p> <p><b>Final Decision:</b> CMS is finalizing the general practice and family medicine specialty measure set as indicated in the table above.</p>

National Committee for Quality Assurance
<p><b>Comment:</b> CMS received several comments that suggested the pediatrics measure set align with the Children’s Health Insurance Program Reauthorization Act (CHIPRA) Core Measure Set <a href="https://www.medicare.gov/medicaid-chip-program-information/by-topics/quality-of-care/downloads/2016-child-core-set.pdf">https://www.medicare.gov/medicaid-chip-program-information/by-topics/quality-of-care/downloads/2016-child-core-set.pdf</a>.</p> <p><b>Response:</b> CMS agrees that pediatrics specialty set should, where practicable, align with the CHIPRA core measures that already exist in the program. As such, CMS added measures #239, #240, #310, #366, #379, #382, #391, #394, #444. Measures not added to the Pediatric specialty measure set for 2017 may be considered for future rulemaking once these measures have been added to the MIPS Quality measure set. Additionally, CMS added measures previously identified as cross-cutting to the measure set that are relevant for pediatrics (, , #402,). CMS believes the finalized specialty set reflects the relevant measures appropriate for the pediatrics specialty.</p> <p><b>Final Decision:</b> CMS is finalizing the pediatrics specialty measure set as indicated in the table above.</p>

<p><b>Comment:</b> CMS received support for development of the physical medicine measure set. CMS also received a specific request to remove the measure set because the commenter believed the measures are irrelevant and not applicable to physical medicine. The commenter also believed that psychiatrists would need to find a cross-cutting measure to report in addition to the set.</p> <p><b>Response:</b> CMS will continue to work with specialty groups on measures relevant to specialists and would like to reiterate that specialists should work closely with specialty groups to find appropriate measures to report. Additionally, CMS has added previously identified cross-cutting measures that are relevant for the specialty set (#047, #128, #130, #226, #317, #374, #402, and #431). CMS also notes that we will not finalize the cross-cutting measure requirement as detailed in section II.E.5.b of this final rule with comment. CMS believes the finalized specialty set reflects the relevant measures appropriate for the physical medicine specialty.</p> <p><b>Final Decision:</b> CMS is finalizing the physical medicine specialty measure set as indicated in the table above.</p>

<p><b>Comment:</b> CMS received several comments that recommended CMS remove the radiation oncology sub-specialty from the radiology specialty measure set. Commenters cited that the sub-specialty should be in a specialty set of its own or within an oncology specialty set. CMS also received specific comments to remove #360 from the specialty set.</p> <p><b>Response:</b> Under further review, CMS agrees with commenters that the radiation oncology specialty set should be removed from the radiology specialty set and moved to the oncology specialty set. CMS believes that measure #360 is relevant to most radiologists and that if it is not, radiologists have the opportunity to choose other measures to report if #360 is not applicable. Therefore, we will continue to include #360 in measure set. CMS believes the finalized specialty set reflects the relevant measures appropriate for the radiology specialty.</p> <p><b>Final Decision:</b> CMS is finalizing the radiology specialty measure set as indicated in the table above.</p>

N/A/ 358	N/A	Registry	Process	Person and Caregiver-Centered Experience and Outcomes	Patient-Centered Surgical Risk Assessment and Communication  Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon	American College of Surgeons
	NA/ 374	50v5	EHR	Process	Communication and Care Coordination	Closing the Referral Loop: Receipt of Specialist Report  Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	Centers for Medicare & Medicaid Services
	NA/ 402	NA	Registry	Process	Community/Population Health	Tobacco Use and Help with Quitting Among Adolescents  The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user	National Committee for Quality Assurance
CMS did not receive specific comments regarding changes to the measure set.							
<b>Response:</b> CMS has added previously identified cross-cutting measures that are relevant for the specialty set (#047, #128, #130, #226, #236, #317, #374, and #402). CMS believes the finalized specialty set reflects the relevant measures appropriate for the thoracic surgery specialty.							
<b>Final Decision:</b> CMS is finalizing the thoracic surgery specialty measure set as indicated in the table above.

<b>26. Rheumatology</b>							
<p><b>Comment:</b> CMS received multiple comments requesting CMS separate Rheumatology into a different specialty measure set from Allergy/Immunology. Commenters cited that Allergy, Immunology and Rheumatology specialties are not similar and measures for these specialties do not align.</p> <p><b>Response:</b> Based on the comments, CMS agrees that these specialties should not share a specialty measure set. Therefore, CMS is finalizing Rheumatology as a separate specialty measure set. Additionally, CMS added previously identified cross-cutting measures that are relevant for the specialty set (# 047, #128, #130, #226, #317, #374, and #402). CMS believes the finalized specialty set reflects the relevant measures appropriate for Rheumatology specialty.</p> <p><b>Final Decision:</b> CMS is finalizing the rheumatology specialty measure set as indicated in the table above.</p>

**TABLE F: 2016 PQRS Measures Finalized for Removal for MIPS Reporting in 2017**

Indicator	NQF/ Quality #	CMS E-Measure ID	Data Submission Method	National Quality Strategy Domain	Measure Title and Description <sup>†</sup>	Measure Steward
	N/A/ 002	163v4	EHR	Effective Clinical Care	<p>Diabetes: Low Density Lipoprotein (LDL-C) Control (&lt;100 mg/dL)</p> <p>Percentage of patients 18–75 years of age with diabetes whose LDL-C was adequately controlled (&lt; 100 mg/dL) during the measurement period</p> <p>CMS did not receive specific comments regarding this measure.</p> <p><b>Final Decision:</b> This measure no longer reflects evidence. CMS is finalizing its proposal for the removal of this measure because it no longer reflects clinical guidelines and evidence. Clinical guidelines are better represented by PQRS # 438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease.</p>	National Committee for Quality Assurance
!	0271/ 022	N/A	Claims, Registry	Patient Safety	<p>Perioperative Care: Discontinuation of Prophylactic Parenteral Antibiotics (Non-Cardiac Procedures)</p> <p>Percentage of non-cardiac surgical patients aged 18 years and older undergoing procedures with the indications for prophylactic parenteral antibiotics AND who received a prophylactic parenteral antibiotic, who have an order for discontinuation of prophylactic parenteral antibiotics within 24 hours of surgical end time</p> <p><b>Comments:</b> CMS received several comments to include this measure in the 2017 measure set. Commenter believes this measure is still relevant for certain clinicians and support inclusion in the program if it were modified to be an outcome measure.</p> <p><b>Response:</b> CMS is finalizing its proposal to remove this measure. This measure is considered low bar and is part of standard clinical practice. There is no significant performance gap for this measure as indicated by its high performance rate above 95%. Removing this measure will not significantly impact surgeons' ability to report.</p> <p><b>Final Decision:</b> CMS is finalizing its proposal to remove this measure.</p>	American Medical Association- Physician Consortium for Performance Improvement / National Committee for Quality Assurance
	NA/ 041	NA	Claims, Registry	Effective Clinical Care	<p>Osteoporosis: Pharmacologic Therapy for Men and Women Aged 50 Years and Older</p> <p>Percentage of patients aged 50 years and older with a diagnosis of osteoporosis who were prescribed pharmacologic therapy within 12 months</p> <p><b>Comments:</b> CMS received several comments to include this measure in the 2017 measure set. One commenter stated this measure should continue in the program because they do not consider the measure low-bar.</p> <p><b>Response:</b> CMS is finalizing its proposal to remove this measure. The measure steward will no longer support stewardship of this measure. Measures implemented in the quality payment program are required to be updated annually by the measure</p>	National Committee for Quality Assurance/ American Medical Association- Physician Consortium for Performance Improvement

					<p>steward. Since the measure steward has removed its support to update this measure in 2017, CMS is finalizing the removal of the measure.</p> <p><b>Final Decision:</b> CMS is finalizing its proposal to remove this measure.</p>	
	0047/ 053	N/A	Registry, Measures Group	Effective Clinical Care	<p>Asthma: Pharmacologic Therapy for Persistent Asthma - Ambulatory Care Setting</p> <p>Percentage of patients aged 5 years and older with a diagnosis of persistent asthma who were prescribed long-term control medication</p> <p><b>Comments:</b> CMS received several comments to include this measure in the 2017 measure set. Commenters urged CMS not to remove measure because it remained relevant for immunologists.</p> <p><b>Response:</b> CMS is finalizing its proposal for the removal of this measure. This measure is being replaced by NQF 1799: Medication Management for People with Asthma. NQF #1799 is a measure included in a CQMC core measure set. Additionally, this measure has a performance rate of above 97%.</p> <p><b>Final Decision:</b> CMS is finalizing its proposal to remove this measure.</p>	American Academy of Allergy, Asthma, and Immunology/ American Medical Association-Physician Consortium for Performance Improvement / National Committee for Quality Assurance
	0090/ 054	N/A	Claims, Registry	Effective Clinical Care	<p>Emergency Medicine: 12-Lead Electrocardiogram (ECG) Performed for Non-Traumatic Chest Pain</p> <p>Percentage of patients aged 40 years and older with an emergency department discharge diagnosis of non-traumatic chest pain who had a 12-lead electrocardiogram (ECG) performed</p> <p><b>Comments:</b> CMS received several comments to include this measure in the 2017 measure set. Commenters cited that removal of this measure would inhibit the number of claims-based measures emergency medicine physicians can report.</p> <p><b>Response:</b> CMS is finalizing its proposal for the removal of this measure. This measure is considered low bar and is part of standard clinical practice. There is no significant performance gap for this measure as indicated by the high performance rate of 94%. Removal of this measure does not impact the number of adequate measures for Emergency Department Physicians. CMS estimates that emergency medicine physicians can report more than 10 measures that are claims based if this measure is removed.</p>	American Medical Association-Physician Consortium for Performance Improvement / National Committee for Quality Assurance

**TABLE G: Measures Finalized with Substantive Changes for MIPS Reporting in 2017**

<b>Measure Title:</b>	Diabetes: Hemoglobin A1c Poor Control
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0059/001
<b>CMS E-Measure ID:</b>	CMS122v5
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data Submission Method:</b>	Claims, Web Interface, Registry, EHR, Measures Group
<b>Current Measure Description:</b>	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>• Revise Measure Title to read: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (&gt; 9%)</li> <li>• Revise data submission method to remove Measures Group</li> </ul>
<b>Steward:</b>	National Committee for Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to change the measure description that clarifies the definition of Hemoglobin A1c required for poor control. This change does not constitute a change in measure intent or logic coding. Hemoglobin A1c >9.0% is consistent with clinical guidelines and practice. Additionally, in response to the finalized MIPS policy that no longer includes Measures Group, this measure is being removed from Measures Group as a data submission method.
<b>Measure Title:</b>	Coronary Artery Disease (CAD): Antiplatelet Therapy
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0067/006
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data Submission Method:</b>	Registry, Measures Group
<b>Current Measure Description:</b>	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>• Revise Measure Title to read: Chronic Stable Coronary Artery Disease (CAD): Antiplatelet Therapy</li> <li>• Revise data submission method to remove Measures Group</li> </ul>
<b>Steward:</b>	National Committee for Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to change the measure title to align with the NQF endorsed version of this measure and to clarify the intent of the measure. This change does not constitute a change in the measure intent. The measure description remains the same where patients diagnosed with CAD are prescribed an antiplatelet within 12 months. Additionally, in response to the finalized MIPS policy that no longer includes Measures Group, this measure is being removed from Measures Group as a data submission method.
<b>Measure Title:</b>	Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0083/008
<b>CMS E-Measure ID:</b>	CMS144v5
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data Submission Method:</b>	Web Interface, Registry, EHR, Measures Group
<b>Current Measure</b>	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

<b>Description:</b>	current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise data submission method to remove from the Web Interface</li> </ul>
<b>Steward:</b>	American Medical Association-Physician Consortium for Performance Improvement/ American College of Cardiology Foundation/ American Heart Association
<b>Rationale:</b>	CMS is finalizing its proposal to change the reporting mechanism for this measure by removing it from the Web Interface. The Web Interface measure set contains measures for primary care and also includes relevant measures from the PCMH Core Measure Set established by the Core Quality Measure Collaborative (CQMC). This measure is not a measure in the core set and is being finalized for removal from the Web Interface to align the Web Interface measure set with the PCMH Core Measure Set.
<b>Measure Title:</b>	Medication Reconciliation Post-Discharge
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0097/046
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Data Submission Method:</b>	Claims, Registry
<b>Current Measure Description:</b>	<p>The percentage of discharges from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years and older of age seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record</p> <p>This measure is reported as three rates stratified by age group:</p> <ul style="list-style-type: none"> <li>Reporting Criteria 1: 18-64 years of age</li> <li>Reporting Criteria 2: 65 years and older</li> <li>Total Rate: All patients 18 years of age and older</li> </ul>
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise data submission method to add the Web Interface</li> </ul>
<b>Steward:</b>	National Committee for Quality Assurance/ American Medical Association-Physician Consortium for Performance Improvement
<b>Rationale:</b>	CMS is finalizing its proposal to change the data submission method for this measure by adding it to the Web Interface. The Web Interface measure set contains measures for primary care and also includes relevant measures from the PCMH Core Measure Set established by the CQMC. This measure is a core measure and is being finalized for the Web Interface to align the Web Interface measure set with the PCMH Core Measure Set. Furthermore, this measure is replacing PQRS #130: Documentation of Current Medications in the Medical Record in the Web Interface.
<b>Measure Title:</b>	Appropriate Testing for Children with Pharyngitis
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A (previously 0002)/066
<b>CMS E-Measure ID:</b>	CMS146v5
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Data submission Method:</b>	Registry, EHR
<b>Current Measure Description:</b>	Percentage of children 2-18 years of age who were diagnosed with pharyngitis, ordered an antibiotic and received a group A streptococcus (strep) test for the episode
<b>Finalized Substantive</b>	<ul style="list-style-type: none"> <li>Revise Measures description to read: Percentage of children 3-18 years of age who</li> </ul>

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

<b>Change</b>	<p>were diagnosed with pharyngitis, ordered an antibiotic and received a group A streptococcus (strep) test for the episode</p> <ul style="list-style-type: none"> <li>Remove NQF #0002</li> </ul>
<b>Steward:</b>	National Committee on Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to change the measure description due to guideline changes in 2013 where the age range changed to 3-18. Furthermore, this measure is no longer endorsed by the National Quality Forum (NQF), therefore, CMS proposes to remove the NQF number as a reference for this measure.
<b>Measure Title:</b>	Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0389/102
<b>CMS E-Measure ID:</b>	CMS129v6
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Data submission Method:</b>	Registry, EHR
<b>Measure Description:</b>	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy, OR cryotherapy who did not have a bone scan performed at any time since diagnosis of prostate cancer
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise measure description to read: Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy, OR cryotherapy who did not have a bone scan performed at any time since diagnosis of prostate cancer</li> </ul>
<b>Steward:</b>	American Medical Association-Physician Consortium for Performance Improvement
<b>Rationale:</b>	CMS is finalizing its proposal to change the measure description due to a change in clinical guidelines that includes very low and low risk of prostate cancer recurrence. CMS received a comment that supported this change in the measure description. CMS believes that this change does not change the intent of the measure but merely ensures the measure remains up-to-date according to clinical guidelines and practice.
<b>Measure Title:</b>	Breast Cancer Screening
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	2372 (previously not applicable)/112
<b>CMS E-Measure ID:</b>	CMS125v5
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Claims, Web Interface, Registry, EHR, Measures Group
<b>Current Measure Description:</b>	Percentage of women 40-69 years of age who had a mammogram to screen for breast cancer
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise Measures description to read: Percentage of women 50-74 years of age who had a mammogram to screen for breast cancer</li> <li>Add NQF # 2372 which was not previously applicable</li> <li>Revise data submission method to remove Measures Group</li> </ul>
<b>Steward:</b>	National Committee on Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to change the measure description due to clinical guideline changes that occurred in 2013 which changed the age requirement for mammograms from 40-69 years to 50-74 years. CMS believes that this change does not change the intent of the measure but merely ensures the measure remains up-to-date according to clinical

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

	guidelines and practice. Additionally, in response to the finalized MIPS policy that no longer includes Measures Group, this measure is being removed from Measures Group as a data submission method. Furthermore, this measure has been recently endorsed by NQF with the updated age range. Therefore, CMS proposes to add the NQF #2372 to the measure.
<b>Measure Title:</b>	Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy -- Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%)
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0066/118
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Web Interface, Registry
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB therapy
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>• Revise data submission method to remove from the Web Interface</li> </ul>
<b>Steward:</b>	American College of Cardiology/ American Heart Association/ American Medical Association-Physician Consortium for Performance Improvement
<b>Rationale:</b>	CMS is finalizing its proposal to change the data submission method for this measure by removing it from the Web Interface. The Web Interface measure set contains measures for primary care and also includes relevant measures from the PCMH Core Measure Set established by the CQMC. This measure is not a measure in the PCMH Core Measure Set and is being finalized for removal from the Web Interface to align the Web Interface measure set with the PCMH Core Measure Set.
<b>Measure Title:</b>	Diabetes: Urine Protein Screening
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0062/119
<b>CMS E-Measure ID:</b>	CMS134v4
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Registry, EHR, Measures Group
<b>Current Measure Description:</b>	The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>• Revise measure title to read: Diabetes: Medical Attention for Nephropathy</li> <li>• Revise data submission method to remove Measures Group</li> </ul>
<b>Steward:</b>	National Committee for Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to revise the title of this measure to align with the measure's intent to increase reporting clarity and to match the NQF endorsed measure's title. Additionally, in response to the finalized MIPS policy that no longer includes Measures Group, this measure is being removed from Measures Group as a data submission method.
<b>Measure Title:</b>	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0421/128
<b>CMS E-Measure ID:</b>	CMS69v5
<b>National Quality Strategy Domain:</b>	Community/Population Health
<b>Current Data</b>	Claims, Web Interface, Registry, Measures Group

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

<b>submission Method:</b>	
<b>Measure Description:</b>	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous six months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous six months of the current encounter  Normal Parameters: -Age 65 years and older BMI => 23 and < 30 kg/m2 -Age 18 - 64 years BMI => 18.5 and < 25 kg/m2
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Remove upper parameter from measure description. Revise description to read: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous six months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous six months of the current encounter Normal Parameters: Age 18 - 64 years BMI =&gt; 18.5 and &lt; 25 kg/m2</li> <li>Revise data submission method to remove Measures Group</li> </ul>
<b>Steward:</b>	Centers for Medicare & Medicaid Services/ Mathematica/ Quality Insights of Pennsylvania
<b>Rationale:</b>	CMS is finalizing its proposal to remove the upper parameter from the measure description to align with the recommendations of technical expert panel and clinical expertise. Additionally, in response to the finalized MIPS policy that no longer includes Measures Group, this measure is being removed from Measures Group as a data submission method.
<b>Measure Title:</b>	Documentation of Current Medications in the Medical Record
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0419/130
<b>CMS E-Measure ID:</b>	CMS68v6
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Data submission Method:</b>	Claims, Web Interface, Registry, EHR, Measures Group
<b>Measure Description:</b>	Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise data submission method to remove from the Web Interface and Measures Group. Measure will remain reportable via Claims, EHR, and Registry</li> </ul>
<b>Steward:</b>	Centers for Medicare & Medicaid Services/ Mathematica/ Quality Insights of Pennsylvania
<b>Rationale:</b>	CMS is finalizing its proposal to revise the data submission method of this measure to remove it from use in the Web Interface. This measure is being replaced in the Web Interface with the core measure, PQRS #46: Medication Reconciliation Post-Discharge. Since these measures cover similar topic areas, CMS proposes to remove this measure from the Web Interface. Additionally, in response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being removed from Measures Group.
<b>Measure Title:</b>	Preventive Care and Screening: Screening for Clinical Depression and Follow-Up Plan
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0418/134
<b>CMS E-Measure ID:</b>	CMS2v6
<b>National Quality Strategy Domain:</b>	Community/Population Health
<b>Current Data submission Method:</b>	Claims, Web Interface, Registry, EHR, Measures Group

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

<b>Measure Description:</b>	Percentage of patients aged 12 years and older screened for clinical depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise measure title to read: Preventive Care and Screening: Screening for Depression and Follow-Up Plan</li> <li>Revise measure description to read: Percentage of patients aged 12 years and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen</li> <li>Revise data submission method to remove from Measures Group</li> </ul>
<b>Steward:</b>	Centers for Medicare & Medicaid Services/ Mathematica/ Quality Insights of Pennsylvania
<b>Rationale:</b>	CMS is finalizing its proposal to revise the title and measure description to align with the recommendations of the technical expert panel and clinical expertise in the field. CMS believes the revision provides clarity to providers when reporting depression screening and follow-up. Additionally, in response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being removed from Measures Group.
<b>Measure Title:</b>	HIV/AIDS: Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0405/160
<b>CMS E-Measure ID:</b>	52v5
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	EHR, Measures Group
<b>Measure Description:</b>	Percentage of patients aged 6 weeks and older with a diagnosis of HIV/AIDS who were prescribed Pneumocystis Jiroveci Pneumonia (PCP) prophylaxis
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change data submission method to remove Measures Group and have this measure be reportable as EHR only</li> </ul>
<b>Steward:</b>	National Committee for Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to change the data submission method for this measure from Measures Group to EHR only. As part of a measures group, this measure was part of a metric that provided relevant content for a specific condition. Additionally, in response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being removed from Measures Group.
<b>Measure Title:</b>	Diabetes: Foot Exam
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0056/163
<b>CMS E-Measure ID:</b>	CMS123v5
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	EHR
<b>Current Measure Description:</b>	Percentage of patients aged 18-75 years of age with diabetes who had a foot exam during the measurement period
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise measure description to read: Percentage of patients 18-75 years of age with diabetes (type 1 and type 2) who received a foot exam (visual inspection and sensory exam with mono filament and a pulse exam) during the measurement year</li> </ul>
<b>Steward:</b>	National Committee for Quality Assurance
<b>Rationale:</b>	CMS is finalizing the measure description as written above to improve clarity for providers about what constitutes a foot exam. CMS believes this change does not change the intent

The document published in the Federal Register is the official HHS-approved document.

	of the measure, but merely provides clarity in response to providers' feedback. Additionally, CMS received a comment that the measure description as proposed was not consistent with other measure descriptions with "the" preceding the word "percentage". CMS is correcting the description by removing the word "the" from the beginning of the measure description.
<b>Measure Title:</b>	Coronary Artery Bypass Graft (CABG): Deep Sternal Wound Infection Rate
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0130/165
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Measures Group
<b>Measure Description:</b>	Percentage of patients aged 18 years and older undergoing isolated CABG surgery who, within 30 days postoperatively, develop deep sternal wound infection involving muscle, bone, and/or mediastinum requiring operative intervention
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change data submission method from Measures Group only to Registry</li> </ul>
<b>Steward:</b>	Society of Thoracic Surgeons
<b>Rationale:</b>	CMS is finalizing its proposal to change the reporting mechanism for this measure from Measures Group only to Registry only. As part of a measures group, this measure was part of a metric that provided relevant content for a specific condition. Additionally, in response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being finalized as an individual measure. CMS believes this measure continues to address a clinical performance gap even if it is reported as an individual measure.
<b>Measure Title:</b>	Coronary Artery Bypass Graft (CABG): Stroke
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0131/166
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Measures Group
<b>Measure Description:</b>	Percentage of patients aged 18 years and older undergoing isolated CABG surgery who have a postoperative stroke (i.e., any confirmed neurological deficit of abrupt onset caused by a disturbance in blood supply to the brain) that did not resolve within 24 hours
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change data submission method from Measures Group only to Registry</li> </ul>

<b>Measure Title:</b>	Sleep Apnea: Positive Airway Pressure Therapy Prescribed
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/278
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Measures Group
<b>Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of moderate or severe obstructive sleep apnea who were prescribed positive airway pressure therapy
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change data submission method from Measures Group only to Registry</li> </ul>
<b>Steward:</b>	American Academy of Sleep Medicine/ American Medical Association-Physician Consortium for Performance Improvement
<b>Rationale:</b>	CMS is finalizing its proposal to change the data submission method for this measure from Measures Group only to Registry only. As part of a measures group, this measure was part of a metric that provided relevant content for a specific condition. Additionally, in response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being finalized as an individual measure. CMS believes this measure continues to address a clinical performance gap even if it is reported as an individual measure.
<b>Measure Title:</b>	Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/279
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Measures Group
<b>Measure Description:</b>	Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea who were prescribed positive airway pressure therapy who had documentation that adherence to positive airway pressure therapy was objectively measured

	of a metric that provided relevant content for a specific condition In response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being finalized as an individual measure. CMS believes this measure continues to address a clinical performance gap even if it is reported as an individual measure. Additionally, CMS proposes to change this measure type designation from outcome measure to process measure. This measure was previously finalized in PQRS as an outcome measure. However, upon further review and analysis, CMS proposes to revise the classification of this measure to process measure in order to match the clinical action of communicating treatment options.
<b>Measure Title:</b>	Cervical Cancer Screening
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0032/309
<b>CMS E-Measure ID:</b>	CMS124v5
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	EHR
<b>Current Measure Description:</b>	Percentage of women 21-64 years of age, who received one or more Pap tests to screen for cervical cancer
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>• Revise Measure description to read: Percentage of women 21–64 years of age who were screened for cervical cancer using either of the following criteria:                             <ul style="list-style-type: none"> <li>- Women age 21–64 who had cervical cytology performed every 3 years</li> <li>- Women age 30–64 who had cervical cytology/human papillomavirus (HPV) co-testing performed every 5 years</li> </ul> </li> </ul>
<b>Steward:</b>	National Committee on Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to change the measure description of this measure to align with measure intent and 2012 USPSTF recommendation: U.S. Preventive Services Task Force. 2012. "Screening for Cervical Cancer: U.S. Preventive Services Task Force Recommendation Statement." Ann Intern Med. 156(12):880-91.
<b>Measure Title:</b>	Preventive Care and Screening: Screening for High Blood Pressure and Follow-up Documented
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/317
<b>CMS E-Measure ID:</b>	CMS22v5
<b>National Quality Strategy Domain:</b>	Community/Population Health
<b>Current Data submission Method:</b>	Claims, Web Interface, Registry, EHR, Measures Group
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older seen during the reporting period who were screened for high blood pressure AND a recommended follow-up plan is documented based on the current blood pressure (BP) reading as indicated.
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>• Revise data submission method to remove from Web Interface and Measures Group</li> </ul>
<b>Steward:</b>	Centers for Medicare & Medicaid Services/ Mathematica/ Quality Insights of Pennsylvania
<b>Rationale:</b>	CMS is finalizing its proposal a change to the data submission method for this measure and remove it from the Web Interface. The Web Interface measure set contains measures for primary care and also includes relevant measures from the PCMH Core Measure Set established by the CQMC. This measure is not a core measure and is being removed to align the Web Interface measure set with the PCMH Core Measure Set. Additionally, in response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being removed from Measures Group.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

<b>Measure Title:</b>	Pediatric Kidney Disease: Adequacy of Volume Management
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/327
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Registry
<b>Measure Description:</b>	Percentage of calendar months within a 12-month period during which patients aged 17 years and younger with a diagnosis of End Stage Renal Disease (ESRD) undergoing maintenance hemodialysis in an outpatient dialysis facility have an assessment of the adequacy of volume management from a nephrologist.
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change measure type from outcome measure to process measure</li> </ul>
<b>Steward:</b>	Renal Physicians Association
<b>Rationale:</b>	CMS is finalizing its proposal to change this measure type designation from outcome measure to process measure. This measure was previously finalized in PQRS as an outcome measure. However, upon further review and analysis, CMS understands this measure to be a percentage of documented assessment rather than a health outcome. Therefore, CMS believes the classification of this measure to be a process measure.
<b>Measure Title:</b>	HIV Viral Load Suppression
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	2082/338
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Measures Group
<b>Measure Description:</b>	The percentage of patients, regardless of age, with a diagnosis of HIV with a HIV viral load less than 200 copies/mL at last HIV viral load test during the measurement year
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change data submission method from Measures Group only to Registry</li> </ul>
<b>Steward:</b>	Health Resources and Services Administration
<b>Rationale:</b>	CMS is finalizing its proposal to change the data submission method for this measure from Measures Group only to Registry only. As part of a measures group, this measure was part of a metric that provided relevant content for a specific condition. In response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being finalized as an individual measure. CMS believes this measure continues to address a clinical performance gap even if it is reported as an individual measure.
<b>Measure Title:</b>	HIV Medical Visit Frequency
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	2079/340
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Data submission Method:</b>	Measures Group
<b>Measure Description:</b>	Percentage of patients, regardless of age with a diagnosis of HIV who had at least one medical visit in each 6-month period of the 24 month measurement period, with a minimum

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. <b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Data submission Method:</b>	Measures Group
<b>Measure Description:</b>	Percentage of final reports for computed tomography (CT) imaging studies of the thorax for patients aged 18 years and older with documented follow-up recommendations for incidentally detected pulmonary nodules (e.g., follow-up CT imaging studies needed or that no follow-up is needed) based at a minimum on nodule size AND patient risk factors
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change data submission method from Measures Group only to Registry</li> </ul>
<b>Steward:</b>	American College of Radiology
<b>Rationale:</b>	CMS is finalizing its proposal to change the reporting mechanism for this measure from Measures Group only to Registry only. As part of a measures group, this measure was part of a metric that provided relevant content for a specific condition. In response to the finalized MIPS policy to no longer include Measures Group as a data submission method, this measure is being finalized as an individual measure. CMS believes this measure continues to address a clinical performance gap even if it is reported as an individual measure.
<b>Measure Title:</b>	Depression Remission at Twelve Months
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	0710/370
<b>CMS E-Measure ID:</b>	CMS159v5
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Web interface, Registry, EHR
<b>Measure Description:</b>	Adult patients age 18 and older with major depression or dysthymia and an initial PHQ-9 score > 9 who demonstrate remission at twelve months defined as PHQ-9 score less than 5. This measure applies to both patients with newly diagnosed and existing depression whose current PHQ-9 score indicates a need for treatment
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise measure description to read: Patients age 18 and older with major depression or dysthymia and an initial Patient Health Questionnaire (PHQ-9) score greater than nine who demonstrate remission at twelve months (+/- 30 days after an index visit) defined as a PHQ-9 score less than five. This measure applies to both patients with newly diagnosed and existing depression whose current PHQ-9 score indicates a need for treatment.</li> <li>Change measure type from intermediate outcome measure to outcome measure</li> </ul>
<b>Steward:</b>	Minnesota Community Measurement
<b>Rationale:</b>	CMS is finalizing its proposal to revise the measure description to provide clarity for reporting. This does not change the intent of the measure but merely provides clarity to ensure consistent reporting for eligible clinicians. Additionally, CMS is finalizing its proposal to change this measure type designation from intermediate outcome measure to outcome measure. This measure was previously finalized in PQRS as an intermediate outcome measure. However, upon further review and analysis, CMS believes the classification of this measure to be an outcome measure in order to match the outcome of depression remission.
<b>Measure Title:</b>	Functional Status Assessment for Knee Replacement
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/375
<b>CMS E-Measure ID:</b>	CMS66v5

<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Data submission Method:</b>	EHR
<b>Measure Description:</b>	Percentage of patients aged 18 years and older with primary total knee arthroplasty (TKA) who completed baseline and follow-up (patient-reported) functional status assessments.
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise measure title to read: Functional Status Assessment for Total Knee Replacement</li> <li>Revise measure description to read: Percentage of patients 18 years of age and older with primary total knee arthroplasty (TKA) who completed baseline and follow-up patient-reported functional status assessments</li> </ul>
<b>Steward:</b>	Centers for Medicare & Medicaid Services/ National Committee for Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to revise the title and description of the measure to align with the intent of the measure. This does not change the intent of the measure but merely provides clarity to ensure consistent reporting for eligible clinicians.
<b>Measure Title:</b>	Functional Status Assessment for Hip Replacement
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/376
<b>CMS E-Measure ID:</b>	CMS56v5
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Data submission Method:</b>	EHR
<b>Measure Description:</b>	Percentage of patients aged 18 years and older with primary total hip arthroplasty (THA) who completed baseline and follow-up (patient-reported) functional status assessments
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise title to read: Functional Status Assessment for Total Hip Replacement</li> <li>Revise measure description to read: Percentage of patients 18 years of age and older with primary total hip arthroplasty (THA) who completed baseline and follow-up (patient-reported) functional status assessments</li> </ul>
<b>Steward:</b>	Centers for Medicare & Medicaid Services/ National Committee for Quality Assurance
<b>Rationale:</b>	CMS is finalizing its proposal to revise the title and description of the measure to align with the intent of the measure. This change does not change the intent of the measure but merely provides clarity to ensure consistent reporting for eligible clinicians.
<b>Measure Title:</b>	Functional Status Assessment for Complex Chronic Conditions
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/377
<b>CMS E-Measure ID:</b>	CMS90v6
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Data submission Method:</b>	EHR
<b>Measure Description:</b>	Percentage of patients aged 65 years and older with heart failure who completed initial and follow-up patient-reported functional status assessments
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Revise measure title to read: Functional Status Assessments for Patients with Congestive Heart Failure</li> <li>Revise measure description to read: Percentage of patients 65 years of age and older with congestive heart failure who completed initial and follow-up patient-reported functional status assessments</li> </ul>
<b>Steward:</b>	Centers for Medicare & Medicaid Services/ Mathematica
<b>Rationale:</b>	CMS is finalizing its proposal to revise the title and description of the measure to add clarity

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. This document may vary slightly from the official published document if minor editorial changes have been made during the OFR review process. The document published in the Federal Register is the official HHS-approved document.

	in response to provider feedback. This does not change the intent of the measure but merely provides clarity to ensure consistent reporting for eligible clinicians. CMS received a comment that believes this measure is based on outdated evidence and should not be included in the program. Although there are a few studies listed in the scientific statement that support the use of patient-reported health status assessments, the AHA determined that there is limited evidence on how physicians should use these tools in clinical practice (Rumsfeld, 2013). Since there is a need for further research and because there was not enough evidence to determine best practices for implementing and interpreting patient-reported health assessments in clinical practice, CMS will implement the measure as proposed.
<b>Measure Title:</b>	Varicose Vein Treatment with Saphenous Ablation: Outcome Survey
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/420
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Registry
<b>Current Measure Description:</b>	Percentage of patients treated for varicose veins (CEAP C2-S) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease specific patient reported outcome survey instrument after treatment.
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change measure type from process measure to outcome measure</li> </ul>
<b>Steward:</b>	Society of Interventional Radiology
<b>Rationale:</b>	CMS is finalizing its proposal to change this measure type designation from process measure to outcome measure. This measure was previously finalized in PQRS as a process measure. However, upon further review and analysis of the measure specification, CMS is finalizing its proposal to revise the classification of this measure to outcome measure because it assesses improvement on a patient reported outcome survey instrument.
<b>Measure Title:</b>	Appropriate Assessment of Retrievable Inferior Vena Cava Filters for Removal
<b>MIPS ID Number:</b>	N/A
<b>NQF/PQRS #:</b>	N/A/421
<b>CMS E-Measure ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Data submission Method:</b>	Registry
<b>Current Measure Description:</b>	Percentage of patients in whom a retrievable IVC filter is placed who, within 3 months post-placement, have a documented assessment for the appropriateness of continued filtration, device removal or the inability to contact the patient with at least two attempts
<b>Finalized Substantive Change</b>	<ul style="list-style-type: none"> <li>Change measure type from outcome measure to process measure</li> </ul>
<b>Steward:</b>	Society of Interventional Radiology
<b>Rationale:</b>	CMS is finalizing its proposal to change this measure type designation from outcome measure to process measure. This measure was previously finalized in PQRS as an outcome measure. However, upon further review and analysis of the measure specification, CMS is finalizing its proposal to revise the classification of this measure to process measure in order to match the clinical action of appropriate care assessment.

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. 	identify services due; Use reminders and outreach (e.g., phone calls, emails, postcards, patient portals and community health workers where available) to alert and educate patients about services due; and/or Routine medication reconciliation.		
Population Management	Provide longitudinal care management to patients at high risk for adverse health outcome or harm that could include one or more of the following: Use a consistent method to assign and adjust global risk status for all empaneled patients to allow risk stratification into actionable risk cohorts. Monitor the risk-stratification method and refine as necessary to improve accuracy of risk status identification; Use a personalized plan of care for patients at high risk for adverse health outcome or harm, integrating patient goals, values and priorities; and/or Use on-site practice-based or shared care managers to proactively monitor and coordinate care for the highest risk cohort of patients.	Medium	*
Population Management	Provide episodic care management, including management across transitions and referrals that could include one or more of the following: Routine and timely follow-up to hospitalizations, ED visits and stays in other institutional settings, including symptom and disease management, and medication reconciliation and management; and/or Managing care intensively through new diagnoses, injuries and exacerbations of illness.	Medium	*
Population Management	Manage medications to maximize efficiency, effectiveness and safety that could include one or more of the following: Reconcile and coordinate medications and provide medication management across transitions of care settings and eligible clinicians or groups; Integrate a pharmacist into the care team; and/or Conduct periodic, structured medication reviews.	Medium	*
Care Coordination	Performance of regular practices that include providing specialist reports back to the referring MIPS eligible clinician or group to close the referral loop or where	Medium	*

	the referring MIPS eligible clinician or group initiates regular inquiries to specialist for specialist reports which could be documented or noted in the certified EHR technology.		
Care Coordination	Timely communication of test results defined as timely identification of abnormal test results with timely follow-up.	Medium	
Care Coordination	Implementation of at least one additional recommended activity from the Quality Innovation Network-Quality Improvement Organization after technical assistance has been provided related to improving care coordination.	Medium	
Care Coordination	Participation in the CMS Transforming Clinical Practice Initiative.	High	
Care Coordination	Membership and participation in a CMS Partnership for Patients Hospital Engagement Network.	Medium	
Care Coordination	Participation in a Qualified Clinical Data Registry, demonstrating performance of activities that promote use of standard practices, tools and processes for quality improvement (e.g., documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups).	Medium	
Care Coordination	Implementation of regular care coordination training.	Medium	
Care Coordination	Implementation of practices/processes that document care coordination activities (e.g., a documented care coordination encounter that tracks all clinical staff involved and communications from date patient is scheduled for outpatient procedure through day of procedure).	Medium	*
Care Coordination	Implementation of practices/processes to develop regularly updated individual care plans for at-risk patients that are shared with the beneficiary or caregiver(s).	Medium	*
Care Coordination	Implementation of practices/processes for care transition that include documentation of how a MIPS eligible clinician or group carried out a patient-centered action plan for first 30 days following a discharge (e.g., staff involved, phone calls conducted in support of transition, accompaniments, navigation actions, home visits, patient information access, etc.).	Medium	
Care Coordination	Establish standard operations to manage transitions of care that could include one or more of the following:	Medium

Subcategory	Activity	Weighting	Eligible for Advancing Care Information Bonus (Designated with asterisk * if eligible)
	Provide a guide to available community resources.		
Beneficiary Engagement	In support of improving patient access, performing additional activities that enable capture of patient reported outcomes (e.g., home blood pressure, blood glucose logs, food diaries, at-risk health factors such as tobacco or alcohol use, etc.) or patient activation measures through use of certified EHR technology, containing this data in a separate queue for clinician recognition and review.	Medium	*
Beneficiary Engagement	Participation in a QCDR, demonstrating performance of activities that promote implementation of shared clinical decision making capabilities.	Medium	
Beneficiary Engagement	Engagement with a Quality Innovation Network-Quality Improvement Organization, which may include participation in self-management training programs such as diabetes.	Medium	
Beneficiary Engagement	Access to an enhanced patient portal that provides up to date information related to relevant chronic disease health or blood pressure control, and includes interactive features allowing patients to enter health information and/or enables bidirectional communication about medication changes and adherence.	Medium	*
Beneficiary Engagement	Enhancements and ongoing regular updates and use of websites/tools that include consideration for compliance with section 508 of the Rehabilitation Act of 1973 or for improved design for patients with cognitive disabilities. Refer to the CMS website on section 508 of the Rehabilitation Act <a href="https://www.cms.gov/Research-Statistics-Data-and-Systems/CMS-Information-Technology/Section508/index.html?redirect=/InfoTechGenInfo/07_Section508.asp">https://www.cms.gov/Research-Statistics-Data-and-Systems/CMS-Information-Technology/Section508/index.html?redirect=/InfoTechGenInfo/07_Section508.asp</a> that requires that institutions receiving federal funds solicit, procure, maintain and use all electronic and information technology (EIT) so that equal or alternate/comparable access is given to members of the public with and without disabilities. For example, this includes designing a patient portal or website that is compliant with section 508 of the Rehabilitation Act of 1973.	Medium	
Beneficiary	Collection and follow-up on patient experience and	High

Engagement	satisfaction data on beneficiary engagement, including development of improvement plan.		
Beneficiary Engagement	Participation in a QCDR, that promotes use of patient engagement tools.	Medium	
Beneficiary Engagement	Participation in a QCDR, that promotes collaborative learning network opportunities that are interactive.	Medium	
Beneficiary Engagement	Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement.	Medium	
Beneficiary Engagement	Participation in a QCDR, that promotes implementation of patient self-action plans.	Medium	
Beneficiary Engagement	Participation in a QCDR, that promotes use of processes and tools that engage patients for adherence to treatment plan.	Medium	
Beneficiary Engagement	Participation in a QCDR, that promotes use of processes and tools that engage patients for adherence to treatment plan.	Medium	
Beneficiary Engagement	Use evidence-based decision aids to support shared decision-making.	Medium	
Beneficiary Engagement	Regularly assess the patient experience of care through surveys, advisory councils, and/or other mechanisms.	Medium	
Beneficiary Engagement	Engage patients and families to guide improvement in the system of care.	Medium	
Beneficiary Engagement	Engage patients, family and caregivers in developing a plan of care and prioritizing their goals for action, documented in the certified EHR technology.	Medium	*
Beneficiary Engagement	Incorporate evidence-based techniques to promote self-management into usual care, using techniques such as goal setting with structured follow-up, teach back, action planning or motivational interviewing.	Medium	
Beneficiary Engagement	Use tools to assist patients in assessing their need for support for self-management (e.g., the Patient Activation Measure or How's My Health).	Medium	
Beneficiary Engagement	Provide peer-led support for self-management.	Medium	
Beneficiary Engagement	Use group visits for common chronic conditions (e.g., diabetes).	Medium	
Beneficiary Engagement	Provide condition-specific chronic disease self-management support programs or coaching or link patients to those programs in the community.	Medium	
Beneficiary Engagement	Provide self-management materials at an appropriate literacy level and in an appropriate language.	Medium	*
Beneficiary Engagement	Provide a pre-visit development of a shared visit agenda with the patient.	Medium

Subcategory	Activity	Weighting	Eligible for Advancing Care Information Bonus (Designated with asterisk * if eligible)
Beneficiary Engagement	Provide coaching between visits with follow-up on care plan and goals.	Medium	
Patient Safety and Practice Assessment	Participation in an AHRQ-listed patient safety organization.	Medium	
Patient Safety and Practice Assessment	Participation in Maintenance of Certification Part IV for improving professional practice including participation in a local, regional or national outcomes registry or quality assessment program. Performance of activities across practice to regularly assess performance in practice, by reviewing outcomes addressing identified areas for improvement and evaluating the results.	Medium	
Patient Safety and Practice Assessment	For eligible professionals not participating in Maintenance of Certification (MOC) Part IV, new engagement for MOC Part IV, such as IHI Training/Forum Event; National Academy of Medicine, AHRQ Team STEPPS®.	Medium	
Patient Safety and Practice Assessment	Administration of the AHRQ Survey of Patient Safety Culture and submission of data to the comparative database (refer to AHRQ Survey of Patient Safety Culture website <a href="http://www.ahrq.gov/professionals/quality-patient-safety/patientsafetyculture/index.html">http://www.ahrq.gov/professionals/quality-patient-safety/patientsafetyculture/index.html</a> )	Medium	
Patient Safety and Practice Assessment	Annual registration by eligible clinician or group in the prescription drug monitoring program of the state where they practice. Activities that simply involve registration are not sufficient. MIPS eligible clinicians and groups must participate for a minimum of 6 months.	Medium	
Patient Safety and Practice Assessment	Clinicians would attest that 60 percent for the first year, or 75 percent for the second year, of consultation of prescription drug monitoring program prior to the issuance of a Controlled Substance Schedule II (CSII) opioid prescription that lasts for longer than 3 days.	High	
Patient Safety and Practice Assessment	Use of QCDR data, for ongoing practice assessment and improvements in patient safety.	Medium	
Patient Safety and Practice Assessment	Use of tools that assist specialty practices in tracking specific measures that are meaningful to their practice, such as use of the Surgical Risk Calculator.	Medium	
Patient Safety and Practice Assessment	Completion of the American Medical Association’s STEPS Forward program.	Medium	

**Notice:** This HHS-approved document has been submitted to the Office of the Federal Register (OFR) for publication and has not yet been placed on public display or published in the Federal Register. Subcategory	Activity	Weighting	Eligible for Advancing Care Information Bonus (Designated with asterisk * if eligible)
Patient Safety and Practice Assessment	Completion of training and obtaining an approved waiver for provision of medication -assisted treatment of opioid use disorders using buprenorphine.	Medium	
Patient Safety and Practice Assessment	Participation in the Consumer Assessment of Healthcare Providers and Systems Survey or other supplemental questionnaire items (e.g., Cultural Competence or Health Information Technology supplemental item sets).	High	
Patient Safety and Practice Assessment	Participation in designated private payer clinical practice improvement activities.	Medium	
Patient Safety and Practice Assessment	Participation in Joint Commission Ongoing Professional Practice Evaluation initiative.	Medium	
Patient Safety and Practice Assessment	Participation in other quality improvement programs such as Bridges to Excellence.	Medium	
Patient Safety and Practice Assessment	Implementation of an antibiotic stewardship program that measures the appropriate use of antibiotics for several different conditions (URI Rx in children, diagnosis of pharyngitis, Bronchitis Rx in adults) according to clinical guidelines for diagnostics and therapeutics.	Medium	
Patient Safety and Practice Assessment	Use decision support and standardized treatment protocols to manage workflow in the team to meet patient needs.	Medium	*
Patient Safety and Practice Assessment	Build the analytic capability required to manage total cost of care for the practice population that could include one or more of the following: Train appropriate staff on interpretation of cost and utilization information; and/or Use available data regularly to analyze opportunities to reduce cost through improved care.	Medium	
Patient Safety and Practice Assessment	Measure and improve quality at the practice and panel level that could include one or more of the following: Regularly review measures of quality, utilization, patient satisfaction and other measures that may be useful at the practice level and at the level of the care team or MIPS eligible clinician or group(panel); and/or Use relevant data sources to create benchmarks	Medium

Subcategory	Activity	Weighting	Eligible for Advancing Care Information Bonus (Designated with asterisk * if eligible)
Achieving Health Equity	Participation in a QCDR, demonstrating performance of activities for use of standardized processes for screening for social determinants of health such as food security, employment and housing. Use of supporting tools that can be incorporated into the certified EHR technology is also suggested.	Medium	*
Achieving Health Equity	Participation in a QCDR, demonstrating performance of activities for promoting use of patient-reported outcome (PRO) tools and corresponding collection of PRO data (e.g., use of PQH-2 or PHQ-9 and PROMIS instruments).	Medium	
Achieving Health Equity	Participation in a QCDR, demonstrating performance of activities for use of standard questionnaires for assessing improvements in health disparities related to functional health status (e.g., use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment).	Medium	
Emergency Response and Preparedness	Participation in Disaster Medical Assistance Teams, or Community Emergency Responder Teams. Activities that simply involve registration are not sufficient. MIPS eligible clinicians and MIPS eligible clinician groups must be registered for a minimum of 6 months as a volunteer for disaster or emergency response.	Medium	
Emergency Response and Preparedness	Participation in domestic or international humanitarian volunteer work. Activities that simply involve registration are not sufficient. MIPS eligible clinicians and groups attest to domestic or international humanitarian volunteer work for a period of a continuous 60 days or greater.	High	
Integrated Behavioral and Mental Health	Diabetes screening for people with schizophrenia or bipolar disease who are using antipsychotic medication.	Medium	
Integrated Behavioral and Mental Health	Tobacco use: Regular engagement of MIPS eligible clinicians or groups in integrated prevention and treatment interventions, including tobacco use screening and cessation interventions (refer to NQF #0028) for patients with co-occurring conditions of behavioral or mental health and at risk factors for tobacco dependence.	Medium	
Integrated Behavioral and	Unhealthy alcohol use: Regular engagement of MIPS eligible clinicians or groups in integrated prevention	Medium
